## Cloud is not far away thanks to easy and intuitive function setup

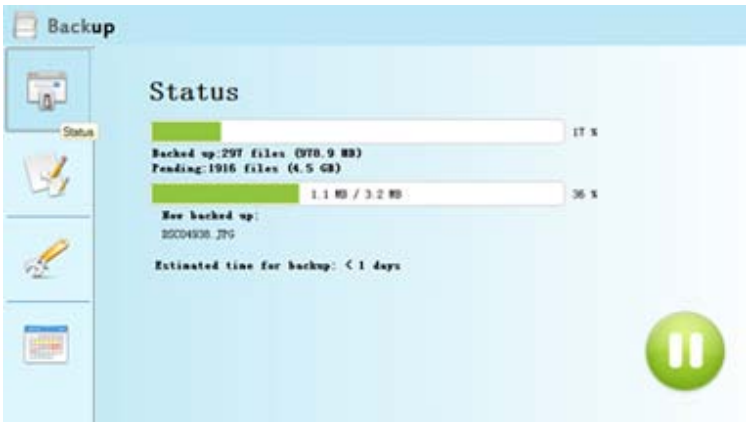
ASUS WebStorage provides data backup, file sharing, and synchronization across multiple devices, such as cell phones, desktops, and laptops. Function setup is therefore very important but easy and intuitive enough to help you to get closer to cloud.

## Backup of your invaluable data on cloud

This is the easiest way to backup critical data, ensuring that nothing will be lost. Backup schedules can be arranged at the times most convenient to you to have data protected in your personal cloud. There is also an automatic backup option to effectively protect that files that have been changed or newly added. You are always able to choose the way you like to recover the data in cloud across devices.

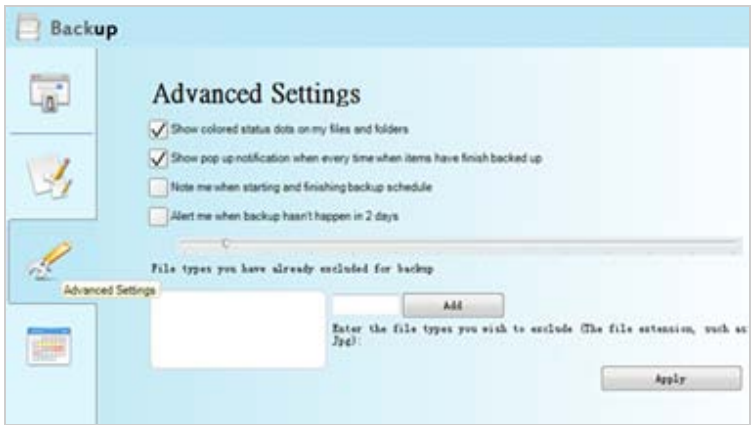
The backup setup interface provides a convenient view of the current backup status as well as newly added or deleted items. Moreover, there are advanced backup and manual schedule backup for advanced users.

The backup status displays what is being processed and how a single file is being backed up. The estimated time required for backup completion is also readily provided while backup can pause anytime to release necessary resources.

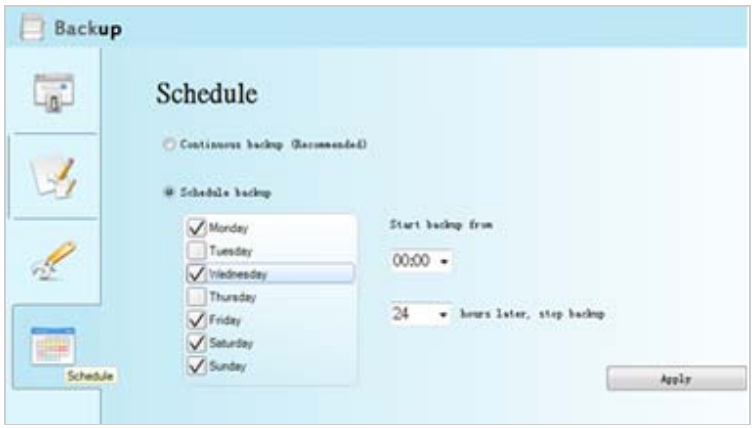


Be it managing the files backed up, file addition, or deletion, it is all very easy and simple.

The advanced setup function ensures timely backup when there is no Internet access as well as the exclusion of certain types of files from backup.



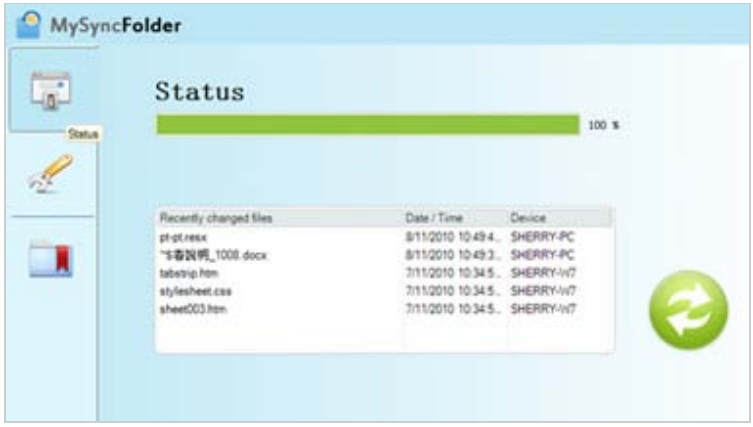
Manual schedule backup lets you back up your schedule and release your PC resources at anytime you want.



## MySyncFolder for smart mobility to carry data on the go

MySyncFolder is the best solution for you to carry the latest data with you by accessing such data via cell phone or PC anytime. Music, photos, texts, videos, and various files stored in MySyncFolder can be easily accessed and shared anytime and anywhere

MySyncFolder shows synchronization completion, including the five files that have been most recently synchronized and their device sources to keep you easily informed of the synchronization status.



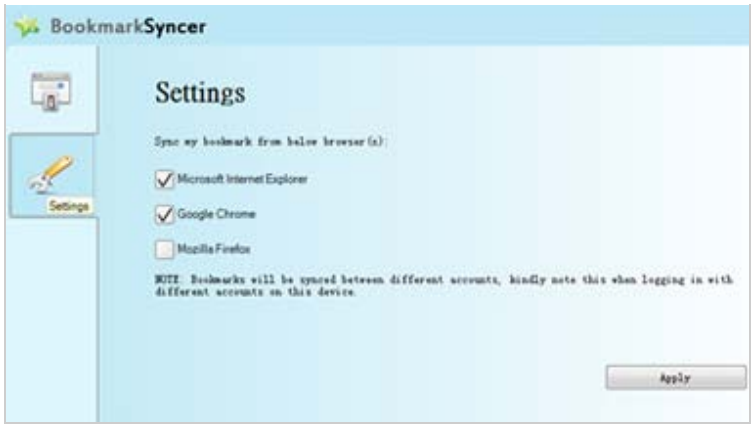
Advanced setup adjusts all the settings based on your preferences.
*Automatic synchronization is recommended to let us continue synchronizing your changes and automatically uploading them to your cloud.

The folder location enabled by automatic synchronization facilitates data search significantly.

## BookmarkSyncer for bookmarks on the go

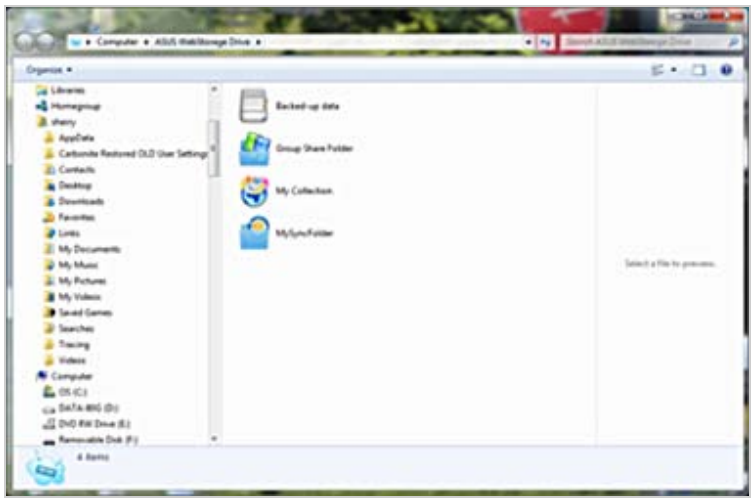
This is the most convenient bookmark synchronization function that

automatically stores all your favorite web pages in cloud and then have them synchronized in different devices. You are able to surf in the cyber world that you are already familiar with despite any hardware change or upgrade.
※ Microsoft Internet Explorer, Google Chrome, and Mozilla Firefox are supported.



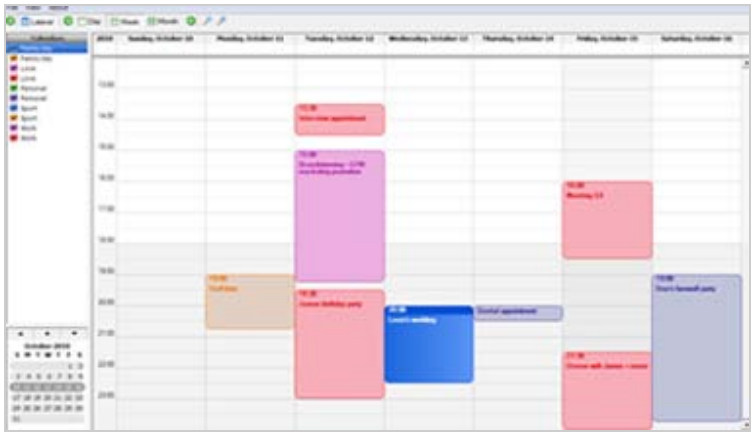
## Drive for easy management of data in cloud

Here you can access all your backups, synchronizations, group-sharing files, and encrypted folder. Each folder can be previewed before download, and short URL links are directly generated for sharing.



## Multiple cloud applications for easy enhancement of efficiency Calendar as a smart reminder to keep you informed of any important event

Calendars across devices are automatically synchronized and new events can be edited on any PC. Automatic cloud synchronization provided by ASUS WebStorage frees you from the inconvenience of repeated editing, and the thoughtful reminder mechanism prevents you from missing any appointments.



## Powerful mobility of ASUS WebStorage

In addition to your PC with ASUS WebStorage V3.0 installed, your cell phone apps and browser let you access your personal cloud when you are on the go to enable mobility and productivity at the same time.

### Go to Web to access cloud data across devices anywhere

At http://www.asuswebstorage.com/ you will enjoy your personal cloud to download and upload files, access online music and photos, display photo albums, conduct full text searches, convert and preview files, and share URLs. Your mobility needs and wants are satisfied anytime.

### Mobile App – Mobility plus to find the right applications for you on the go

Without physical connection to any PC, ASUS WebStorage Mobile App synchronizes the data in your different devices. Its unique key word and full text searches rapid find the files for preview and download. File transcoding enables easy access to music and photo there, and various file formats are supported for you to easily enjoy a convenient, rapid new lifestyle in cloud.
