6 DIMM Slots

- **2 DIMM:** Supports two (2) modules inserted into slot A1 and B1 as one pair of Dual-channel memory configuration
- **3 DIMM:** Supports three (3) modules inserted into the **beige** slots (A1, B1 and C1) or the **brown** slots (A2, B2 and C2) as one set of Triple-channel memory configuration
- **4 DIMM:** Supports four (4) modules inserted into the **beige** slots (A1, B1 and C1) and the **brown** slot A2 as one set of Triple-channel memory configuration
- **6 DIMM:** Supports six (6) modules inserted into both the **beige** slots and the **brown** slots as two set of Triple-channel memory configuration.

- When installing total memory of 4GB capacity or more, Windows 32-bit operation system may only recognize less than 3GB. Hence, a total installed memory of less than 3GB is recommended.

- It is recommended to install the memory modules from the **beige** slots for better compatibility.

- The default DIMM frequency depends on its Serial Presence Detect (SPD), which is the standard way of accessing information from a memory module. Under the default state, some memory modules for overclocking may operate at a lower frequency than the vendor-marked value.
