4 Dimm :

• A* : Supports **one module** inserted in any slot as Single-channel memory configuration

• B* : Supports **one pair of modules** inserted into either the blue slots or the black slots as one pair of **Dual-channel** memory configuration

• C* : Supports **four modules** inserted into both the blue and black slots as two pairs of Dual-channel memory configuration

-When installing total memory of 4GB capacity or more, Windows 32-bit operation system may only recognize less than 3GB. Hence, a total installed memory of less than 3GB is recommended.

-It is recommended to install the memory modules from the **Blue** slots for better overlocking capability.

-The default DIMM frequency depends on its Serial Presence Detect (SPD), which is the standard way of accessing information from a memory module. Under the default state, some memory modules for overlocking may operate at a lower
