

# ASUS Splendid

ASUS Splendid Video Enhancement Technology brings your video viewing experience on your PC to the next level. With ASUS Splendid, you can fast change the color effects and optimize image quality for the best visual results.

For more information about ASUS Splendid setup, refer the support CD.

## Launching ASUS Splendid

You can launch ASUS Splendid right after installation or anytime from the Windows® desktop.

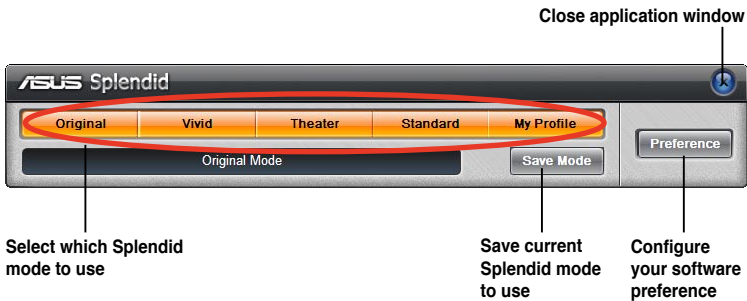

To launch the ASUS Splendid utility from the Windows® desktop, click **Start > All Programs > ASUS > ASUS Splendid x.x.x > Splendid**. The ASUS Splendid main window appears.

After launching the application, the ASUS Splendid icon appears in the Windows® taskbar. Click this icon to close or restore the application.

## Using ASUS Splendid

Knowing the ASUS Splendid main window:

## Using a predefined Splendid mode

In the main window, you can select from four predefined Splendid modes: **Original**, **Vivid**, **Theater**, and **Standard**. Refer to the table below for descriptions about different modes.

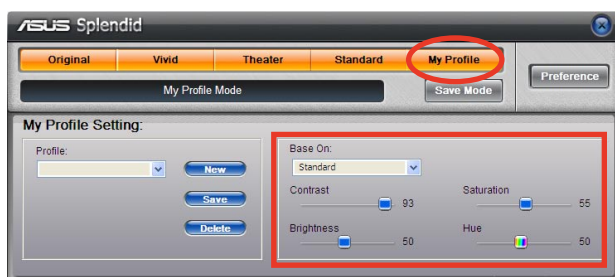

## Splendid Mode Table

Mode	Description
Original	Maintains the original display color settings.
Vivid	Enhances saturation and contrast for a more saturated color. Recommended for home entertainment or photo viewing.
Theater	Provides softer contrast and maintains original saturation for a theater-like effect. Recommended for video playback.
Standard	Provides balanced user comforts and color enrichment. Recommended for long-time documentation viewing and web-browsing.

## Creating a user-defined Splendid mode

You can define your own Splendid mode by creating a new profile or modifying an existing one.

To create a profile, click the **My Profile** tab on the main window to display the **My Profile Setting** sub-menu.

You can adjust **Contrast**, **Saturation**, **Brightness**, and **Hue** by dragging the bars.

The four items are configurable in RGB output only.

## Other ASUS Splendid options

From the main window, you can also configure other settings by clicking the **Preference** tab to display the **Preference** sub-menu.
