## Federal Communications Commission Statement

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- This device may not cause harmful interference, and
- This device must accept any interference received including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with manufacturer's instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

> The use of shielded cables for connection of the monitor to the graphics card is required to assure compliance with FCC regulations. Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

## Canadian Department of Communications Statement

This digital apparatus does not exceed the Class B limits for radio noise emissions from digital apparatus set out in the Radio Interference Regulations of the Canadian Department of Communications.

This class B digital apparatus complies with Canadian ICES-003.

# Safety information

## Electrical safety

- To prevent electrical shock hazard, disconnect the power cable from the electrical outlet before relocating the system.

- When adding or removing devices to or from the system, ensure that the power cables for the devices are unplugged before the signal cables are connected. If possible, disconnect all power cables from the existing system before you add a device.

- Before connecting or removing signal cables from the motherboard, ensure that all power cables are unplugged.

- Seek professional assistance before using an adapter or extension cord. These devices could interrupt the grounding circuit.

- Make sure that your power supply is set to the correct voltage in your area. If you are not sure about the voltage of the electrical outlet you are using, contact your local power company.

- If the power supply is broken, do not try to fix it by yourself. Contact a qualified service technician or your retailer.

## Operation safety

- Before installing the motherboard and adding devices on it, carefully read all the manuals that came with the package.

- Before using the product, make sure all cables are correctly connected and the power cables are not damaged. If you detect any damage, contact your dealer immediately.

- To avoid short circuits, keep paper clips, screws, and staples away from connectors, slots, sockets and circuitry.

- Avoid dust, humidity, and temperature extremes. Do not place the product in any area where it may become wet.

- Place the product on a stable surface.

- If you encounter technical problems with the product, contact a qualified service technician or your retailer.

This symbol of the crossed out wheeled bin indicates that the product (electrical, electronic equipment, and mercury-containing button cell battery) should not be placed in municipal waste. Check local regulations for disposal of electronic products.

# About this guide

This user guide contains the information you need when installing and configuring the motherboard.

## How this guide is organized

This user guide contains the following parts:

*   **Chapter 1: Product introduction**

    This chapter describes the features of the motherboard and the new technologies it supports.

*   **Chapter 2: Hardware information**

    This chapter lists the hardware setup procedures that you have to perform when installing system components. It includes description of the switches, jumpers, and connectors on the motherboard.

*   **Chapter 3: Powering up**

    This chapter describes the power up sequence and ways of shutting down the system.

*   **Chapter 4: BIOS setup**

    This chapter tells how to change system settings through the BIOS Setup menus. Detailed descriptions of the BIOS parameters are also provided.

*   **Chapter 5: RAID configuration**

    This chapter provides instructions for setting up, creating, and configuring RAID sets using the available utilities.

*   **Chapter 6: Driver installation**

    This chapter provides instructions for installing the necessary drivers for different system components.

*   **Appendix: Reference information**

    This appendix includes additional information that you may refer to when configuring the motherboard.

## Where to find more information

Refer to the following sources for additional information and for product and software updates.

1.  **ASUS websites**

    The ASUS website provides updated information on ASUS hardware and software products. Refer to the ASUS contact information.

2.  **Optional documentation**

    Your product package may include optional documentation, such as warranty flyers, that may have been added by your dealer. These documents are not part of the standard package.

## Conventions used in this guide

To make sure that you perform certain tasks properly, take note of the following symbols used throughout this manual.

**DANGER/WARNING:** Information to prevent injury to yourself when trying to complete a task.

**CAUTION:** Information to prevent damage to the components when trying to complete a task.

**IMPORTANT:** Instructions that you MUST follow to complete a task.

**NOTE:** Tips and additional information to help you complete a task.

# Typography

| | |
|---|---|
| Bold text | Indicates a menu or an item to select. |
| Italics | Used to emphasize a word or a phrase. |
| <Key> | Keys enclosed in the less-than and greater-than sign means that you must press the enclosed key. |
| | Example: <Enter> means that you must press the Enter or Return key. |
| <Key1+Key2+Key3> | If you must press two or more keys simultaneously, the key names are linked with a plus sign (+). |
| | Example: <Ctrl+Alt+D> |
| `Command` | Means that you must type the command exactly as shown, then supply the required item or value enclosed in brackets. |
| | Example: At the DOS prompt, type the command line: `format A:/S` |

# DSEB-DG Series specifications summary

*Specifications are subject to change without notice.

This chapter describes the motherboard
features and the new technologies it supports.

# Product introduction

# Chapter summary

*1*

# 1.1 Welcome!

Thank you for buying an ASUS® DSEB-DG series motherboard!

The motherboard delivers a host of new features and latest technologies, making it another standout in the long line of ASUS quality motherboards!

Before you start installing the motherboard, and hardware devices on it, check the items in your package with the list below.

# 1.2 Package contents

Check your motherboard package for the following items.

| | | DSEB-DG/SAS Retail Pack | DSEB-DG Retail Pack | DSEB-DG Bulk Pack |
|---|---|---|---|---|
| Cables | SATA signal cable | 14 | 14 | -- |
| | SATA power cable | 7 | 7 | -- |
| | SAS cable (SFF-8087 to 4 x 29 pin SAS) | 2 | -- | -- |
| | 2-in-1 cable set (IDE + FDD cable) | 1 | 1 | -- |
| Accessories | IO shield | 1 | 1 | 1 |
| | CEK spring | 2 | 2 | 2 |
| Application CD | Support CD | 1 | 1 | 1 |
| Documentation | User Guide | 1 | 1 | 1 |
| Packing Qty. | | 3pcs per carton | 3pcs per carton | 10pcs per carton |

If any of the above items is damaged or missing, contact your retailer.

# 1.3 Serial number label

Before requesting support from the ASUS Technical Support team, you must take note of the motherboard's serial number containing 12 characters **xxM0Axxxxxxx** shown as the figure below. With the correct serial number of the product, ASUS Technical Support team members can then offer a quicker and satisfying solution to your problems.

# 1.4 Special features

## 1.4.1 Product highlights

### Latest processor technology

The motherboard comes with two LGA-771 sockets that support Dual-Core Intel® Xeon™ processors with 1600/1333/1066 MHz Front Side Bus (FSB). Dual-core processors contain two physical CPU cores to meet demands for more powerful processing. Intel® Xeon™ processors incorporate the Intel® Hyper-Threading Technology and Extended Memory 64-bit Technology (EM64T). The EM64T enables the support for 64-bit operation system, such as 64-bit Windows® and Linux.

### Intel® 5400 and Intel® 6321ESB chipset

The Intel® 5400 Memory Controller Hub (MCH) and the Intel® 6321ESB provide the vital interfaces for the motherboard.

The MCH provides the processor, quadri-channel FB-DIMM memory support, and PCI Express interfaces. The Intel® 6321ESB is a new generation server class I/O controller hub that provides the interface for PCI 2.3, PCI Express, and PCIX.

### Intel® EM64T

The motherboard supports Intel® processors with the Intel® EM64T (Extended Memory 64 Technology). The Intel® EM64T feature allows your computer to run on 64-bit operating systems and access larger amounts of system memory for faster and more efficient computing.

### Enhanced Intel SpeedStep® Technology (EIST)

The Enhanced Intel SpeedStep® Technology (EIST) intelligently manages the CPU resources by automatically adjusting the CPU voltage and core frequency depending on the CPU loading and system speed or power requirement.

### FB-DIMM memory support

This motherboard supports fully buffered DIMMs (FB-DIMMs), the latest memory solution that extends memory capacity and provide high-speed, high-density system memory peformance. FB-DIMMs use Advanced Memory Buffer (AMB) chips that transmit signals between the memory modules and controllers with improved signal integrity and reduced errors.

## PCIe 2.0

This motherboard supports the latest PCIe 2.0 device for twice the current speed and bandwidth. This enhances system performance while still providing backward compatibility to PCIe 1.0 devices.

### Serial Attached SCSI (SAS) technology support
*(DSEB-DG/SAS model only)*

SAS is the latest storage interface for enterprise-class storage devices. Building on and improving the parallel SCSI foundation, SAS is the new industry standard that includes Serial ATA interoperability, and is projected to be the succesor of the Ultra320 SCSI technology.

### Zero-Channel RAID (ZCR) solution
*(DSEB-DG/SAS model only)*

The motherboard comes with a ZCR socket for an optional Zero-Channel RAID card, allowing RAID 0 (striping), RAID 1 (mirroring), RAID 0+1, and RAID 5 configurations. The ZCR capability provides a cost-effective high-performance and added reliability.

## 82563/82573 LAN solution

The motherboard comes with a dual-port 82563EB network connection and two single-port 82573 L network connection to provide a total solution for your networking needs. See page 2-33 for the location of the LAN ports. See section **2.6 Jumpers** for details on Gigabit LAN settings.

## Serial ATA II technology

The motherboard supports the Serial ATA II 3 Gb/s technology through 6321ESB Serial ATA interfaces. The Serial ATA II specification provides twice the bandwidth of the current Serial ATA products with a host of new features, including Native Command Queuing (NCQ), Power Management (PM) Implementation Algorithm, and Hot Swap.  Serial ATA allows thinner, more flexible cables with lower pin count and reduced voltage requirements.

**USB 2.0 technology**

The motherboard implements the Universal Serial Bus (USB) 2.0 specification, dramatically increasing the connection speed from the 12 Mbps bandwidth on USB 1.1 to a fast 480 Mbps on USB 2.0. USB 2.0 is backward compatible with USB 1.1.

### Temperature, fan, and voltage monitoring

The CPU temperature is monitored by the W83793G chip to prevent overheating and damage. The system fan rotations per minute (RPM) is monitored for timely failure detection. The chip monitors the voltage levels to ensure stable supply of current for critical components.

### Intel® IOAT2

Intel® I/O Acceleration Technology (IOAT) is an integrated server platform I/O solution that addresses all segments of the server I/O bottleneck problem using TCP/IP without requiring any modification of existing or future applications. Intel® IOAT is a system-wide solution that increases CPU efficiency and delivers data to/from applications faster than current server platforms.

### High Power Efficiency

Compared with the non-green design platform, ASUS's new green motherboard design helps improve power efficiency to 90%. The motherboard, with less power comsumption loss, saves you more watts and more money.

## 1.4.2    Innovative ASUS features

**ASUS Smart Fan technology**

The ASUS Smart Fan technology smartly adjusts the fan speeds according to the system loading to ensure quiet, cool, and efficient operation.

This chapter lists the hardware setup
procedures that you have to perform
when installing system components. It
includes description of the jumpers and
connectors on the motherboard.

# Hardware information 2

# Chapter summary

2

# 2.1 Before you proceed

Take note of the following precautions before you install motherboard components or change any motherboard settings.

⚠️

- Unplug the power cord from the wall socket before touching any component.

- Use a grounded wrist strap or touch a safely grounded object or a metal object, such as the power supply case, before handling components to avoid damaging them due to static electricity.

- Hold components by the edges to avoid touching the ICs on them.

- Whenever you uninstall any component, place it on a grounded antistatic pad or in the bag that came with the component.

- Before you install or remove any component, ensure that the power supply is switched off or the power cord is detached from the power supply. Failure to do so may cause severe damage to the motherboard, peripherals, and/or components.

## Onboard LED

**1. Standby Power LED**

The motherboard comes with a standby power LED. The green LED lights up to indicate that the system is ON, in sleep mode, or in soft-off mode. This is a reminder that you should shut down the system and unplug the power cable before removing or plugging in any motherboard component. The illustration below shows the location of the onboard LED

**DSEB-DG Series Onboard LED**

# 2.2 Motherboard overview

Before you install the motherboard, study the configuration of your chassis to ensure that the motherboard fits into it.

To optimize the motherboard features, we highly recommend that you install it in an SSI CEB 1.1 compliant chassis.

> Make sure to unplug the chassis power cord before installing or removing the motherboard. Failure to do so can cause you physical injury and damage motherboard components!

## 2.2.1 Placement direction

When installing the motherboard, make sure that you place it into the chassis in the correct orientation. The edge with external ports goes to the rear part of the chassis as indicated in the image below.

## 2.2.2 Screw holes

Place nine (9) screws into the holes indicated by circles to secure the motherboard to the chassis.

> DO NOT overtighten the screws! Doing so can damage the motherboard.

Place this side towards the rear of the chassis
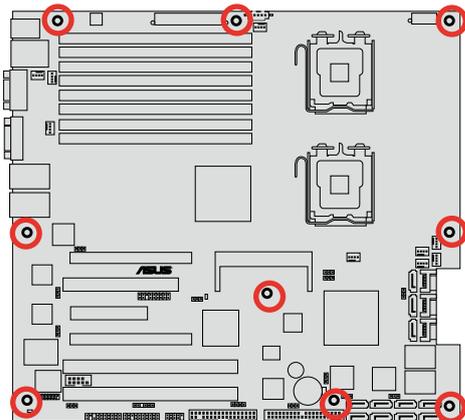

## 2.2.3 Support kits for the motherboard

For additional protection from motherboard breakage due to the weight of the CPU heatsinks, your motherboard package comes with CEK springs that you can use as weight support. Install the CEK springs before installing the motherboard.

We strongly recommend you use SSI CEB 1.1 compliant chassis. Otherwise, the CPU cooler cannot be mounted on the chassis.

Each CEK spring has four hooks to match the designated holes around the CPU area.

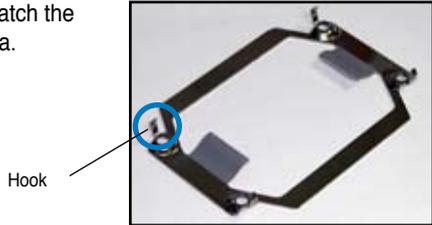

Hook

To install the CEK spring:

1. Locate the CPU heatsink holes on the motherboard.

Socket for CPU2

Heatsink hole

Socket for CPU1
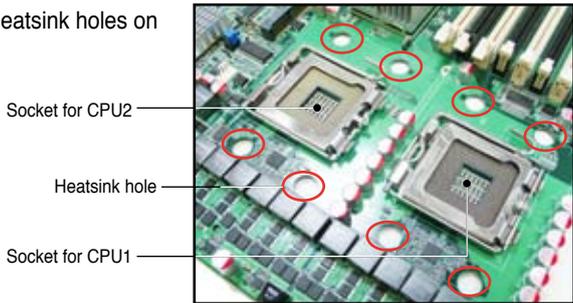

2. Position the CEK spring underneath the motherboard, then match the CEK spring hooks to the CPU1 heatsink holes.

3.   Press the upper spring hooks
     inward, then insert to the upper
     CPU heatsink holes until they snap
     in place.

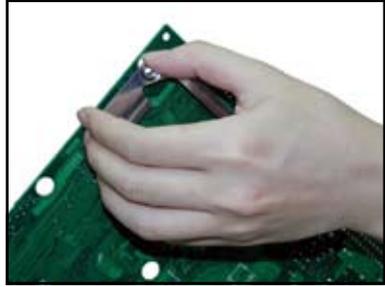

4.   Press the lower spring clips inward,
     then insert to the lower CPU
     heatsink holes until they snap in
     place.

5.   If you installed a second CPU,
     repeat steps 2 to 4 to install the
     CEK spring to the CPU2 heatsink
     holes.
     The CEK springs appear as shown
     when installed.

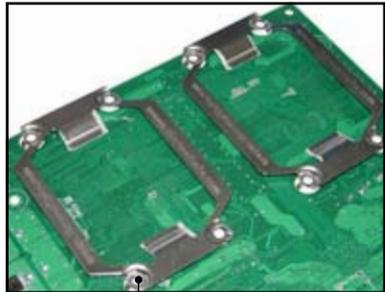

CEK spring screw hole

6.  Before installing the motherboard into the chassis, locate the standoffs that should match the eight (8) CEK spring screw holes.

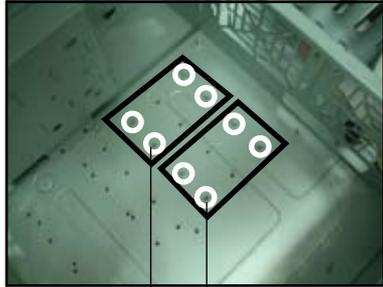

Standoffs for CPU1

Standoffs for CPU2

7.  Install the motherboard with the external I/O ports toward the chassis rear panel. The CPU sockets should be right on top of their respective standoffs.

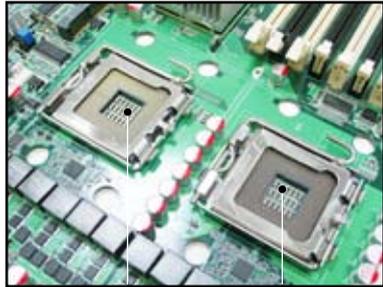

Socket for CPU2      Socket for CPU1

Make sure that the standoffs perfectly match the CEK spring screw holes; otherwise, you can not install the CPU heatsinks properly.

8.  Secure the motherboard with nine (9) screws. Refer to section **2.2.2 Screw holes** for illustration.

## 2.2.4    Motherboard layouts

# 2.3 Central Processing Unit (CPU)

The motherboard comes with a surface mount LGA771 socket designed for the Intel® Xeon® Dual/Quad Core processor.

| | |
|---|---|
| ⚠ | • Your boxed Intel® Xeon® LGA771 processor package should come with installation instructions for the CPU and heatsink. If the instructions in this section do not match the CPU documentation, follow the latter. |
| | • Upon purchase of the motherboard, make sure that the PnP cap is on the socket and the socket contacts are not bent. Contact your retailer immediately if the PnP cap is missing, or if you see any damage to the PnP cap/socket contacts/motherboard components. ASUS will shoulder the cost of repair only if the damage is shipment/transit-related. |
| | • Keep the cap after installing the motherboard. ASUS will process Return Merchandise Authorization (RMA) requests only if the motherboard comes with the cap on the LGA771 socket. |
| | • The product warranty does not cover damage to the socket contacts resulting from incorrect CPU installation/removal, or misplacement/loss/ incorrect removal of the PnP cap. |

## 2.3.1 Installing the CPU

To install a CPU:

1.    Locate the CPU socket on the motherboard.

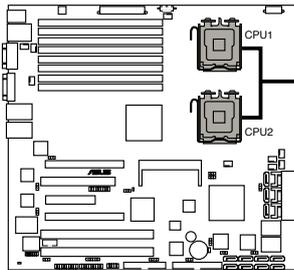

**DSEB-DG Series CPU LGA771**

| | |
|---|---|
| ✎ | • Before installing the CPU, make sure that the socket box is facing towards you and the load lever is on your left. |
| | • We recommend you install the CPU to CPU2 socket for a better thermal environment when installing only one CPU. |

2.    Press the load lever with your thumb (A), then move it to the left (B) until it is
      released from the retention tab.

Retention tab

Load lever

**A**

**B**

PnP cap

This side of the socket box
should face you.
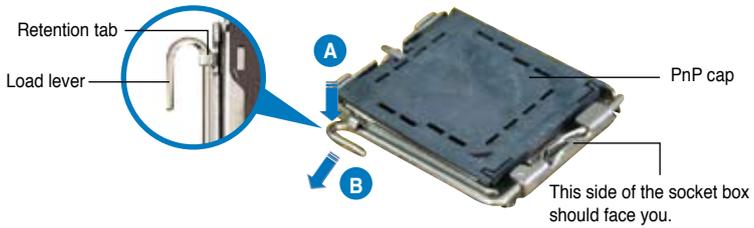

To prevent damage to the socket pins, do not remove the PnP cap unless you
are installing a CPU.

3.    Lift the load lever in the direction of
      the arrow to a 135º angle.
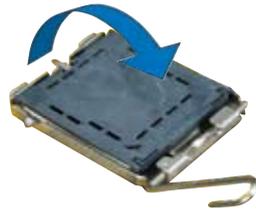

4.    Lift the load plate with your
      thumb and forefinger to a 100º
      angle (A), then push the PnP
      cap from the load plate window
      to remove (B).

**B**

**A**
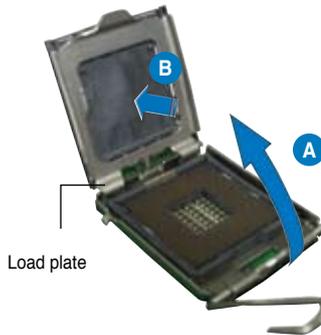

Load plate

5.    Position the CPU over
      the socket, making sure
      that the gold triangle
      is on the bottom-left
      corner of the socket.
      The socket alignment
      key should fit into the
      CPU notch.

Alignment key

Gold triangle mark
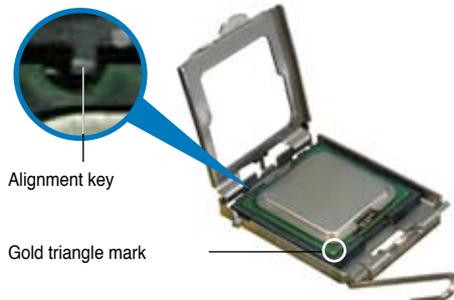

6.  Close the load plate (A), then push the load lever (B) until it snaps into the retention tab.

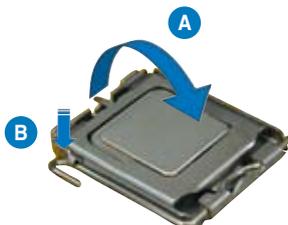

⚠️ The CPU fits in only one correct orientation. DO NOT force the CPU into the socket to prevent bending the connectors on the socket and damaging the CPU!

## Notes on Intel® Hyper-Threading Technology

✎
- This motherboard supports Intel® Xeon™ CPUs in the 771-land package with Hyper-Threading Technology.

- Hyper-Threading Technology is supported by Intel® 5000 series CPU only. 5100/5200/5300/5400 series DO NOT support Hyper-Threading.

- The amount of CPU threads depends on the OS support.

- Hyper-Threading Technology is supported under Windows® XP/2003 Server and Linux 2.4.x (kernel) and later versions only. Under Linux, use the Hyper-Threading compiler to compile the code. If you are using any other operating systems, disable the Hyper-Threading Technology item in the BIOS to ensure system stability and performance.

- Installing Windows® 2003 Server or later version is recommended.

- Make sure to enable the Hyper-Threading Technology item in BIOS before installing a supported operating system.

- For more information on Hyper-Threading Technology, visit Intel® website (**www.intel.com/info/hyperthreading**).

To use the Hyper-Threading Technology on this motherboard:

1.  Install an Intel® Xeon™ CPU that supports Hyper-Threading Technology.

2.  Power up the system and enter the BIOS Setup (see Chapter 4: BIOS setup). Under the Advanced Menu, make sure that the item Hyper-Threading Technology is set to Enabled. The item appears only if you installed a CPU that supports Hyper-Threading Technology.

3.  Reboot the computer.

## 2.3.2    Installing the CPU heatsink and fan

The Intel® Xeon™ processors require an Intel certified heatsink and fan assembly to ensure optimum thermal condition and performance.

When you buy a boxed Intel CPU, the package includes the heatsink, fan, retention brackets, screws, thermal grease, installation manual, and other items that are necessary for CPU installation.

• Make sure that you have applied the thermal grease to the top of the CPU before installing the heatsink and fan.

• Refer to the installation manual that came with the CPU package for details on heatsink/fan assembly and installation.

CPU heatsink (top view)

CPU heatsink (bottom view)
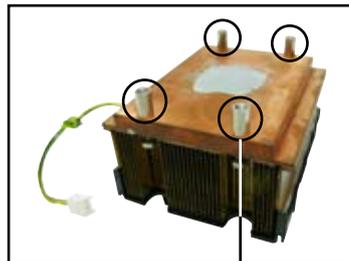

**Heatsink screw**

To install the CPU heatsink and fan:

1.    Place the heatsink on top of the installed CPU, making sure that the four screws on the heatsink align with the nuts on the support plate.

2.    Use a Phillips screwdriver to tighten
      the four heatsink screws in a
      diagonal sequence.

3.    Connect the fan cable to the 4-pin
      connector labeled CPU_FAN2.

         DO NOT forget to connect
         the CPU fan cable! Hardware
         monitoring errors may occur if
         you fail to plug this connector.

CPU_FAN2
connector

4.    Repeat steps 1 to 3 to install the other heatsink if you have installed a second
      CPU, then connect the fan cable to the 4-pin connector labeled CPU_FAN1.

# 2.4    System memory

## 2.4.1    Overview

The motherboard features eight fully-buffered DIMM (FB-DIMM) sockets to support 240-pin FB-DIMM modules. You can purchase extra FB-DIMM modules based on your needs. An FB-DIMM module has a different pin-out from DDR2 DIMMs so you cannot install DDR2 DIMMs on an FB-DIMM socket. Note that an FB-DIMM socket has an Advanced Memory Buffer (AMB) chip that allows memory-to-CPU connection at gigabit speed.

The figure illustrates the location of the FB-DIMM sockets:

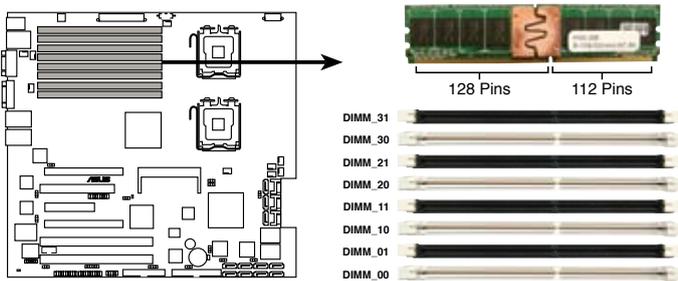

**DSEB-DG Series 240-pin FB-DIMM sockets**

## Rank population

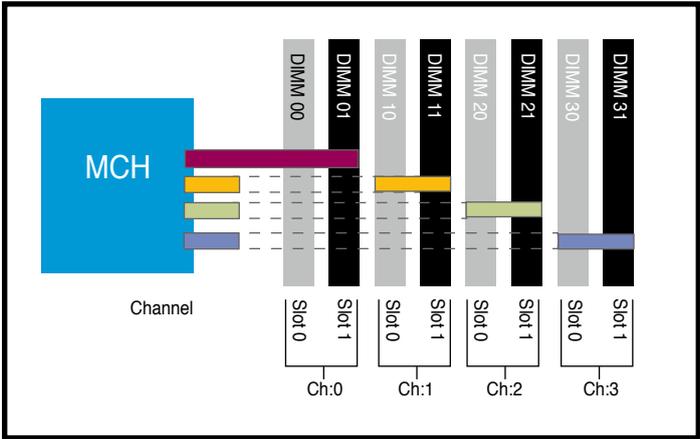

## DIMM installation reference table

| No. of DIMMs | | Slot(s) to use | Memory architecture |
|---|---|---|---|
| 1 | single DIMM | DIMM_00 | single channel |
| 2 | one pair | DIMM_00, DIMM_10 | dual-channel |
| 4 | two pairs | (DIMM_00, DIMM_10)<br>(DIMM_20, DIMM_30) | Quadri-channel |
| 6 | three pairs | (DIMM_00, DIMM_10)<br>(DIMM_20, DIMM_30)<br>(DIMM_01, DIMM_11) | Quadri-channel |
| 8 | four pairs | (DIMM_00, DIMM_10)<br>(DIMM_20, DIMM_30)<br>(DIMM_01, DIMM_11)<br>(DIMM_21, DIMM_31) | Quadri-channel |

DIMMs in pair means two DIMMs with the same configuration.

## 2.4.3    Memory mirroring and sparing technology

The Intel® 5400 chipset supports the memory mirroring and sparing technology. Refer to the below sections:

### Memory Mirroring:

When enabling memory mirroring function in the BIOS setting (please refer the section **4.4.2 Chipset Configuration** and configure the option **Memory Branch Mode** as **Branch Mirroring**), Branch 1 contains a replicate copy of the data in Branch 0. The DIMMs must cover the same slot position on both branches. DIMMs that cover a slot position must be identical with respect to size, speed, and organization. DIMMs within a slot position must match each other, but aren't required to match adjacent slot positions.

And the total memories size will be the half of all installed memories.

The below two memory configurations were required to operate in mirrored mode.

1.    Configuration 1 (Mirroring): **Four memories population**

MCH

DIMM 00 (Slot 0:Channel 0)
DIMM 01 (Slot 1:Channel 0)
DIMM 10 (Slot 0:Channel 1)
DIMM 11 (Slot 1:Channel 1)
DIMM 20 (Slot 0:Channel 2)
DIMM 21 (Slot 1:Channel 2)
DIMM 30 (Slot 0:Channel 3)
DIMM 31 (Slot 1:Channel 3)

Branch 0          Branch 1 (Mirror)
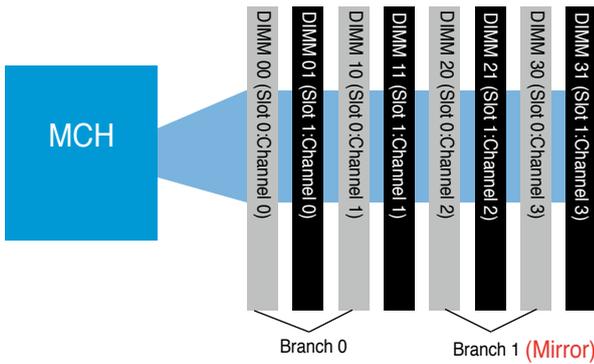

2.    Configuration 2 (Mirroring) : **Eight memories population**

MCH

DIMM 00 (Slot 0:Channel 0)
DIMM 01 (Slot 1:Channel 0)
DIMM 10 (Slot 0:Channel 1)
DIMM 11 (Slot 1:Channel 1)
DIMM 20 (Slot 0:Channel 2)
DIMM 21 (Slot 1:Channel 2)
DIMM 30 (Slot 0:Channel 3)
DIMM 31 (Slot 1:Channel 3)

Branch 0          Branch 1 (Mirror)
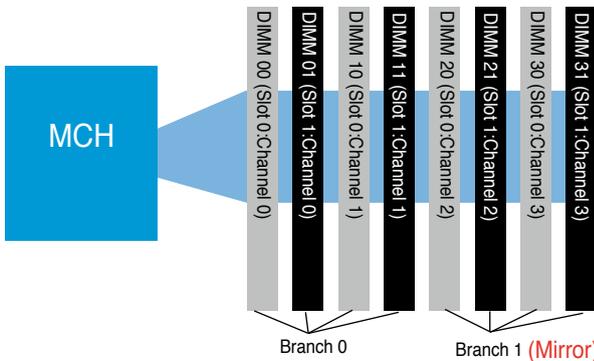

## Memory Sparing :

At configuration time, a DIMM rank is set aside to replace a defective DIMM rank. When the error rate for a failing DIMM rank reaches a pre-determined threshold, the memory sparing function will issue an interrupt and initiate a spare copy. At the completion of the copy, the failing DIMM rank is disabled and the "spared" DIMM rank will be used in its place. Refer to **4.4.2 Chipset Configuration** and configure the options of **Branch Specific Sparing** to enable the memory sparing functions. And the default BIOS setting is disabled.

- Each branch contains its own sparing engine and can be enabled or disabled separately.

- This motherboard does not support rank sparing across branches.

- This motherboard does not support rank sparing when in mirror mode.

- The DIMM rank with the largest size will be assigned as spare rank. Data can only be copied from a smaller sized rank to a larger sized one.

- A DIMM can contain only one or two ranks. To support sparing function, a DIMM channel should contain at least two ranks.

- When sparing function is enabled, the usable memory size will reduce then size of the spare ranks.

The following tables show memory configurrations with Memory Sparing function in Branch 0.

*One DIMM per channel (two ranks)*

| | | Channel 0 | | Channel 1 | |
|---|---|---|---|---|---|
| | | DIMM_00 (1024MB*2 Ranks) | | DIMM_10 (1024MB*2 Ranks) | |
| **Branch0** | | Rank 0 (1024 MB) | Rank 1 (1024 MB) | Rank 0 (1024 MB) | Rank 1 (1024 MB) |
| | Sparing | | ● | | ● |
| | Memory space | 1024 MB | | 1024 MB | |
| | Total Memory | 2048 MB | | | |

_Two DIMM per channel (two ranks)_

| | | Channel 0 | | Channel 1 | |
|---|---|---|---|---|---|
| Branch0 | | **DIMM_00 (512MB*2 Ranks)** | | **DIMM_10 (512MB*2 Ranks)** | |
| | | Rank 0 (512 MB) | Rank 1 (512 MB) | Rank 0 (512 MB) | Rank 1 (512 MB) |
| | **Sparing** | | | | |
| | **Memory space** | 1024 MB | | 1024 MB | |
| | | **DIMM_01 (1024MB*2 Ranks)** | | **DIMM_11 (1024MB*2 Ranks)** | |
| | | Rank 0 (1024 MB) | Rank 1 (1024 MB) | Rank 0 (1024 MB) | Rank 1 (1024 MB) |
| | **Sparing** | | ● | | ● |
| | **Memory space** | 1024 MB | | 1024 MB | |
| | **Total Memory** | 4096 MB | | | |

## 2.4.4    Installing a DIMM

Make sure to unplug the power supply before adding or removing DIMMs or other system components. Failure to do so may cause severe damage to both the motherboard and the components.

To install a DIMM:

1. Unlock a DIMM socket by pressing the retaining clips outward.
2. Align a DIMM on the socket such that the notch on the DIMM matches the break on the socket.
3. Firmly insert the DIMM into the socket until the retaining clips snap back in place and the DIMM is properly seated.
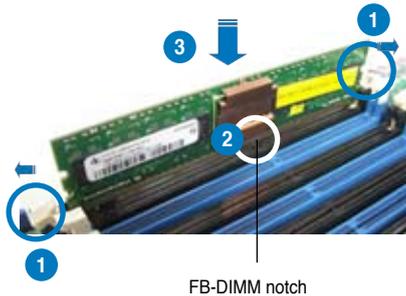

FB-DIMM notch

- A FB-DIMM is keyed with a notch so that it fits in only one direction. DO NOT force a DIMM into a socket to avoid damaging the DIMM.

- The FB-DIMM sockets do not support DDR2 DIMMs. DO NOT install DDR2 DIMMs to the FB-DIMM sockets.

## 2.4.5    Removing a DIMM

To remove a DIMM:

1. Simultaneously press the retaining clips outward to unlock the DIMM.

Support the DIMM lightly with your fingers when pressing the retaining clips. The DIMM might get damaged when it flips out with extra force.
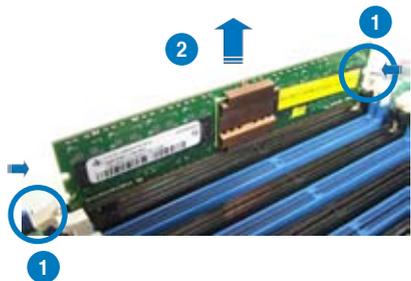

2. Remove the DIMM from the socket.

## 2.4.6    Installing the MemCool FB-DIMM fan (opional)

The FB-DIMMs generate heat during continued operation. To ensure optimum thermal condition and performance, install the optional MemCool FB-DIMM fan.

To install the optional FB-DIMM fan:

1.    Locate the three FB-DIMM fan holes on the motherboard.

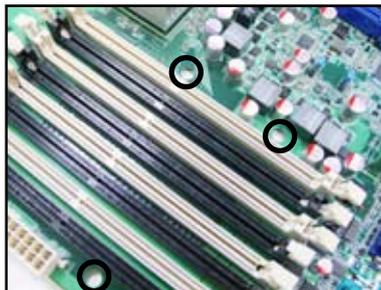

2.    Disengage the fan top cover from the fan base. You can do this by firmly gripping the top cover by the clamps to release the hooks, then pull up the top cover carefully until it separates from the fan base.

Top cover clamp

Top cover hook

Fan base

DO NOT remove the fan from the fan base.
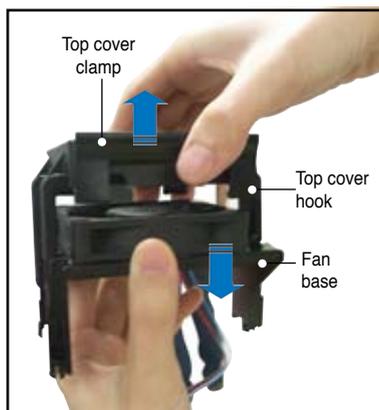

3.    Position the fan base over the DIMMs, and insert the fan base legs into the FB-DIMM holes until the legs are securely in place.

For instructional purposes only, no FB-DIMM is installed on any of the slots.

4.  Position top cover over the fan base. Insert the top cover legs into the slot on the fan base legs.

    Push down carefully until the legs are securely in place and the top cover hooks snap in place.

Make sure the cables pass through the notch on the fan base as shown.

5.  Connect the fan cable to the 4-pin connector labeled FBD_FAN1.
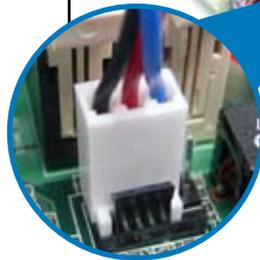

## 2.4.7    Uninstalling the optional MemCool FB-DIMM fan

1.   Unplug the fan cable.

2.   Grip the top cover clamps until  the top cover hooks are released, then carefully lift the top cover while supporting the fan base with your free hand.

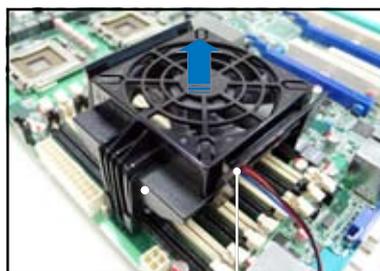

Top cover clamp

3.   Carefully lift the fan base.

# 2.5 Expansion slots

In the future, you may need to install expansion cards. The following sub-sections describe the slots and the expansion cards that they support.

Make sure to unplug the power cord before adding or removing expansion cards. Failure to do so may cause you physical injury and damage motherboard components.

## 2.5.1 Installing an expansion card

To install an expansion card:

1. Before installing the expansion card, read the documentation that came with it and make the necessary hardware settings for the card.
2. Remove the system unit cover (if your motherboard is already installed in a chassis).
3. Remove the bracket opposite the slot that you intend to use. Keep the screw for later use.
4. Align the card connector with the slot and press firmly until the card is completely seated on the slot.
5. Secure the card to the chassis with the screw you removed earlier.
6. Replace the system cover.

## 2.5.2 Configuring an expansion card

After installing the expansion card, configure the it by adjusting the software settings.

1. Turn on the system and change the necessary BIOS settings, if any. See Chapter 4 for information on BIOS setup.
2. Assign an IRQ to the card. Refer to the tables on the next page.
3. Install the software drivers for the expansion card.

When using PCI cards on shared slots, ensure that the drivers support "Share IRQ" or that the cards do not need IRQ assignments. Otherwise, conflicts will arise between the two PCI groups, making the system unstable and the card inoperable.

## 2.5.3    Interrupt assignments

**Standard Interrupt assignmnets**

| IRQ | Priority | Standard function |
|-----|----------|-------------------|
| 0 | 1 | System Timer |
| 1 | 2 | Keyboard Controller |
| 2 | - | Programmable Interrupt |
| 3* | 11 | Communications Port (COM2) |
| 4* | 12 | Communications Port (COM1) |
| 5* | 13 | -- |
| 6 | 14 | Floppy Disk Controller |
| 7* | 15 | -- |
| 8 | 3 | System CMOS/Real Time Clock |
| 9* | 4 | ACPI Mode when used |
| 10* | 5 | IRQ Holder for PCI Steering |
| 11* | 6 | IRQ Holder for PCI Steering |
| 12* | 7 | PS/2 Compatible Mouse Port |
| 13 | 8 | Numeric Data Processor |
| 14* | 9 | Primary IDE Channel |
| 15* | 10 | Secondary IDE Channel |

* These IRQs are usually available for ISA or PCI devices.

## 2.5.4    DDR2 SODIMM socket

The DDR2 SODIMM socket on the motherboard supports an ASUS® Server Management Board 3 Series (ASMB3).

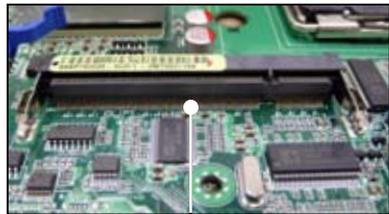

SODIMM socket

## 2.5.5    PCI Express x16 slots (x16 link)

The onboard PCI Express x16 slots provides x16 link to the ESB2. These slots, which support the latest PCIe 2.0 device for twice the current speed and bandwidth, are designed for various server class high performance add-on cards

## 2.5.6    PCI Express x8 slot (x8 link)

The onboard PCI Express x8 slot provides x8 link to the ESB2. These slots are designed for various server class high performance add-on cards like SCSI RAID card, fiber-channel card, etc.

## 2.5.7    PCI/PCIX slot

The PCI/PCI-X slots support cards such as a LAN card, SCSI card, USB card, and other cards that comply with PCI 2.3 and PCI-X 1.0 specifications.

## 2.5.8    ZCR slot *(DSEB-DG/SAS model only)*

The 64bit PCI-X slot (green) on the motherboard supports a Zero-Channel RAID card that allows RAID0, RAID1, RAID10 and RAID 5 configurations.

> • When installing an optional ZCR card, install the card on PCIX5 slot (colored green on DSEB-DG/SAS model).
>
> • The optional ZCR card for DSEB-DG/SAS onboard LSI 1068 SAS controller is LSI MegaRAID SAS 8300XLP card. Visit the LSI LOGIC website (www. lsilogic.com) for more information.
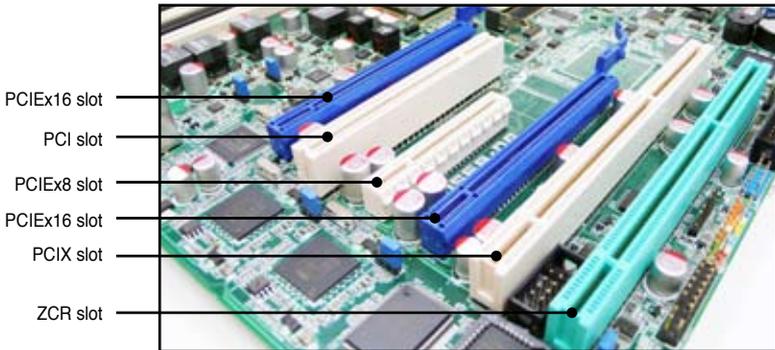

# 2.6 Jumpers

1. **Clear RTC RAM (CLRTC1)**

   This jumper allows you to clear the Real Time Clock (RTC) RAM in CMOS. You can clear the CMOS memory of date, time, and system setup parameters by erasing the CMOS RTC RAM data. The onboard button cell battery powers the RAM data in CMOS, which include system setup information such as system passwords.

   To erase the RTC RAM:

   1. Turn OFF the computer and unplug the power cord.

   2. Move the jumper cap from pins 1-2 (default) to pins 2-3. Keep the cap on pins 2-3 for about 5~10 seconds, then move the cap back to pins 1-2.

   3. Plug the power cord and turn ON the computer.

   4. Hold down the <Del> key during the boot process and enter BIOS setup to re-enter data.

   > ⚠ Except when clearing the RTC RAM, never remove the cap on CLRTC jumper default position. Removing the cap will cause system boot failure!

   > 📝 If the steps above do not help, remove the onboard battery and move the jumper again to clear the CMOS RTC RAM data. After the CMOS clearance, reinstall the battery.

**DSEB-DG Series Clear RTC RAM**

CLRTC1

Normal (Default)     Clear CMOS
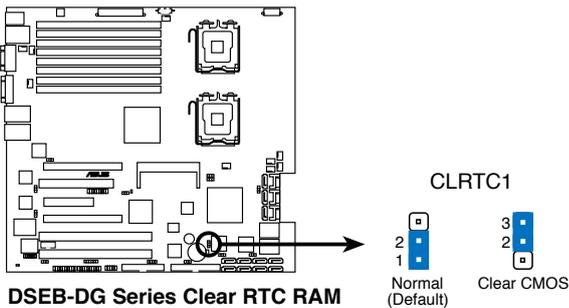

2. **VGA controller setting (3-pin VGA_EN1)**

   This jumper allows you to enable or disable the onboard VGA controller. Set to pins 1-2 to activate the VGA feature.

VGA_EN1

Enable (Default)    Disable

**DSEB-DG Series VGA setting**
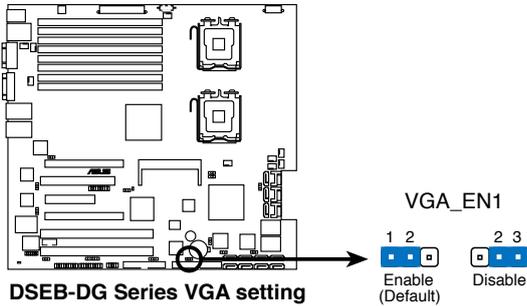

3. **LAN controller setting (3-pin LAN_EN1, LAN_EN3, LAN_EN4)**

   These jumpers allow you to enable or disable the onboard Intel® 82563EB Gigabit LAN controller and the onboard Intel® 82573L Gigabit LAN controllers. Set to pins 1-2 to activate the Gigabit LAN feature.

LAN_EN1

Enable (Default)    Disable

LAN_EN3      LAN_EN4

Enable (Default)   Disable     Enable (Default)   Disable

**DSEB-DG Series LAN setting**
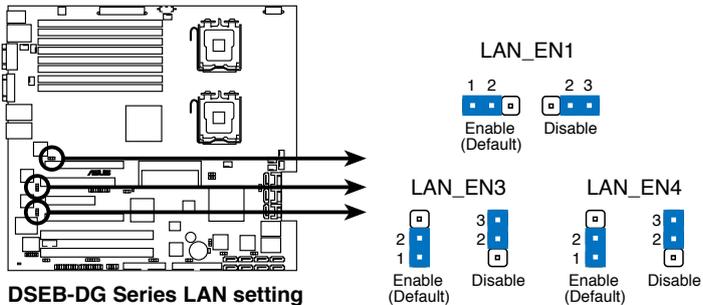

4.  **Fan control setting (3-pin CPUFAN_SET1, CHAFAN_SET1)**

    These jumpers allow you to switch for fan pin selection. The CPUFAN_SET1 jumper is for the CPU fans control and CHAFAN_SET1 is for the other fans control including front fans, rear fans and FB-DIMM fans. Set to pins 1-2 for 4-pin fans or pins 2-3 for 3-pin fans.

FAN_SET1 (CPU Fan)
FAN_SET2 (Other Fans)

1 2          2 3

Balanced     DC FAN
(Default)
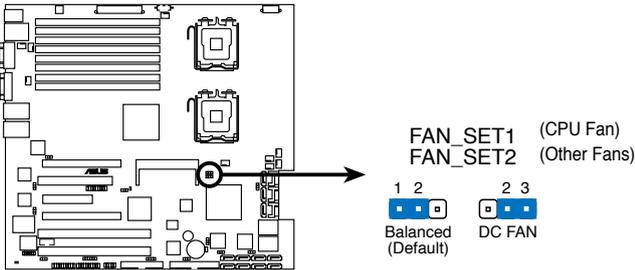

**DSEB-DG Series FAN setting**

⌇
    •   If you use a 4-pin fan but set the jumper to pin 2-3, the fan you installed may not work.

    •   If you use a 3-pin fan but set the jumper for a 4-pin fan, the fan controll will not work and the fan you installed will always run at full speed.

5.  **Intel® 6321ESB SATA port S/W RAID setting (3-pin RAID_SEL1)**
    *(DSEB-DG model only)*

    This jumper allows you to select the Serial ATA RAID configuration utility to use when you create disk arrays. Both utilities are supported by the Intel® 6321ESB. Place the jumper caps on pins 1-2 if you want to use the LSI MegaRAID Serial ATA RAID utility (default); otherwise, place the jumper caps on pins 2-3 to use the Intel® Matrix Storage Manager (IMSM).

RAID_SEL1

3
2
1
2
1

LSI          Intel
(Default)
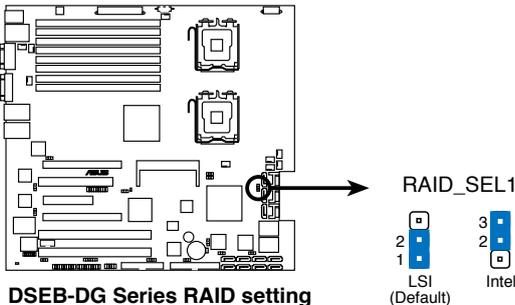

**DSEB-DG Series RAID setting**

6.  **Onboard storage setting (3-pin SAS_EN1)** *(DSEB-DG/SAS model only)*

    This jumper allows you to enable or disable the onboard LSI1068 SAS controller. Set the jumper to pins 1-2 to enable the SAS function (default).

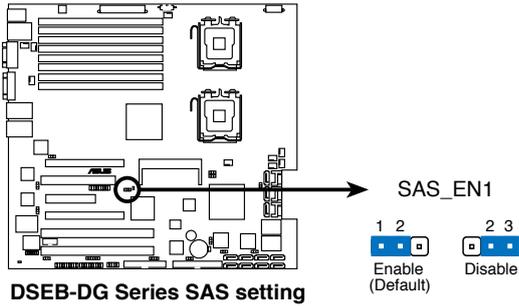

SAS_EN1

1 2  Enable (Default)

2 3  Disable

**DSEB-DG Series SAS setting**

7.  **Onboard SATA setting (3-pin SATA_EN1, SATA_EN2)** *(DSEB-DG model only)*

    This jumper allows you to enable or disable two onboard Marvell® 6145 SATA controller. Set the jumper to pins 1-2 to enable the SATA function (default).

SATA_EN1
SATA_EN2

1 2  Enable (Default)

2 3  Disable

**DSEB-DG Series SATA setting**
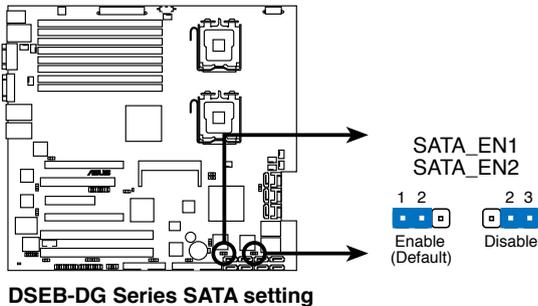

**8. Force BIOS recovery setting (3-pin RECOVERY1)**

This jumper allows you to quickly update or recover the BIOS settings when it becomes corrupted.

To update the BIOS:

1. Prepare a floppy disk that contains the original or latest BIOS for the motherboard (DSEB-DG.ROM) and the AFUDOS.EXE utility.

2. Set the jumper to pins 2-3.

3. Insert the floppy disk then turn on the system to update the BIOS.

4. Shut down the system.

5. Set the jumper back to pins 1-2.

6. Turn on the system.

RECOVERY1

1 2      2 3

Normal    BIOS Recovery
(Default)

**DSEB-DG Series BIOS recovery setting**
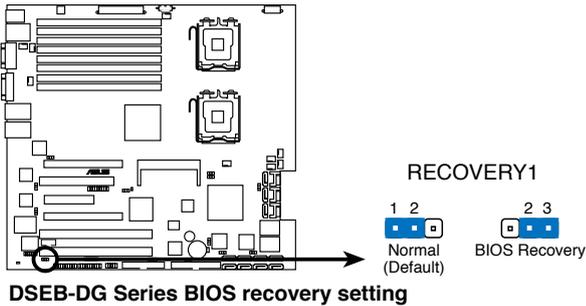

# 2.7 Connectors

## 2.7.1 Rear panel connectors

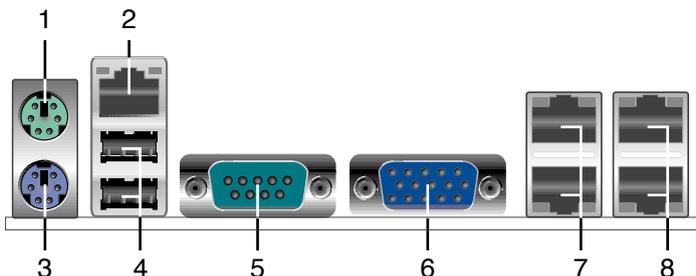

1. **PS/2 mouse port (green)**. This port is for a PS/2 mouse.
2. **RJ-45 port for iKVM**. This RJ-45 port functions only when you install ASMB3 iKVM management card.
3. **PS/2 keyboard port (purple)**. This port is for a PS/2 keyboard.
4. **USB 2.0 ports 1 and 2**. These two 4-pin Universal Serial Bus (USB) ports are available for connecting USB 2.0 devices.
5. **Serial (COM1) port**. This 9-pin communication port is for pointing devices or other serial devices.
6. **Video Graphics Adapter port**. This port is for a VGA monitor or other VGA-compatible devices.
7. **LAN 1/2 (RJ-45) ports**. These ports allow Gigabit connection to a Local Area Network (LAN) through a network hub. Refer to the table below for the LAN port LED indications.
8. **LAN 3/4 (RJ-45) ports**. These ports allow Gigabit connection to a Local Area Network (LAN) through a network hub. Refer to the table below for the LAN port LED indications.

## LAN port LED indications

| Activity/Link LED | | Speed LED | |
|---|---|---|---|
| Status | Description | Status | Description |
| OFF | No link | OFF | 10 Mbps connection |
| ORANGE | Linked | ORANGE | 100 Mbps connection |
| BLINKING | Data activity | GREEN | 1 Gbps connection |

ACT/LINK SPEED
LED    LED

LAN port
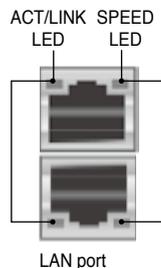

## 2.7.2    Internal connectors

**1.    Floppy disk drive connector (34-1 pin FLOPPY1)**

This connector is for the provided floppy disk drive (FDD) signal cable. Insert one end of the cable to this connector, then connect the other end to the signal connector at the back of the floppy disk drive.

Pin 5 on the connector is removed to prevent incorrect cable connection when using a FDD cable with a covered Pin 5.
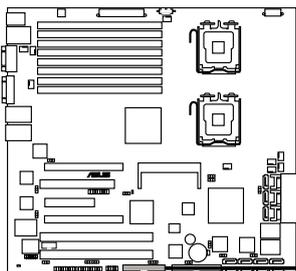

FLOPPY1

PIN1

**NOTE:** Orient the red markings on the floppy ribbon cable to PIN 1.

**DSEB-DG Series Floppy disk drive connector**

**2.    IDE connector (40-1 pin PRI_IDE1)**

This connector is for an Ultra DMA 100/66 signal cable. The Ultra DMA 100/66 signal cable has three connectors: a blue connector for the primary IDE connector on the motherboard, a black connector for an Ultra DMA 100/66 IDE slave device (optical drive/hard disk drive), and a gray connector for an Ultra DMA 100/66 IDE master device (hard disk drive). If you install two hard disk drives, you must configure the second drive as a slave device by setting its jumper accordingly. Refer to the hard disk documentation for the jumper settings.

• Pin 20 on the IDE connector is removed to match the covered hole on the Ultra DMA cable connector. This prevents incorrect insertion when you connect the IDE cable.

• Use the 80-conductor IDE cable for Ultra DMA 100/66 IDE devices.

PRI_IDE1

PIN1
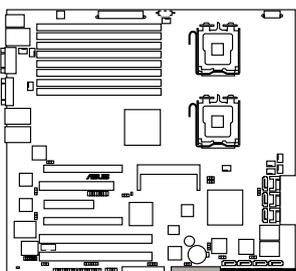

**DSEB-DG Series IDE connector**

3.   **Serial ATA connectors**
     **(7-pin SATA1, SATA2, SATA3, SATA4, SATA5, SATA6 )**

     These connectors, controlled by southbridge ESB2, are for the Serial ATA
     signal cables for Serial ATA hard disk drives.

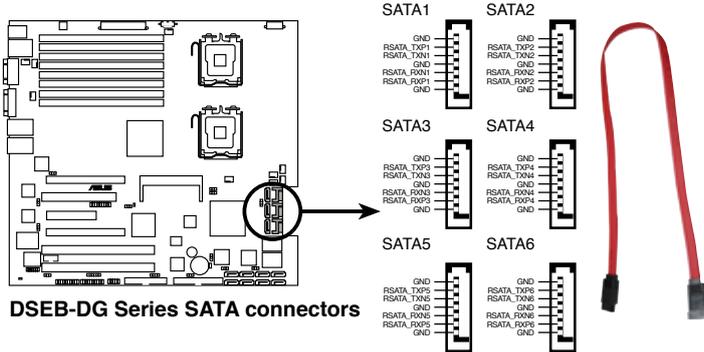

**DSEB-DG Series SATA connectors**

4.   **Serial ATA connectors**
     **(7-pin SATA_E1, SATA_E2, SATA_E3, SATA_E4, SATA_E5, SATA_E6,**
     **SATA_E7, SATA_E8)** *(DSEB-DG model only)*

     These connectors, controlled by two Marvell® 6145 chipsets, are for the Serial
     ATA signal cables for Serial ATA hard disk drives.

**DSEB-DG Series
SATA connectors**
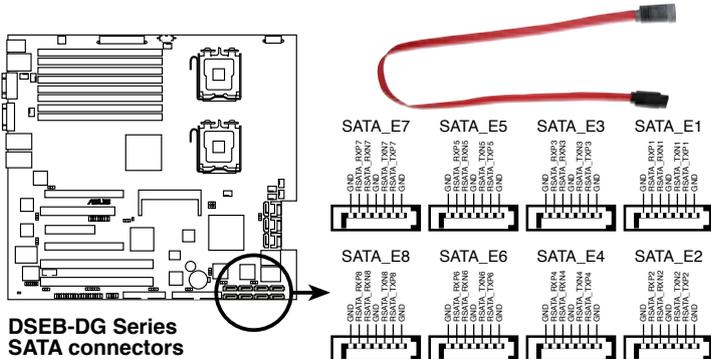

| Marvell® 6145 SATA controller. | |
|---|---|
| **Controller** | **Desrciption** |
| SATA controller 1 | Controls SATA_E1, SATA_E2, SATA_E3, SATA_E4 |
| SATA controller 2 | Controls SATA_E5, SATA_E6, SATA_E7, SATA_E8 |

5. **SAS connectors** *(DSEB-DG/SAS model only)*

    This motherboard comes with two Serial Attached SCSI (SAS) connectors, the next-generation storage technology that supports both Series SCSI and Serial ATA (SATA). Each connector supports one device.

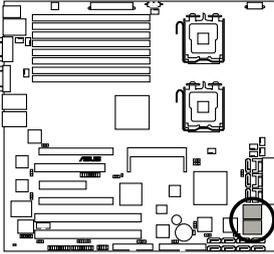

**DSEB-DG Series MINI SAS connectors**

To connect the SAS cable:

> Plug in the SAS cable to the SAS connector until the cable lock snaps in place.

To disconnect the SAS cable:

1.  With your thumb, push down the cable lock to release.

2.  While still keeping your thumb's grip on the cable lock, carefully pull away the cable from the connector.
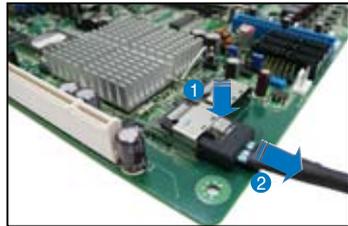

6. **SAS LSI1068 ports LED connector (18-1 pin SASLED1)**
   *(DSEB-DG/SAS model only)*

   This connector is for the front panel LED port indicator that shows the SAS HDD status.

   **DSEB-DG Series SASLED connector**

7. **Serial General Purpose Input/Output connector (6-1 pin SGPIO1)**
   *(DSEB-DG model only)*

   This connector is used for the SGPIO peripherals for the LSI MegaRAID SATA LED.

   **DSEB-DG Series SGPIO connector**

**8. Hard disk activity LED connector (4-pin HDLED1)**

This connector is used to connect to a hard disk drive active LED connector on the SCSI or RAID card.
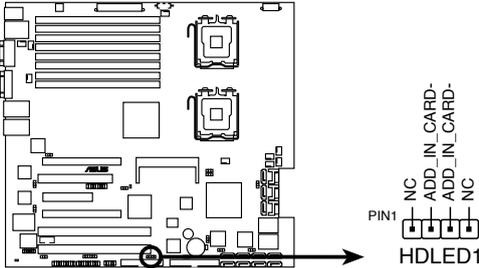

**DSEB-DG Series storage card activity LED connector**

**9. USB connector (10-1 pin USB34)**

This connector is for USB 2.0 ports. Connect the USB module cable to this connector, then install the module to a slot opening at the back of the system chassis. This USB connector complies with USB 2.0 specification that supports up to 480 Mbps connection speed.

USB34
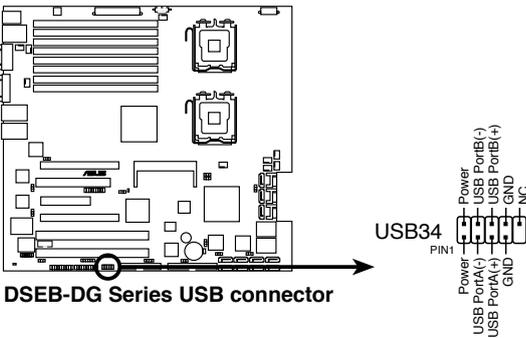

**DSEB-DG Series USB connector**

The USB port module is purchased separately.

10. **CPU and system fan connectors (4-pin CPU_FAN1/2, REAR_FAN1/2, FRNT_FAN1/2/3/4)**

The fan connectors support cooling fans of 350 mA ~ 740 mA (8.88 W max.) or a total of 3.15 A ~ 6.66 A (53.28 W max.) at +12V. Connect the fan cables to the fan connectors on the motherboard, making sure that the black wire of each cable matches the ground pin of the connector.

> DO NOT forget to connect the fan cables to the fan connectors. Insufficient air flow inside the system may damage the motherboard components. These are not jumpers! DO NOT place jumper caps on the fan connectors!

**DSEB-DG Series Fan connectors**
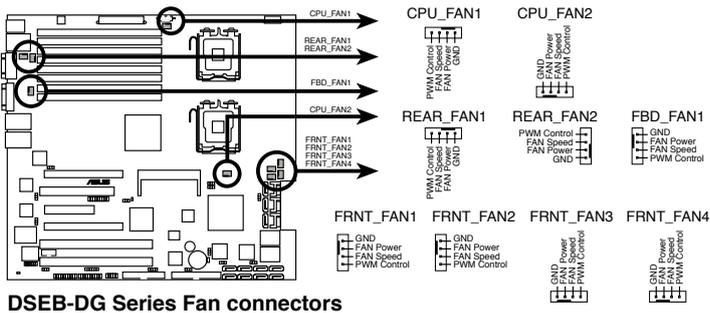

11. **Serial port connector (10-1 pin COM2)**

This connector is for a serial (COM) port. Connect the serial port module cable to this connector, then install the module to a slot opening at the back of the system chassis.

**DSEB-DG Series Serial port connectors**
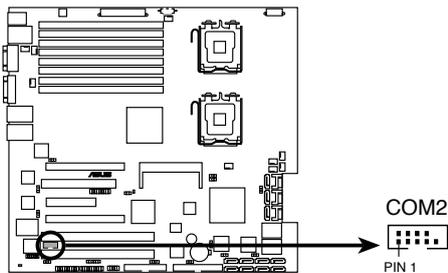

> The serial port module is purchased separately.

## 12. Power supply SMBus connector (5-pin PSUSMB1)

This connector is for the power supply SMB cable, if your power supply supports the SMBus function.

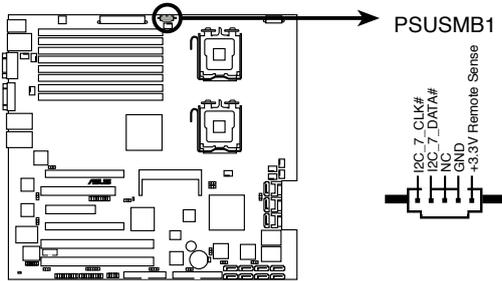

**DSEB-DG Series Power supply SMBus connector**

## 13. SSI power connectors (24-pin ATXPWR1, 8-pin ATX12V1, 4-pin ATX12V2)

These connectors are for SSI power supply plugs. The power supply plugs are designed to fit these connectors in only one orientation. Find the proper orientation and push down firmly until the connectors completely fit.

- • For a fully configured system, we recommend that you use an SSI 12 V-compliant power supply unit (PSU) for LGA771-socket Intel® Xeon Dual Core processors (Bensley platform).

- • DO NOT forget to connect the 24+8+4-pin power plugs; otherwise, the system will not boot up.

- • Use of a PSU with a higher power output is recommended when configuring a system with more power consuming devices. The system may become unstable or may not boot up if the power is inadequate.

- • You must install a PSU with a higher power rating if you intend to install additional devices.

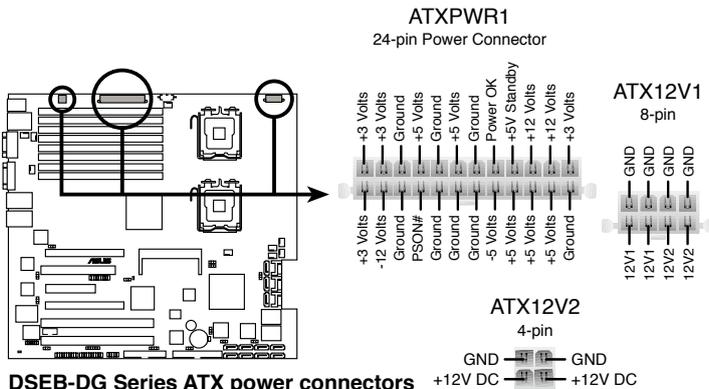

**DSEB-DG Series ATX power connectors**

**14. System panel connector (20-pin PANEL1)**

This connector supports several chassis-mounted functions.

The system panel connector is color-coded for easy connection.

PANEL1

PIN1

**DSEB-DG Series System panel connector**
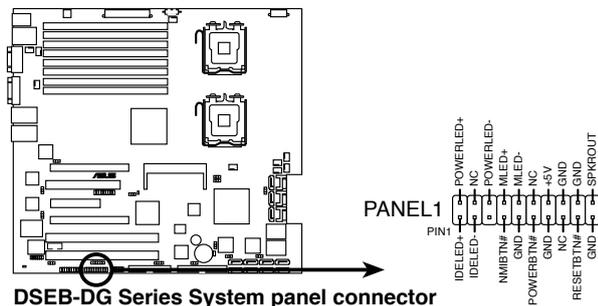

**1. System power LED (Green 3-pin PLED)**
This 3-pin connector is for the system power LED. Connect the chassis power LED cable to this connector. The system power LED lights up when you turn on the system power, and blinks when the system is in sleep mode.

**2. Message LED (Brown 2-pin MLED)**
This 2-pin connector is for the message LED cable that connects to the front message LED. The message LED is controlled by Hardware monitor to indicate an abnormal event occurance.

**3. System warning speaker (Orange 4-pin SPEAKER)**
This 4-pin connector is for the chassis-mounted system warning speaker. The speaker allows you to hear system beeps and warnings.

**4. Hard disk drive activity LED (Red 2-pin IDE_LED)**
This 2-pin connector is for the HDD Activity LED. Connect the HDD Activity LED cable to this connector. The IDE LED lights up or flashes when data is read from or written to the HDD.

**5. ATX power button/soft-off button (Green 2-pin PWRSW)**
This connector is for the system power button. Pressing the power button turns the system on or puts the system in sleep or soft-off mode depending on the BIOS settings. Pressing the power switch for more than four seconds while the system is ON turns the system OFF.

**6. Reset button (Blue 2-pin RESET)**
This 2-pin connector is for the chassis-mounted reset button for system reboot without turning off the system power.

**15. Auxiliary panel connector (20-pin AUX_PANEL1)**

This connector is for additional front panel features including front panel SMB, locator LED and switch, chassis intrusion, and LAN LEDs.

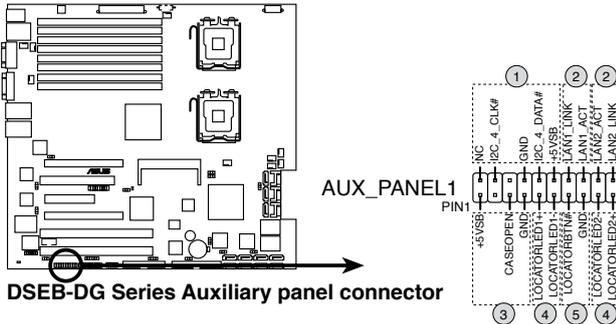

**DSEB-DG Series Auxiliary panel connector**

**1. Front panel SMB (6-1 pin FPSMB)**
These leads connect the front panel SMBus cable.

**2. LAN activity LED (2-pin LAN1_LED, LAN2_LED)**
These leads are for Gigabit LAN activity LEDs on the front panel.

**3. Chassis intrusion (4-1 pin CHASSIS)**
These leads are for the intrusion detection feature for chassis with intrusion sensor or microswitch. When you remove any chassis component, the sensor triggers and sends a high-level signal to these leads to record a chassis intrusion event. The default setting is short CASEOPEN and GND pin by jumper cap to disable the function.

**4. Locator LED (2-pin LOCATORLED1 and 2-pin LOCATORLED2)**
These leads are for the locator LED1 and LED2 on the front panel. Connect the Locator LED cables to these 2-pin connector. The LEDs will light up when the Locator button is pressed.

**5. Locator Button/Swich (2-pin LOCATORBTN)**
These leads are for the locator button on the front panel. This button queries the state of the system locator.

This chapter describes the power up
sequence, and ways of shutting down the
system.

# Powering up 3

# Chapter summary

3

# 3.1 Starting up for the first time

1.  After making all the connections, replace the system case cover.

2.  Be sure that all switches are off.

3.  Connect the power cord to the power connector at the back of the system chassis.

4.  Connect the power cord to a power outlet that is equipped with a surge protector.

5.  Turn on the devices in the following order:
    a. Monitor
    b. System power

6.  After applying power, the system power LED on the system front panel case lights up. For systems withATX power supplies, the system LED lights up when you press the ATX power button. If your monitor complies with "green" standards or if it has a "power standby" feature, the monitor LED may light up or switch between orange and green after the system LED turns on.

    The system then runs the power-on self tests or POST. While the tests are running, the BIOS beeps (see BIOS beep codes table below) or additional messages appear on the screen. If you do not see anything within 30 seconds from the time you turned on the power, the system may have failed a power-on test. Check the jumper settings and connections or call your retailer for assistance.

## Phoenix BIOS beep codes

| Beep Description | Error |
|---|---|
| Endless beep | Memory module missing |
| One continuous beep followed by two short beeps | VGA controller failure |
| Two short beeps | PCI resource assignment error |

7.  At power on, hold down the <Delete> key to enter the BIOS Setup. Follow the instructions in Chapter 4.

# 3.2 Turning off the computer

## 3.2.1 Using the OS shut down function

If you are using Windows® 2000/2003:

1. Click the **Start** button then click **Shut Down**...
2. Make sure that the **Shut Down** option button is selected, then click the **OK** button to shut down the computer.
3. The power supply should turn off after Windows® shuts down.

If you are using Windows® XP:

1. Click the **Start** button then select **Turn Off** Computer.
2. Click the **Turn Off** button to shut down the computer.
3. The power supply should turn off after Windows® shuts down.

## 3.2.2 Using the dual function power switch

While the system is ON, pressing the power switch for less than four seconds puts the system to sleep mode or to soft-off mode, depending on the BIOS setting. Pressing the power switch for more than four seconds lets the system enter the soft-off mode regardless of the BIOS setting.

This chapter tells how to change the
system settings through the BIOS Setup
menus. Detailed descriptions of the BIOS
parameters are also provided.

# BIOS setup *4*

# Chapter summary

# 4.1 Managing and updating your BIOS

The following utilities allow you to manage and update the motherboard Basic Input/Output System (BIOS) setup:

1. **ASUS AFUDOS** (Updates the BIOS in DOS mode using a bootable floppy disk.)

2. **ASUS CrashFree BIOS 3** (To recover the BIOS using a bootable floppy disk when the BIOS file fails or gets corrupted.)

Refer to the corresponding sections for details on these utilities.

> Save a copy of the original motherboard BIOS file to a bootable floppy disk in case you need to restore the BIOS in the future. Copy the original motherboard BIOS using the ASUS Update or AFUDOS utilities.

## 4.1.1 Creating a bootable floppy disk

1. Do either one of the following to create a bootable floppy disk.

   _DOS environment_

   a. Insert a 1.44MB floppy disk into the drive.

   b. At the DOS prompt, type `format A:/S` then press <Enter>.

   _Windows® XP/2003 environment_

   a. Insert a 1.44 MB floppy disk to the floppy disk drive.

   b. Click **Start** from the Windows® desktop, then select **My Computer**.

   c. Select the **3 ½ Floppy Drive** icon.

   d. Right click **File** from the menu, then select **Format**. **A Format 3½ Floppy Disk** window appears.

   e. Select **Create an MS-DOS startup disk** from the format options field, then click **Start**.

## 4.1.2    AFUDOS utility

The AFUDOS utility allows you to update the BIOS file in DOS environment using a bootable floppy disk with the updated BIOS file. This utility also allows you to copy the current BIOS file that you can use as backup when the BIOS fails or gets corrupted during the updating process.

### Copying the current BIOS

To copy the current BIOS file using the AFUDOS utility:

> • Make sure that the floppy disk is not write-protected and has at least 1024 KB free space to save the file.
>
> • The succeeding BIOS screens are for reference only. The actual BIOS screen displays may not be the same as shown.

1.    Copy the AFUDOS utility (afudos.exe) from the motherboard support CD to the bootable floppy disk you created earlier.

2.    Boot the system in DOS mode, then at the prompt type:

    **afudos /o[filename]**

    where the [filename] is any user-assigned filename not more than eight alphanumeric characters  for the main filename and three alphanumeric characters for the extension name.

```
A:\>afudos /oOLDBIOS1.rom
```

Main filename          Extension name

3.    Press <Enter>. The utility copies the current BIOS file to the floppy disk.

```
A:\>afudos /oOLDBIOS1.rom
AMI Firmware Update Utility - Version 1.19(ASUS V2.07(03.11.24BB))
Copyright (C) 2002 American Megatrends, Inc. All rights reserved.
   Reading flash ..... done
   Write to file...... ok
A:\>
```

The utility returns to the DOS prompt after copying the current BIOS file.

## Updating the BIOS file

To update the BIOS file using the AFUDOS utility:

1.    Visit the ASUS website (www.asus.com) and download the latest BIOS file for the motherboard. Save the BIOS file to a bootable floppy disk.

> Write the BIOS filename on a piece of paper. You need to type the exact BIOS filename at the DOS prompt.

2.    Copy the AFUDOS utility (afudos.exe) from the motherboard support CD to the bootable floppy disk you created earlier.

3.    Boot the system in DOS mode, then at the prompt, type:

    **afudos /i[filename]**

    where [filename] is the latest or the original BIOS file on the bootable floppy disk, then press <Enter>.

```
A:\>afudos /i8036A0.ROM
```

The utility verifies the file, then starts updating the BIOS file.

```
A:\>afudos /i8036A0.ROM
AMI Firmware Update Utility - Version 1.19(ASUS V2.07(03.11.24BB))

```

## Updating the BIOS file using a USB flash drive

If you have not purchased a USB floppy disk drive, you may  update the BIOS file using a USB flash drive. Format the USB flash drive to FAT16 or 32 system file before updating the BIOS.

To format the USB flash drive to a FAT32/16 system file:

1. Insert the USB flash drive to an available USB port.

2. From the Windows desktop, click **Start**, then select **My Computer**.

3. Right-click the USB flash drive icon, then select **Format** from the menu.

4. From the **File system** field, select **FAT32** or **FAT16**, then click the **Start** button.

To update the BIOS file:

1. Copy the original or the latest BIOS file and the AFUDOS utility  (afudos.exe) to the USB flash drive.

2. Insert the USB flash drive to an available USB port, then place the motherboard support CD to the optical drive.

3. Boot the system from the support CD, then select the **FreeDOS command prompt**.

4. At the DOS prompt, replace the prompt with the USB flash disk drive letter, then type: `afudos /i[filename].`

3. Follow the instructions in the previous section to update the BIOS file.

## 4.1.3 ASUS CrashFree BIOS 3 utility

The ASUS CrashFree BIOS 3 is an auto recovery tool that allows you to restore the BIOS file when it fails or gets corrupted during the updating process. You can update a corrupted BIOS file using a floppy disk or a USB flash drive that contains the updated BIOS file.

> Prepare a floppy disk or a USB flash drive containing the updated motherboard BIOS before using this utility.

### Recovering the BIOS from a floppy disk

To recover the BIOS from a floppy disk:

1. Turn the system.
2. Insert the floppy disk with the original or updated BIOS file to the floppy disk drive.
3. The utility will automatically recover the BIOS. It resets the system when the BIOS recovery finished.

### Recovering the BIOS from a USB flash drive

To recover the BIOS from a USB flash drive:

1. Remove any floppy disk from the floppy disk drive and turn the system.
2. Insert the USB flash drive with the original or updated BIOS file to one USB port on the system.
3. The utility will automatically recover the BIOS. It resets the system when the BIOS recovery finished.

> DO NOT shut down or reset the system while recovering the BIOS! Doing so would cause system boot failure!

> The recovered BIOS may not be the latest BIOS version for this motherboard. Visit the ASUS website (www.asus.com) to download the latest BIOS file.

# 4.2 BIOS setup program

This motherboard supports a programmable Low-Pin Count (LPC) chip that you can update using the provided utility described in section **4.1 Managing and updating your BIOS**.

Use the BIOS Setup program when you are installing a motherboard, reconfiguring your system, or prompted to "Run Setup." This section explains how to configure your system using this utility.

Even if you are not prompted to use the Setup program, you can change the configuration of your computer in the future. For example, you can enable the security password feature or change the power management settings. This requires you to reconfigure your system using the BIOS Setup program so that the computer can recognize these changes and record them in the CMOS RAM of the LPC chip.

The LPC chip on the motherboard stores the Setup utility. When you start up the computer, the system provides you with the opportunity to run this program. Press <Del> during the Power-On Self-Test (POST) to enter the Setup utility; otherwise, POST continues with its test routines.

If you wish to enter Setup after POST, restart the system by pressing <Ctrl+Alt+Delete>, or by pressing the reset button on the system chassis. You can also restart by turning the system off and then back on. Do this last option only if the first two failed.

The Setup program is designed to make it as easy to use as possible. Being a menu-driven program, it lets you scroll through the various sub-menus and make your selections from the available options using the navigation keys.

---

- • The default BIOS settings for this motherboard apply for most conditions to ensure optimum performance. If the system becomes unstable after changing any BIOS settings, load the default settings to ensure system compatibility and stability. Select the **Load Setup Defaults** item under the Exit Menu. See section **4.8 Exit Menu**.

- • The BIOS setup screens shown in this section are for reference purposes only, and may not exactly match what you see on your screen.

- • Visit the ASUS website (www.asus.com) to download the latest BIOS file for this motherboard.

---

## 4.2.1 BIOS menu screen

Menu items    Menu bar    Configuration fields    General help

```
                         BIOS SETUP UTILITY
 Main    Advanced     Server     Security     Boot     Exit

  System Date                  [Thu, 10/11/2007]    Use [ENTER], [TAB]
  System Time                  [11:07:30]           or [SHIFT-TAB] to
                                                    select a field.
  Floppy A                     [1.44 MB 3½"]
                                                    Use [+] or [-] to
                                                    configure system Date.
 ▶ IDE Configuration
 ▶ Primary IDE Master          [Not Detected]
 ▶ Primary IDE Slave           [Not Detected]
 ▶ Third IDE Master            [Not Detected]
 ▶ Third IDE Slave             [Not Detected]       ←→   Select Screen
 ▶ Fourth IDE Master           [Not Detected]       ↑↓   Select Item
 ▶ Fourth IDE Slave            [Not Detected]       +-   Change Field
                                                    Tab  Select Field
 ▶ System Information                                F1   General Help
                                                    F10  Save and Exit
                                                    ESC  Exit

          V02.61 (C)Copyright 1985-2006, American Megatrends, Inc.
```

Sub-menu items    Navigation keys

## 4.2.2 Menu bar

The menu bar on top of the screen has the following main items:

**Main**          For changing the basic system configuration

**Advanced**      For changing the advanced system settings

**Server**         For changing the advanced server options

**Security**       For changing the advanced system security options

**Boot**           For changing the system boot configuration

**Exit**           For selecting the exit options and loading default settings

To select an item on the menu bar, press the right or left arrow key on the keyboard until the desired item is highlighted.

## 4.2.3 Navigation keys

At the bottom right corner of a menu screen are the navigation keys for that particular menu. Use the navigation keys to select items in the menu and change the settings.

Some of the navigation keys differ from one screen to another.

### 4.2.4 Menu items

The highlighted item on the menu bar  displays the specific items for that menu. For example, selecting Main shows the Main menu items.

The other items (Advanced, Power, Boot, and Exit) on the menu bar have their respective menu items.

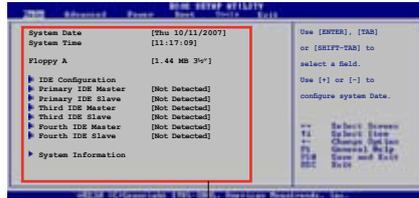

**Main menu items**

### 4.2.5 Sub-menu items

A solid triangle before each item on any menu screen means that the iteam has a sub-menu. To display the sub-menu, select the item and press <Enter>.

### 4.2.6 Configuration fields

These fields show the values for the menu items. If an item is user-configurable, you can change the value of the field opposite the item. You cannot select an item that is not user-configurable.

A configurable field is enclosed in brackets, and is highlighted when selected. To change the value of a field, select it then press <Enter> to display a list of options. Refer to **4.2.7 Pop-up window**.

### 4.2.7 Pop-up window

Select a menu item then press <Enter> to display a pop-up window with the configuration options for that item.

### 4.2.8 Scroll bar

A scroll bar appears on the right side of a menu screen when there are items that do not fit on the screen. Press the Up/Down arrow keys or <Page Up> /<Page Down> keys to display the other items on the screen.

**Pop-up window**

**Scroll bar**

### 4.2.9 General help

At the top right corner of the menu screen is a brief description of the selected item.

# 4.3    Main menu

When you enter the BIOS Setup program, the Main menu screen appears, giving you an overview of the basic system information.

Refer to section **4.2.1 BIOS menu screen** for information on the menu screen items and how to navigate through them.

```
                              BIOS SETUP UTILITY
   Main      Advanced     Server     Security     Boot     Exit

  System Date                    [Thu, 10/11/2007]        Use [ENTER], [TAB]
  System Time                    [11:07:30]               or [SHIFT-TAB] to
                                                          select a field.
  Floppy A                       [1.44 MB 3½"]
                                                          Use [+] or [-] to
                                                          configure system Date.
  ▶ IDE Configuration
  ▶ Primary IDE Master           [Not Detected]
  ▶ Primary IDE Slave            [Not Detected]
  ▶ Third IDE Master             [Not Detected]
  ▶ Third IDE Slave              [Not Detected]           ←→   Select Screen
  ▶ Fourth IDE Master            [Not Detected]           ↑↓    Select Item
  ▶ Fourth IDE Slave             [Not Detected]           Enter Go to Sub Screen
                                                          F1   General Help
  ▶ System Information                                    F10  Save and Exit
                                                          ESC  Exit

           V02.61 (C)Copyright 1985-2006, American Megatrends, Inc.
```

## 4.3.1    System Date [Day xx/xx/xxxx]

Allows you to set the system date.

## 4.3.2    System Time [xx:xx:xx]

Allows you to set the system time.

## 4.3.3    Floppy A [1.44 MB 3½"]

Sets the type of floppy drive installed.
Configuration options: [Disabled] [360 KB 5¼"] [1.2 MB 5.¼"] [720 KB 3½"]
[1.44 MB 3½"] [2.88 MB 3½"]

## 4.3.4    IDE Configuration

The items in this menu allow you to set or change the configurations for the IDE devices installed in the system. Select an item then press <Enter> if you wish to configure the item.

```
                              BIOS SETUP UTILITY
  Main

  IDE Configuration                                          Options

  ATA/IDE Configuration            [Enhanced]           Disabled
    Configure SATA as              [IDE]                Enabled

  Hard Disk Write Protect          [Disabled]
  IDE Detect Time Out (Sec)        [35]
  ATA(PI) 80Pin Cable Detection    [Host & Device]
                                                     ←→   Select Screen
                                                     ↑↓   Select Item
                                                     +-   Change Option
                                                     F1   General Help
                                                     F10  Save and Exit
                                                     ESC  Exit

       V02.61 (C)Copyright 1985-2006, American Megatrends, Inc.
```
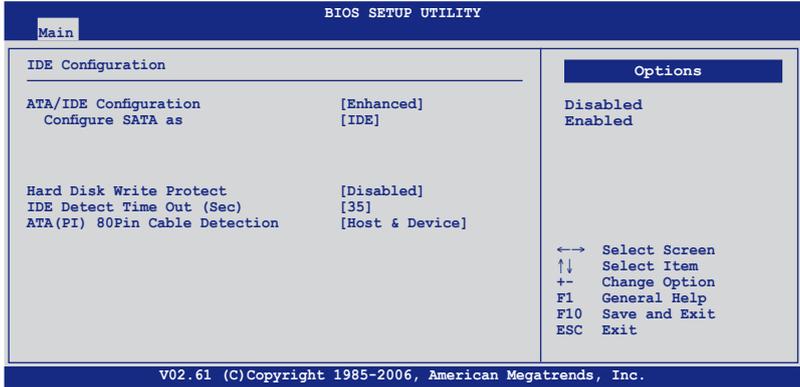

### ATA/IDE Configuration [Enhanced]

Configuration options: [Disabled] [Compatible] [Enhanced]

*Configure SATA as [IDE]*
Sets the configuration for the Serial ATA connectors supported by the Southbridge chip.

The AHCI allows the onboard storage driver to enable advanced Serial ATA features that increases storage performance on random workloads by allowing the drive to internally optimize the order of commands.

If you want to create a RAID 0, RAID 1, RAID 5,  RAID 10, or the Intel® Matrix Storage Technology configuration from the Serial ATA hard disk drives, set this item to [RAID].

If you want to use the Serial ATA hard disk drives as Parallel ATA physical storage devices, keep the defaul setting [IDE].

If you want the Serial ATA hard disk drives to use the Advanced Host Controller Interface (AHCI), set this item to [AHCI].

### Hard Disk Write Protect [Disabled]

Disables or enables device write protection. This will be effective only if device is accessed through BIOS. Configuration option: [Disabled] [Enabled]

### IDE Detect Time Out (Sec) [35]

Selects the time out value for detecting ATA/ATAPI devices.
Configuration options: [0] [5] [10] [15] [20] [25] [30] [35]

## ATA(PI) 80Pin Cable Detection [Host & Device]

Allows you to select the mode for detecting 80-pin ATA(PI) cable.
Configuration options: [Host & Device] [Host] [Device]

## 4.3.5    Primary/Third/Fourth IDE Master/Slave

The BIOS automatically detects the connected IDE devices. There is a separate
sub-menu for each IDE device. Select a device item, then press <Enter> to display
the IDE device information.

```
                        BIOS SETUP UTILITY
  Main

  Primary IDE Master                              Disabled: Disables LBA
                                                  Mode.
  Device   :Hard Disk                             Auto: Enables LBA
  Vendor   :xxxxxxxxx                             Mode if the device
  Size     :xx.xGB                                supports it and the
  LBA Mode :Supported                             device is not already
  Block Mode:16Sectors                            formatted with LBA
  PIO Mode  :4                                    Mode disabled.
  Async DMA :MultiWord DMA-2
  Ultra DMA :Ultra DMA-6
  S.M.A.R.T.:Supported

  Type                        [Auto]              ←→   Select Screen
  LBA/Large Mode              [Auto]              ↑↓   Select Item
  Block(Multi-sector Transfer) [Auto]             +-   Change Option
  PIO Mode                    [Auto]              F1   General Help
  DMA Mode                    [Auto]              F10  Save and Exit
  S.M.A.R.T.                  [Auto]              ESC  Exit
  32Bit Data Transfer         [Enabled]

        V02.61 (C)Copyright 1985-2006, American Megatrends, Inc.
```

The BIOS automatically detects the values opposite the dimmed items (Device,
Vendor, Size, LBA Mode, Block Mode, PIO Mode, Async DMA, Ultra DMA, and
S.M.A.R.T. monitoring). These values are not user-configurable. These items show
N/A if no IDE device is installed in the system.

## Type [Auto]

Selects the type of IDE drive. Setting to [Auto] allows automatic selection of the
appropriate IDE device type. Select [CDROM] if you are specifically configuring a
CD-ROM drive. Select [ARMD] (ATAPI Removable Media Device) if your device is
either a ZIP, LS-120, or MO drive.
Configuration options: [Not Installed] [Auto] [CD/DVD] [ARMD]

## LBA/Large Mode [Auto]

Enables or disables the LBA mode. Setting to [Auto] enables the LBA mode if the
device supports this mode, and if the device was not previously formatted with LBA
mode disabled. Configuration options: [Disabled] [Auto]

### Block (Multi-sector Transfer) [Auto]

Enables or disables data multi-sectors transfers. When set to [Auto], the data transfer from and to the device occurs multiple sectors at a time if the device supports multi-sector transfer feature. When set to [Disabled], the data transfer from and to the device occurs one sector at a time.
Configuration options: [Disabled] [Auto]

### PIO Mode [Auto]

Allows you to select the data transfer mode.
Configuration options: [Auto] [0] [1] [2] [3] [4]

### DMA Mode [Auto]

Sets the DMA mode.
Configuration options: [Auto] [SWDMA0] [SWDMA1] [SWDMA2] [MWDMA0] [MWDMA1] [MWDMA2] [UDMA0] [UDMA1] [UDMA2] [UDMA3] [UDMA4]

### S.M.A.R.T. [Auto]

Sets the Smart Monitoring, Analysis, and Reporting Technology.
Configuration options: [Auto] [Disabled] [Enabled]

### 32Bit Data Transfer [Enabled]

Enables or disables 32-bit data transfer.
Configuration options: [Disabled] [Enabled]

## 4.3.6    System Information

This menu gives you an overview of the general system specifications. The BIOS automatically detects the items in this menu.

```
                        BIOS SETUP UTILITY
    Main

    System Information

    Model Name   ASUS DSEB-DG
    Model ID     8053A0

    ASUS-BIOS
    Version      1000.006

                                                            F10  Save and Exit
                                                            ESC  Exit

           V02.61 (C)Copyright 1985-2006, American Megatrends, Inc.
```

### Ratio CMOS Setting [12]

Whether this item is configurable depends on your CPU type. The valid value ranges differently according to your CPU type. If this item is configurable, enter the value using the numeric keypad.

### Hardware Prefetcher [Enabled]

Enable this item to use the Hardware Prefetcher Disable Feature.
Configuration options: [Disabled] [Enabled]

### *Adjacent Cache Line Prefetch [Enabled]

Configuration options: [Disabled] [Enabled]

### Max CPUID Value Limit [Disabled]

Setting this item to [Enabled] allows legacy operating systems to boot even without support for CPUs with extended CPUID functions.
Configuration options: [Disabled] [Enabled]

### Virtualization Technology [Enabled]

The Vanderpool Virtualization Technology allows a hardware platform to run multiple operating systems separately, enabling one system to virtually function as several systems. Configuration options: [Disabled] [Enabled]

### Execute-Disable Bit Capability [Enabled]

Allows you to enable or disable the No-Execution Page Protection Technology. Setting this item to [Disabled] forces the XD feature flag to always return to zero (0). Configuration options: [Disabled] [Enabled]

### Hyper Threading Technology [Enabled]

Allows you to enable or disable the Intel® Hyper-Threading Technology feature.
Configuration options: [Disabled] [Enabled]

### C1E Support [Enabled]

Allows you to enable or disable C1E support.
Configuration options: [Enabled] [Disabled]

### CPU TM function [Enabled]

This function enables the overheated CPU to throttle the clock speed to cool down.
Configuration options: [Disabled] [Enabled]

### Execute-Disable Bit [Enabled]

When this item is set to [Disabled], the BIOS forces the XD feature flag to always return to zero (0). Configuration options: [Enabled] [Disabled]

### Intel(R) SpeedStep(tm) tech. [Enabled]

Allows you to enable or disable the Intel SpeedStep Technology. Refer to the Appendix for more information on the Intel SpeedStep Technology.
Configuration options: [Disabled] [Enabled]

Items above with * mark are for technical personnel to debug only.

## 4.4.2    Chipset Configuration

The Chipset configuration menu allows you to change advanced chipset settings.
Select an item then press <Enter> to display the sub-menu.

```
                          BIOS SETUP UTILITY
        Advanced

   Advanced Chipset Configuration                     Configure North Bridge
                                                      features.
   WARNING: Seting wrong values in below sections
            may cause system to malfunction.

   ▶   North Bridge Configuration
   ▶   Intel VT-d Configuration                       ←→   Select Screen
   ▶   South Bridge Configuration                     ↑↓   Select Item
                                                      EnterGo to Sub Screen
                                                      F1   General Help
                                                      F10  Save and Exit
                                                      ESC  Exit

           V02.61 (C)Copyright 1985-2006, American Megatrends, Inc.
```
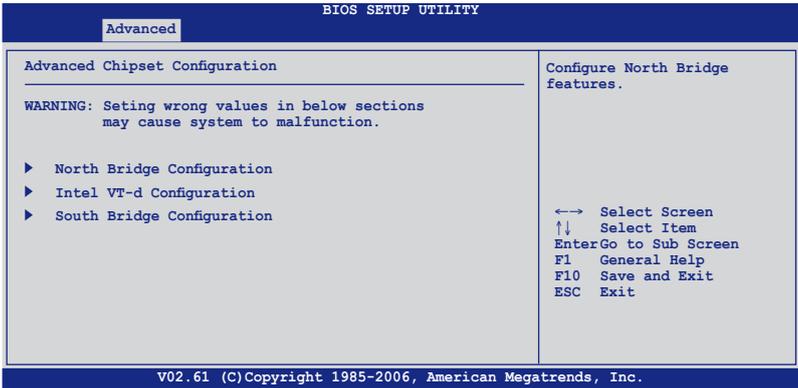

## *North Bridge Configuration*

The North Bridge Configuration menu allows you to change the Northbridge
settings.

```
                          BIOS SETUP UTILITY
        Advanced

   NorthBridge Chipset Configuration                  Sequencing:
                                                       allocates address
                                                       branch 0 then 1.
   MCH Branch Mode              [Branch Interleave]   Interleaving:
   Patrol Scrubbing            [Enabled]               interleaves branch
   Demand Scrubbing            [Disabled]              across branches.
   Branch Dependent Sparing    [Disabled]            Mirroring:
   Branch 0                    [Enabled]               mirrors branch space
   Branch Specific Sparing     [Disabled]             between branches.
   Rank Interleaving           [4:1]                 Single Channel:
   Branch 1                    [Enabled]               forces single ch-0.
   Branch Specific Sparing     [Disabled]
   Rank Interleaving           [4:1]
   MemCool Mode                [Disabled]             ←→   Select Screen
                                                      ↑↓   Select Item
   Intel QuickData Tech.       [Disabled]             +-   Change Option
   PCIe Link Speed             [Auto]                 F1   General Help
   PCIE1 Slot Payload Size     [128B]                 F10  Save and Exit
   PCIE4 Slot Payload Size     [Auto]                 ESC  Exit

           V02.61 (C)Copyright 1985-2006, American Megatrends, Inc.
```

### MCH Branch Mode [Branch Interleave]

Allows you to select the MCH branch mode.
Configuration options: [Branch Sequencing] [Branch Interleave] [Branch Mirroring]
[Single Channel 0]

### Patrol Scrubbing [Enabled]

Enables or disables the Patrol Scrubbing.
Configuration options: [Disabled] [Enabled]

### Demand Scrubbing [Enabled]

Enables or disables the Demand Scrubbing.
Configuration options: [Disabled] [Enabled]

### Branch Dependent Sparing [Disabled]

Allows you to enable or disabled the branch-dependent DIMM sparing feature.
Configuration options: [Disabled] [Enabled]

### Branch 0 [Enabled]

Allows you to enable or disable the Branch 0. If you set this item to [Disabled], the following three items will be grayed out.
Configuration options: [Disabled] [Enabled]

### Branch Specific Sparing [Disabled]

Allows you to enable or disable the DIMM sparing feature.
Configuration options: [Disabled] [Enabled]

### Rank Interleaving [4:1]

Allows you to select the Branch 0 Rank Interleave.
Configuration options: [1:1] [2:1] [4:1]

### Branch 1 [Enabled]

Allows you to enable or disable the Branch 1. If you set this item to [Disabled], **Branch 0** and the following two items will be grayed out.
Configuration options: [Disabled] [Enabled]

### Branch Specific Sparing [Disabled]

Allows you to enable or disable the DIMM sparing feature.
Configuration options: [Disabled] [Enabled]

### Rank Interleaving [4:1]

Allows you to select the Branch 1 Rank Interleave.
Configuration options: [1:1] [2:1] [4:1]

### MemCool Mode [Disabled]

Allows you to enable or disable the MemCool Mode.
Configuration options: [Disabled] [Enabled]

### Intel QuickData Tech. [Disabled]

Allows you to enable or disable Intel QuickData Tech. function.
Configuration options: [Enabled] [Disabled]

### PCIe Link Speed [Auto]

Allows you to set the PCIe link speed. When set to [Auto], the PCIe device runs at the speed depending on the capability of the PCI Express port of MCH. When set to [PCIe Gen1], the target link speed will be forced to meet the PCIe Gen1 specification. Configuration options: [Auto] [PCIe Gen1]

### PCIE1 Slot Payload Size [128B]

Allows you to set the maximum TLP payload size for the PCI Express port. Configuration options: [Auto] [128B] [256B]

### PCIE4 Slot Payload Size [Auto]

Allows you to set the maximum TLP payload size for the PCI Express port. Configuration options: [Auto] [128B] [256B]

## *Inel VT-d Configuration*

```
                            BIOS SETUP UTILITY
        Advanced

                                               F10  Save and Exit
                                               ESC  Exit

        V02.61 (C)Copyright 1985-2006, American Megatrends, Inc.
```
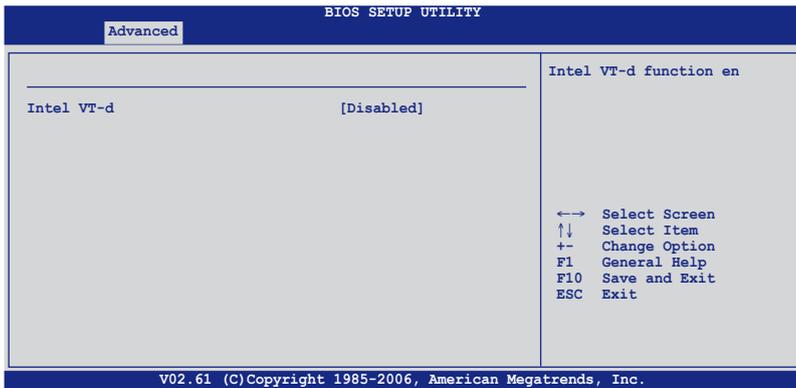

### Intel VT-d [Disabled]

Allows you to enable or disable Intel VT-d function.
Configuration options: [Disabled] [Enabled]

## *South Bridge Configuration*

The SouthBridge Configuration menu allows you to change the Southbridge settings.

```
                            BIOS SETUP UTILITY
            Advanced

    South Bridge Chipset Configuration              ESB2 Bus-M PCI-X Hub
                                                    configuration options.
    ▶    ESB2 PCI-X Hub Configuration
```

### ESB2 PCI-X Hub Configuration

```
                            BIOS SETUP UTILITY
            Advanced

    Configure advanced settings for ESB2 PCI-X Hub      This question will
                                                        allow to select the
                                                        maximum PCI bus speed
    PCI Bus Frequency              [Auto]               to be programmed.
    I/O Port Decode                [4K Decode]          Default will always
    RAS Sticky Error Handling      [Clear Errors]       be set to AUTO where
    VGA 16-Bit Decode              [Enabled]            bus speed will be
                                                        decided based on the
                                                        capabilities of the
                                                        device on that bus.

                                                        ←→    Select Screen
                                                        ↑↓    Select Item
                                                        +-    Change Option
                                                        F1    General Help
                                                        F10   Save and Exit
                                                        ESC   Exit

             V02.61 (C)Copyright 1985-2006, American Megatrends, Inc.
```

### *PCI Bus Frequency [Auto]*
Allows you to select the PCI bus speed. When you set this item to [Auto], the device will run at the speed based on its capability.
Configuration options: [Auto] [33 Mhz PCI] [66 Mhz PCI] [66 Mhz PCI-X M1]
[100 Mhz PCI-X M1] [133 Mhz PCI-X M1] [66 Mhz PCI-X M2]
[100 Mhz PCI-X M2] [133 Mhz PCI-X M2]

### *I/O Port Decode [4K Decode]*
Allows you to select the decode range for I/O ports.
Configuration options: [4K Decode] [1K Decode]

### *RAS Sticky Error Handling [Clear Errors]*
Allows you to select the method of handling the Sticky RAS errors.
Configuration options: [Clear Errors] [Leave Errors]

### *VGA 16-Bit Decode [Enabled]*
Allows you to enable or disable the decoding of VGA for the devices behind PXH. Configuration options: [Disabled] [Enabled]

## 4.4.3    PCI PnP

The PCI PnP menu items allow you to change the advanced settings for PCI/PnP devices. The menu includes setting IRQ and DMA channel resources for either PCI/PnP or legacy ISA devices, and setting the memory size block for legacy ISA devices.

⚠️ Take caution when changing the settings of the PCI PnP menu items. Incorrect field values can cause the system to malfunction.

```
                           BIOS SETUP UTILITY
        Advanced

   PCI/PnP Configuration                            Clear ESCD during
                                                    System Boot.
   Reset Configuration Data            [No]
   Plug & Play O/S                     [No]
   Palette Snooping                    [Disabled]

   ▶  Onboard LAN1 Configuration
   ▶  Onboard LAN2 Configuration
   ▶  Onboard LAN3 Configuration                    ←→   Select Screen
   ▶  Onboard LAN4 Configuration                    ↑↓   Select Item
                                                    +-   Change Field
   ▶  PCI-Express Slot 1 Configuration              Tab  Select Field
   ▶  PCI Slot 2 Configuration                      F1   General Help
   ▶  PCI-Express Slot 3 Configuration              F10  Save and Exit
   ▶  PCI-Express Slot 4 Configuration              ESC  Exit
   ▶  PCI-X Slot 5 Configuration
   ▶  PCI-X Slot 6 Configuration

          V02.61 (C)Copyright 1985-2006, American Megatrends, Inc.
```

### Reset Configuration Data [No]

Clears the non-volatile RAM (NVRAM) during boot.
Configuration options: [No] [Yes]

### Plug And Play O/S [No]

When set to [No], BIOS configures all the devices in the system. When set to [Yes] and if you install a Plug and Play operating system, the operating system configures the Plug and Play devices not required for boot.
Configuration options: [No] [Yes]

### Palette Snooping [Disabled]

When set to [Enabled], the pallete snooping feature informs the PCI devices that an ISA graphics device is installed in the system so that the latter can function correctly. Configuration options: [Disabled] [Enabled]

## Onboard LAN1/2/3/4 Configuration

```
                           BIOS SETUP UTILITY
              Advanced

    Onboard LAN Configuration                          Initialize device
                                                        expansion ROM.
    Option ROM Scan                    [Enabled]
    Option ROM Priority                [Normal]
    Bus Master                         [Enabled]
    Latency Timer                      [Default]
```

*Option ROM Scan: [Enabled]*
Allows you to enable or disable the device expansion ROM.
Configuration options: [Disabled] [Enabled]

*Option ROM Priority [Normal]*
Allows you to set the option ROM priority.
Configuration options: [Low] [Normal] [High] [Highest]

*Bus Master [Enabled]*
Set this item to [Enabled] to enable the selected device as a PCI bus master.

*Latency Timer [Default]*
Allows you to set the PCI device latency timer register.
Configuration options: [Default] [32] [64] [96] [128] [160] [192] [224]

## PCI-Express Slot1/3/4; PCI Slot 2; PCI-X Slot 5/6 Configuration

```

              Advanced

    PCI-Express Slot 1 Configuration                    Initialize device
                                                        expansion ROM.
    Option ROM Scan                    [Enabled]
    Option ROM Priority                [Normal]
    Bus Master                         [Enabled]
    Latency Timer                      [Default]
```

*Option ROM Scan: [Enabled]*
Allows you to enable or disable the device expansion ROM.
Configuration options: [Disabled] [Enabled]

*Option ROM Priority [Normal]*
Allows you to set the option ROM priority.
Configuration options: [Low] [Normal] [High] [Highest]

*Bus Master [Enabled]*
Set this item to [Enabled] to enable the selected device as a PCI bus master.

*Latency Timer [Default]*
Allows you to set the PCI device latency timer register.
Configuration options: [Default] [32] [64] [96] [128] [160] [192] [224]

## 4.4.4    USB Configuration

The items in this menu allows you to change the USB-related features. Select an item then press <Enter> to display the configuration options.

```
                              BIOS SETUP UTILITY
         Advanced

 USB Configuration                                    USB port5~6 for
 ────────────────────────────────────────            ASMB3.

 USB Devices Enabled:
            None

 USB Functions               [Disabled]
 Legacy USB Support          [Enabled]
 USB 2.0 Controller Mode     [FullSpeed]
 BIOS EHCI Hand-Off          [Enabled]
                                                   ←→   Select Screen
                                                   ↑↓   Select Item
                                                   +-   Change Option
                                                   F1   General Help
                                                   F10  Save and Exit
                                                   ESC  Exit

             V02.61 (C)Copyright 1985-2006, American Megatrends, Inc.
```
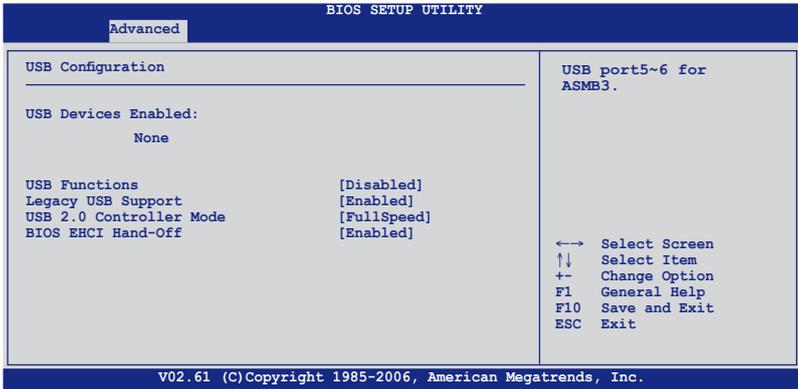

The **USB Devices Enabled** item shows the auto-detected values. If no USB device is detected, the item shows None.

### USB Functions [Enabled]

Allows you to enable the USB host controller.
Configuration options: [Disabled] [2 USB ports] [4 USB ports] [6 USB ports]

The following item appears only when you set **USB Function** to [2 USB ports] [4 USB ports] [6 USB ports].

### Legacy USB Support [Enabled]

Allows you to enable or disable support for legacy USB devices. Setting to [Auto] allows the system to detect the presence of USB devices at startup. If detected, the USB controller legacy mode is enabled. If no USB device is detected, the legacy USB support is disabled. Configuration options: [Disabled] [Enabled] [Auto]

The following items appear when you set **Legacy USB Support** to [Enabled] or [Auto]

### BIOS EHCI Hand-Off [Enabled]

Enables or disables the BIOS EHCI hand-off support.
Configuration options: [Disabled] [Enabled]

## 4.4.5    Peripheral Configuration

```
                          BIOS SETUP UTILITY
            Advanced

   Peripheral Configuration                          Allows BIOS to Enable
   ───────────────────────────────────────           or Disable Floppy
   OnBoard Floppy Controller        [Enabled]         Controller.
   Serial Port1 Address             [3F8/IRQ4]
   Serial Port2 Address             [2F8/IRQ3]

                                                     ←→   Select Screen
                                                     ↑↓   Select Item
                                                     +-   Change Option
                                                     F1   General Help
                                                     F10  Save and Exit
                                                     ESC  Exit

          V02.61 (C)Copyright 1985-2006, American Megatrends, Inc.
```
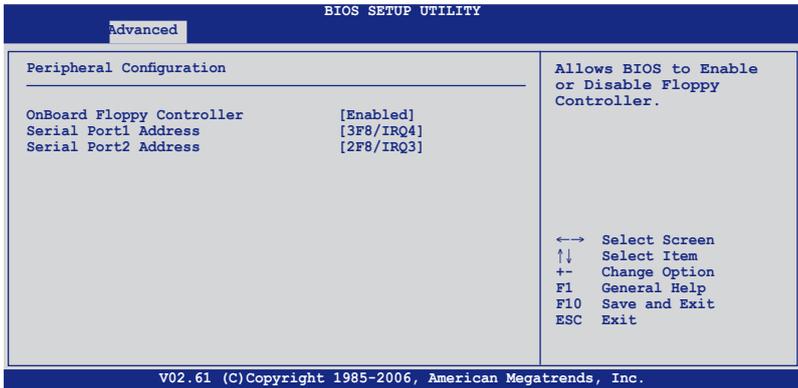

### OnBoard Floppy Controller [Enabled]

Enables or disables the onboard floppy controller.
Configuration options: [Disabled] [Enabled]

### Serial Port1 Address [3F8/IRQ4]

Allows you to select the Serial Port1 base address.
Configuration options: [Disabled] [3F8/IRQ4] [3E8/IRQ4] [2E8/IRQ3]

### Serial Port2 Address [2F8/IRQ3]

Allows you to select the Serial Port2 base address.
Configuration options: [Disabled] [2F8/IRQ3] [3E8/IRQ4] [2E8/IRQ3]

## 4.4.6 ACPI Configuration

```
                          BIOS SETUP UTILITY
      Advanced

  ACPI Configuration                                   Enabled, BIOS will
  ─────────────────────────────────                    report ACPI MCFG Table
                                                        Disabled, BIOS don't
  ACPI MCFG Support              [Disabled]             report.
  High Precision Event Timer     [N/A]
                                                        ACPI MCFG Table:
                                                        Create PCI Express
                                                        memory-mapped
                                                        configuration space
                                                        base address
                                                        description table.

                                                        ←→   Select Screen
                                                        ↑↓   Select Item
                                                        +-   Change Option
                                                        F1   General Help
                                                        F10  Save and Exit
                                                        ESC  Exit

          V02.61 (C)Copyright 1985-2006, American Megatrends, Inc.
```

### ACPI MCFG Support [Enabled]

Enables or disables the ACPI MCFG support. When this item is set to [Enabled], the BIOS will report the ACPI MCFG table.
Configuration options: [Disabled] [Enabled]

### High Precision Event Timer [N/A]

Allows you to enable or disable the High Precision Event Timer.
Configuration options: [Disabled] [Enabled]

## 4.4.7 Power On Configuration

This sub-menu allows you to change Power On Configuration features. Select an item then press <Enter> to display the configuration options.

```
                              BIOS SETUP UTILITY
        Advanced

```
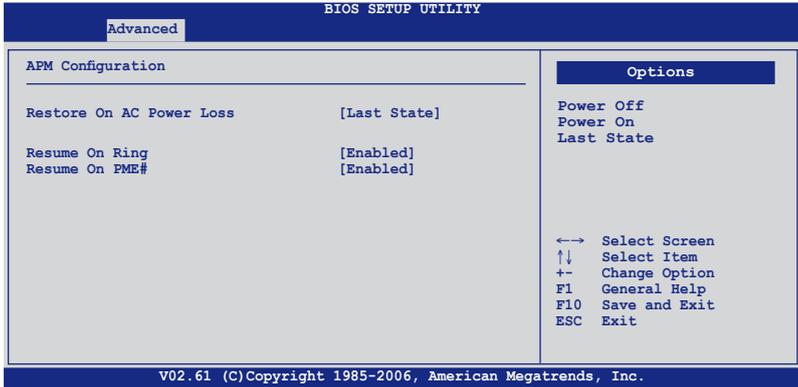

### Restore on AC Power Loss [Last State]

When set to [Power Off], the system goes into off state after an AC power loss. When set to [Power On], the system will reboot after an AC power loss. When set to [Last State], the system goes into either off or on state, whatever the system state was before the AC power loss.
Configuration options: [Power Off] [Power On] [Last State]

### Resume On Ring [Enabled]

When set to [Enabled], the system will generate a wake event when the external modem receives a call while the computer is in Soft-off mode.
Configuration options: [Disabled] [Enabled]

### Resume On PME# [Enabled]

When set to [Enabled], the system enables the PME to generate a wake event while the computer is in Soft-off mode.
Configuration options: [Disabled] [Enabled]

## 4.4.8    Hardware Monitor

```
                          BIOS SETUP UTILITY

        V02.61 (C)Copyright 1985-2006, American Megatrends, Inc.
```
### CPU1/CPU2 Temperature [xxxºC/xxxºF]
### System1/2 Temperature [xxxºC/xxxºF]

The onboard hardware monitor automatically detects and displays the motherboard
and CPU temperatures. Select [Ignored] if you do not wish to display the detected
temperatures. The CPU2 Temperature shows N/A if no processor is installed in
CPU2 socket.

### CPU_Fan1/2; FRNT_FAN1/2/3/4 Speed [xxxxRPM] or [N/A]
### REAR_FAN1/2; FBD_Fan Speed [xxxxRPM] or [N/A]

The onboard hardware monitor automatically detects and displays the CPU, front,
rear and FBD fan speed in rotations per minute (RPM). If the fan is not connected
to the motherboard, the field shows N/A.

### Smart Fan Control [Disabled]

Allows you to enable or disable the ASUS Smart Fan feature that smartly adjusts
the fan speeds for more efficient system operation.
Configuration options: [Disabled] [Smart Fan] [Smart Fan II]

*System1/2 Target Temperature [45]*

Allows you to set the system target temperature.
Configuration options: [35]~[55]

**VCORE1 Voltage, VCORE2 Voltage, VTT Voltage, 1.5V Voltage, 1.8V Voltage, 3.3V Voltage, 5V Voltage, 5VSB Voltage, 12V Voltage, VBAT Voltage**

The onboard hardware monitor automatically detects the voltage output through the onboard voltage regulators. The VCORE2 item shows N/A if no processor is installed in CPU2 socket.

                                                    F1    General Help
                                                    F10   Save and Exit
                                                    ESC   Exit

       V02.61 (C)Copyright 1985-2006, American Megatrends, Inc.
```
### Remote Access [Disabled]

Enables or disables the remote access feature.
Configuration options: [Disabled] [Enabled]

> The following items appear only when **Remote Access** is set to [Enabled].

### Serial port number [COM2]

Selects the serial port for console redirection.
Configuration options: [COM1] [COM2]

### Baudrate [115200 8,n,1]

Sets the baudrate. Configuration options: [115200 8,n,1] [57600 8,n,1]
[38400 8,n,1] [19200 8,n,1]

### Flow Control [None]

Allows you to select the flow control for console redirection.
Configuration options: [None] [Hardware] [Software]

### Redirection After BIOS POST [Disabled]

Sets the redirection mode after the BIOS Power-On Self-Test (POST). Some
operating system may not work when set to Always.
Configuration options: [Disabled] [Boot Loader] [Always]

### Terminal Type [ANSI4]

Allows you to select the target terminal type.
Configuration options: [ANSI4] [VT100] [VT-UTF83] [Extended VT100]

### VT-UTF8 Combo Key Support [Disabled]

Enables or disables the VT-UTF8 combo key support for ANSI or VT100 terminals.
Configuration options: [Disabled] [Enabled]

# 4.6    Security

The Security menu items allow you to change the system security settings. Select an item then press <Enter> to display the configuration options.

   Change Supervisor Password

   Flash Write                     [Disabled]

                                                          ←→   Select Screen
                                                          ↑↓   Select Item
                                                          Enter Change
                                                          F1   General Help
                                                          F10  Save and Exit
                                                          ESC  Exit

            V02.61 (C)Copyright 1985-2006, American Megatrends, Inc.
```
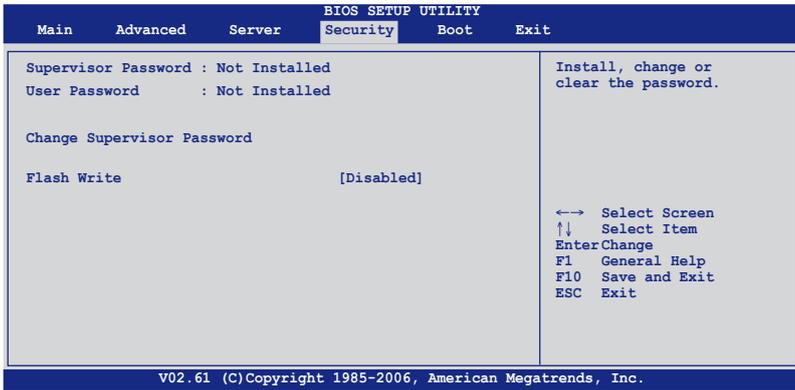

## Change Supervisor Password

Select this item to set or change the supervisor password. The **Supervisor Password** item on top of the screen shows the default **Not Installed**. After you set a password, this item shows **Installed**.

To set a Supervisor Password:

1.    Select the **Change Supervisor Password** item and press <Enter>.
2.    From the password box, type a password composed of at least six letters and/or numbers, then press <Enter>.
3.    Confirm the password when prompted.

The message "Password Installed" appears after you successfully set your password.

To change the supervisor password, follow the same steps as in setting a user password.

To clear the supervisor password, select the **Change Supervisor Password** then press <Enter>. The message "Password Uninstalled" appears.

> If you forget your BIOS password, you can clear it by erasing the CMOS Real Time Clock (RTC) RAM. See section **2.6 Jumper** for information on how to erase the RTC RAM.

After you have set a supervisor password, the other items appear to allow you to change other security settings.

```
                              BIOS SETUP UTILITY
    Main     Advanced    Server    Security    Boot    Exit

   Supervisor Password : Installed                      Install, change or
   User Password       : Not Installed                  clear the password.

   Change Supervisor Password
   Change User Password
   Password Check               [Setup]

   Password Lock Mode           [Disabled]
   Removable Device Boot        [Enabled]
   Flash Write                  [Enabled]
```
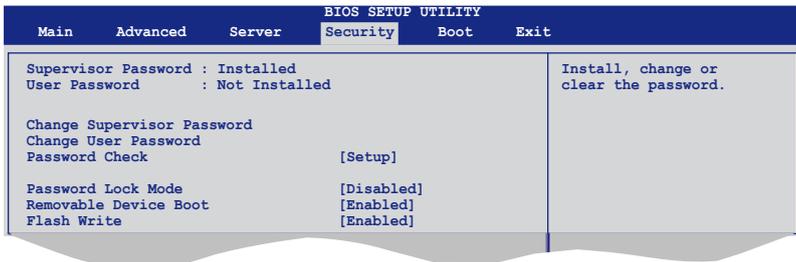

## Change User Password

Select this item to set or change the user password. The **User Password** item on top of the screen shows the default **Not Installed**. After you set a password, this item shows Installed.

To set a User Password:

1.  Select the **Change User Password** item and press <Enter>.
2.  On the password box that appears, type a password composed of at least six letters and/or numbers, then press <Enter>.
3.  Confirm the password when prompted.

The message "Password Installed" appears after you set your password successfully.

To change the user password, follow the same steps as in setting a user password.

## Password Check [Setup]

When set to [Setup], BIOS checks for user password when accessing the Setup utility. When set to [Always], BIOS checks for user password both when accessing Setup and booting the system. Configuration options: [Setup] [Always]

## Password Lock Mode [Disabled]

When set to [Enabled], the keyboard will be locked during the adapter card installation. Configuration options: [Disabled] [Enabled]

## Removable Device Boot [Enabled]

When this item is set to [Disabled], the system cannot boot from the removable devices. Configuration options: [Disabled] [Enabled]

## Flash Write [Disabled]

When this item is set to [Disabled], the BIOS flash memory will be write-protected. Configuration options: [Disabled] [Enabled]

## 4.7    Boot menu

The Boot menu items allow you to change the system boot options. Select an item then press <Enter> to display the sub-menu.

```
                          BIOS SETUP UTILITY
    Main     Advanced    Server    Security    Boot    Exit

  ▶  Boot Device Priority                          Specifies the
                                                   Boot Device
  ▶  Boot Settings Configuration                   Priority sequence.

                                                   ←→   Select Screen
                                                   ↑↓   Select Item
                                                   Enter Go to Sub Screen
                                                   F1   General Help
                                                   F10  Save and Exit
                                                   ESC  Exit

        V02.61 (C)Copyright 1985-2006, American Megatrends, Inc.
```

### 4.7.1    Boot Device Priority

```
                          BIOS SETUP UTILITY
                              Boot

    Boot Device Priority                           Specifies the boot
                                                   sequence from the
                                                   available devices.
    1st Boot Device           [Network: IBA GE Slo]
    2nd Boot Device           [Network: IBA GE Slo]   A device enclosed in
                                                   parenthesis has been
                                                   disabled in the
                                                   corresponding type
                                                   menu.

                                                   ←→   Select Screen
                                                   ↑↓   Select Item
                                                   +-   Change Field
                                                   F1   General Help
                                                   F10  Save and Exit
                                                   ESC  Exit

        V02.61 (C)Copyright 1985-2006, American Megatrends, Inc.
```

### 1st ~ xxth Boot Device [XXXXXXX]

These items specify the boot device priority sequence from the available devices. The number of device items that appears on the screen depends on the number of devices installed in the system. Configuration options: [xxxxx Drive] [Disabled]

## 4.7.2    Boot Settings Configuration

```
                            BIOS SETUP UTILITY
                                    Boot

    Boot Settings Configuration                        Allows BIOS to skip
                                                       certain tests while
    Quick Boot                       [Enabled]         booting. This will
    Full Logo Display                [Disabled]        decrease the time
    Bootup Num-Lock                  [On]              needed to boot the
    PS/2 Mouse Support               [Auto]            system.
    Parity Check                     [Disabled]
    POST Errors                      [Disabled]
    Setup Prompt                     [Enabled]
    Interrupt 19 Capture             [Enabled]
                                                       ←→   Select Screen
                                                       ↑↓   Select Item
                                                       +-   Change Field
                                                       F1   General Help
                                                       F10  Save and Exit
                                                       ESC  Exit

          V02.61 (C)Copyright 1985-2006, American Megatrends, Inc.
```

### Quick Boot [Enabled]

Enabling this item allows the BIOS to skip some power on self tests (POST) while
booting to decrease the time needed to boot the system. When set to [Disabled],
BIOS performs all the POST items.
Configuration options: [Disabled] [Enabled]

### Full Logo Display [Disabled]

Allows you to enable or disable the full screen logo display feature.
Configuration options: [Disabled] [Enabled]

Set this item to [Enabled] to use the ASUS MyLogo2™ feature.

### Bootup Num-Lock [On]

Allows you to select the power-on state for the NumLock.
Configuration options: [Off] [On]

### PS/2 Mouse Support [Auto]

Allows you to enable or disable support for PS/2 mouse.
Configuration options: [Disabled] [Enabled] [Auto]

### Parity Check [Disabled]

Allows you to enable or disable the memory or paraity error check.
Configuration options: [Disabled] [Enabled]

### POST Errors [Disabled]

When set to [Enabled], the system waits for the <F1> key to be pressed when error
occurs. Configuration options: [Disabled] [Enabled]

### Setup Prompt [Enabled]

When set to [Enabled], the system displays the message "Press DEL to run Setup"
during POST. Configuration options: [Disabled] [Enabled]

## Interrupt 19 Capture [Enabled]

When set to [Enabled], this function allows the option ROMs to trap Interrupt 19.
Configuration options: [Disabled] [Enabled]

# 4.8    Exit menu

The Exit menu items allow you to load the optimal or failsafe default values for the
BIOS items, and save or discard your changes to the BIOS items.

```
                          BIOS SETUP UTILITY
   Main      Advanced      Server    Security    Boot    Exit

  Save Changes and Exit                         Exit system setup
  Discard Changes and Exit                      after saving the
  Discard Changes                               changes.

  Load Setup Defaults                           F10 key can be used
                                                for this operation.

                                                ←→   Select Screen
                                                ↑↓   Select Item
                                                Enter Go to Sub Screen
                                                F1   General Help
                                                F10  Save and Exit
                                                ESC  Exit

          V02.61 (C)Copyright 1985-2006, American Megatrends, Inc.
```

> Pressing <Esc> does not immediately exit this menu. Select one of the options
> from this menu or <F10> from the legend bar to exit.

### Exit & Save Changes

Once you are finished making your selections, choose this option from the Exit
menu to ensure the values you selected are saved to the CMOS RAM. An onboard
backup battery sustains the CMOS RAM so it stays on even when the PC is turned
off. When you select this option, a confirmation window appears. Select **YES** to
save changes and exit.

> If you attempt to exit the Setup program without saving your changes, the
> program prompts you with a message asking if you want to save your changes
> before exiting. Press <Enter> to save the changes while exiting.

### Exit & Discard Changes

Select this option only if you do not want to save the changes that you  made to
the Setup program. If you made changes to fields other than System Date, System
Time, and Password, the BIOS asks for a confirmation before exiting.

### Discard Changes

This option allows you to discard the selections you made and restore the
previously saved values. After selecting this option, a confirmation appears. Select
**YES** to discard any changes and load the previously saved values.

**Load Setup Defaults**

This option allows you to load the default values for each of the parameters on the Setup menus. When you select this option or if you press <F5>, a confirmation window appears. Select **YES** to load default values. Select **Exit & Save Changes** or make other changes before saving the values to the non-volatile RAM.

This chapter provides instructions for
setting up, creating, and configuring RAID
sets using the available utilities.

# RAID
# configuration

5

# Chapter summary

5

# 5.1 Setting up RAID

The motherboard comes with the following RAID solutions:

**DSEB-DG model**

- LSI Logic Embeded SATA RAID and the Intel Matrix Storage Manager embedded in the Intel 6321ESB Southbridge supports Serial ATA hard disk drives and RAID0, RAID1, and RAID10 configurations. The Intel Matrix Storage Manager also supports RAID5 configuration.
- The Marvell® 88SE6145 is a host bus adapter chip between PCI-Express and Serial ATA (SATA)/Parallel ATA (PATA) devices. It employs the latest Serial ATA (SATA) Phy technology, operating at 1.5 Gb/s or 3.0 Gb/s. The motherboard supports the following RAID configurations: RAID0, RAID1, RAID10 and RAID5.

**DSEB-DG/SAS model**

- Intel Matrix Storage Manager embedded in the Intel 6321ESB Southbridge supports Serial ATA hard disk drives and RAID0, RAID1, RAID10 and RAID5 configurations.
- LSI1068 PCI-X SAS controller supports SAS disk drives and RAID0, RAID1, and RAID1E configuration.

## 5.1.1 RAID definitions

**RAID 0** *(Data striping)* optimizes two identical hard disk drives to read and write data in parallel, interleaved stacks. Two hard disks perform the same work as a single drive but at a sustained data transfer rate, double that of a single disk alone, thus improving data access and storage. Use of two new identical hard disk drives is required for this setup.

**RAID 1** *(Data mirroring)* copies and maintains an identical image of data from one drive to a second drive. If one drive fails, the disk array management software directs all applications to the surviving drive as it contains a complete copy of the data in the other drive. This RAID configuration provides data protection and increases fault tolerance to the entire system. Use two new drives or use an existing drive and a new drive for this setup. The new drive must be of the same size or larger than the existing drive.

**RAID 1-E** *(Enhanced RAID 1)* has a striped layout with each stripe unit having a secondary (or alternate) copy stored on a different disk. You can use three or more hard disk drives for this configuration.

**RAID 10** is data striping and data mirroring combined without parity (redundancy data) having to be calculated and written. With the RAID 10 configuration you get all the benefits of both RAID 0 and RAID 1 configurations. Use four new hard disk drives or use an existing drive and three new drives for this setup.

**RAID 5** stripes both data and parity information across three or more hard disk drives. Among the advantages of RAID 5 configuration include better HDD performance, fault tolerance, and higher storage capacity. The RAID 5 configuration is best suited for transaction processing, relational database applications, enterprise resource planning,  and other business systems. Use a minimum of three identical hard disk drives for this setup.

> If you want to boot the system from a hard disk drive included in a created RAID set, copy first the RAID driver from the support CD to a floppy disk before you install an operating system to the selected hard disk drive.

## 5.1.2    Installing hard disk drives

The motherboard supports Serial ATA for RAID set configuration. For optimal performance, install identical drives of the same model and capacity when creating a disk array.

To install the SATA hard disks for RAID configuration:

1.    Install the SATA hard disks into the drive bays following the instructions in the system user guide.
2.    Connect a SATA signal cable to the signal connector at the back of each drive and to the SATA connector on the motherboard.
3.    Connect a SATA power cable to the power connector on each drive.

## 5.1.3    Setting the RAID item in BIOS

You must set the RAID item in the BIOS Setup before you can create a RAID set from SATA hard disk drives attached to the SATA connectors supported by the Intel® 6321ESB Southbridge chip. To do this:

1.    Enter the BIOS Setup during POST.
2.    Go to the **Main Menu** > **IDE Configuration** > **S-ATA Configuration**, then press <Enter>.
3.    Set the **SATA Controller Mode Option** item to [Enhanced], then press <Enter>.
4.    Set the **SATA RAID Enable** item to [Enabled].
5.    Save your changes, then exit the BIOS Setup.

Refer to Chapter 4 for details on entering and navigating through the BIOS Setup.

## 5.1.4    RAID configuration utilities

Depending on the RAID connectors that you use, you can create a RAID set using the utilities embedded in each RAID controller. For example, use the **LSI Logic Embedded SATA RAID Setup Utility** or the **Intel® Matrix Storage Manager** if you installed Serial ATA hard disk drives on the Serial ATA connectors supported by the Intel® 6321ESB Southbridge.

For DSEB-DG/SAS model, you may use the **LSI1068 SAS Configuration Utility** if you installed SAS hard disk drives to the mini-SAS connector(s) supported by the LSI1068 PCI-X SAS controller.

Refer to the succeeding sections for details on how to use each RAID configuration utility.

# 5.2 LSI Logic Embedded SATA RAID Setup Utility

The LSI Logic Embedded SATA RAID Setup Utility allows you to create RAID 0, RAID 1, or RAID 10  set(s) from SATA hard disk drives connected to the SATA connectors supported by the motherboard Southbridge chip.

To enter the LSI Logic Embedded SATA RAID Setup Utility:

1.  Turn on the system after installing all the SATA hard disk drives.

2.  During POST, the LSI Logic Embedded SATA RAID Setup Utility automatically detects the installed SATA hard disk drives and displays any existing RAID set(s). Press <Ctrl> + <M> to enter the utility.

---

- The LSI Logic Embedded SATA RAID auto configures to RAID 1 when the SATA to RAID Mode is enabled.

- The RAID setup screens shown in this section are for reference only and may not exactly match the items on your screen due to the controller version difference.

---

3.  The utility main window appears. Use the arrow keys to select an option from the Management Menu, then press <Enter>. Refer to the Management Menu descriptions on the next page.

    At the bottom of the screen is the legend box. The keys on the legend box allow you to navigate through the setup menu options or execute commands. The keys on the legend box vary according to the menu level.

| Menu | Description |
|------|-------------|
| **Configure** | Allows you to create RAID 0 or RAID 1 set using the Easy Configuration or the New Configuration command. This menu also allows you to view, add, or clear RAID configurations or select the boot drive |
| **Initialize** | Allows you to initialize the logical drives of a created RAID set |
| **Objects** | Allows you to initialize logical drives or change the logical drive parameters |
| **Rebuild** | Allows you to rebuild failed drives |
| **Check Consistency** | Allows you to check the data consistency of the logical drives of a created RAID set |

## 5.2.1    Creating a RAID 0 or RAID 1 set

The LSI Logic Embedded SATA RAID Setup Utility allows you to create a RAID 0 or RAID 1 set using two types of configurations: **Easy** and **New**.

In Easy Configuration, the logical drive parameters are set automatically including the size and stripe size (RAID 1 only).

In New Configuration, you manually set the logical drive parameters and assign the set size and stripe size (RAID 1 only).

### Using Easy Configuration

To create a RAID set using the Easy Configuration option:

1. From the utility main menu, highlight **Configure**, then press <Enter>.
2. Use the arrow keys to select **Easy Configuration**, then press <Enter>.

3.  The **ARRAY SELECTION MENU** displays the available drives connected to the SATA ports. Select the drives you want to include in the RAID set, then press <SpaceBar>. When selected, the drive indicator changes from **READY** to **ONLIN A[X]-[Y]**, where X is the array number, and Y is the drive number.

> The information of the selected hard disk drive displays at the bottom of the screen.

4.  Select all the drives required for the RAID set, then press <Enter>. The configurable array appears on screen.

5. Press <F10>, select the configurable array, then press <SpaceBar>.

Press <F10> again, the logical drive information appears including a **Logical Drive** menu that allows you to change the logical drive parameters.

6. Select **RAID** from the **Logical Drive** menu, then press <Enter>.
7. Select the **RAID** level from the menu, then press <Enter>.

You need at least two identical hard disk drives when creating a RAID 1 set.

8. When creating a RAID 1 set, select **DWC** from the **Logical Drive** menu, then press <Enter>.

When creating a RAID 0 set, proceed to step 10.

9. Select **On** to enable the **Disk Write Cache** setting, then press <Enter>.

Enabling DWC can improve the performance, but with the risk of data loss.

10. When finished setting the selected logical drive configuration, select **Accept** from the menu, then press <Enter>.

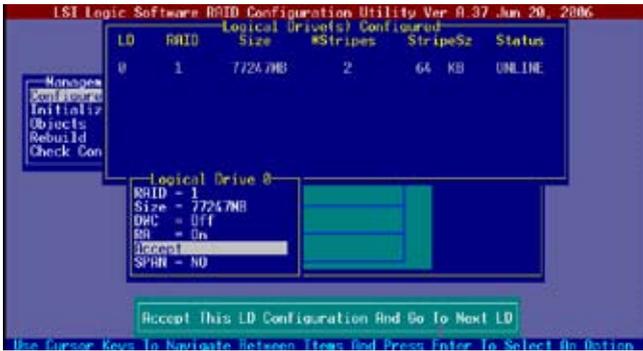

11. When finished setting the selected logical drive configuration, select **Accept** from the menu, then press <Enter>.
12. Follow steps 5 to 10 to configure additional logical drives.
13. When prompted, save the configuration, then press <Esc> to return to the **Management Menu**.

## Using New Configuration

When a RAID set is already existing, using the **New Configuration** command erases the existing RAID configuration data. If you do not want to delete the existing RAID set, use the **View/Add Configuration** command to view or create another RAID configuration.

To create a RAID set using the New Configuration option:

1.  From the utility main menu, highlight **Configure**, then press <Enter>.
2.  Use the arrow keys to select **New Configuration**, then press <Enter>.

3.  Follow steps 3 to 7 of the previous section.
4.  Select **Size** from the **Logical Drive** menu, then press <Enter>.
5.  Key-in the desired logical drive size, then press <Enter>.

6.  Follow steps 8 to 13 of the previous section to create the RAID set.

## 5.2.2    Creating a RAID 10 set

You can create a RAID 10 set using four identical hard disk drives.

To create a RAID 10 set using the Easy Configuration option:

1.    From the utility main menu, highlight **Configure**, then press <Enter>.
2.    Use the arrow keys to select **Easy Configuration**, then press <Enter>.

3.    The **ARRAY SELECTION MENU** displays the available drives connected to the SATA ports. Select the drive(s) you want to include in the RAID set, then press <SpaceBar>. When selected, the drive indicator changes from **READY** to **ONLIN A[X]-[Y**], where X is the array number, and Y is the drive number.

The information of the selected hard disk drive displays at the bottom of the screen.

4. Select all the drives required for the RAID 10 set, then press <Enter>. The configurable array appears on screen.

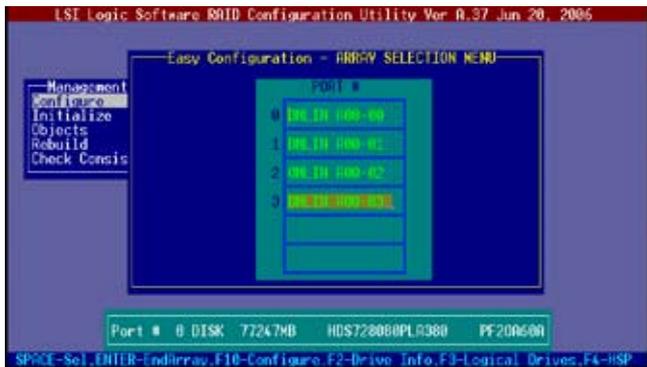

5. Press <F10>, select the configurable array, then press <SpaceBar>.

Press <F10> again, the logical drive information appears including a **Logical Drive** menu that allows you to change the logical drive parameters.

6.    Select **RAID** from the **Logical Drive** menu, then press <Enter>.

7.    Select **RAID 10** from the menu, then press <Enter>.

You need at least four identical hard disk drives when creating a RAID 10 set.

8.    Select **DWC** from the **Logical Drive** menu, then press <Enter>.

9.    Select **On** to enable the **Disk Write Cache** setting, then press <Enter>.

10. When finished setting the selected logical drive configuration, select **Accept** from the menu, then press <Enter>.

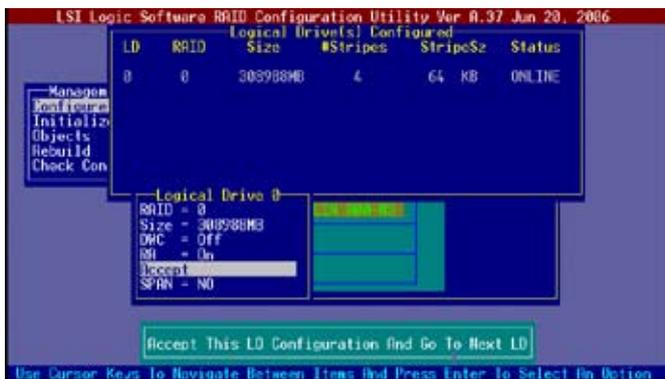

11. When prompted, save the configuration, then press <Esc> to return to the **Management Menu**.

### 5.2.3    Adding or viewing a RAID configuration

You can add a new RAID configuration or view an existing configuration using the **View/Add Configuration** command.

#### Adding a new RAID configuration

To add a new RAID configuration:

1.    From the **Management Menu**, highlight **Configure**, then press <Enter>.
2.    Use the arrow keys to select **View/Add Configuration**, then press <Enter>.

3.    The **ARRAY SELECTION MENU** displays the available drives connected to the SATA ports. Select the drive(s) you want to include in the RAID set, then press <SpaceBar>. When selected, the drive indicator changes from **READY** to **ONLIN A[X]-[Y]**, where X is the array number, and Y is the drive number.

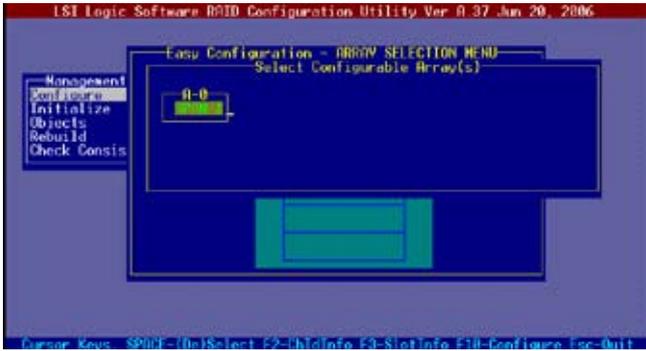

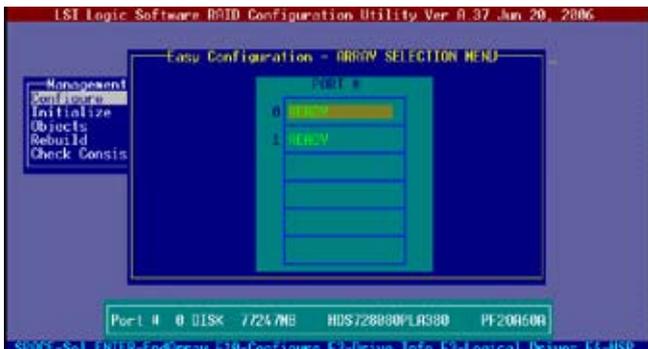

The information of the selected hard disk drive displays at the bottom of the screen.
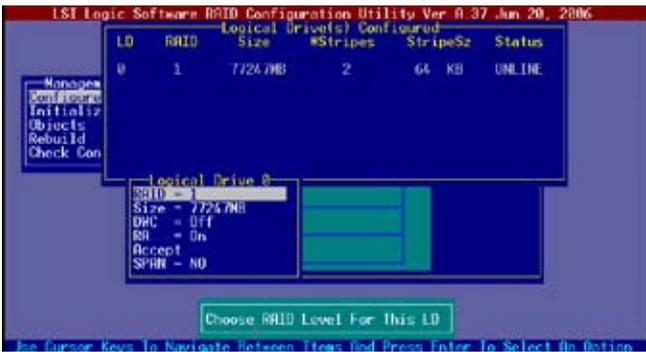

4.  Select all the drives required for the RAID set, then press <Enter>. The configurable array appears on screen.

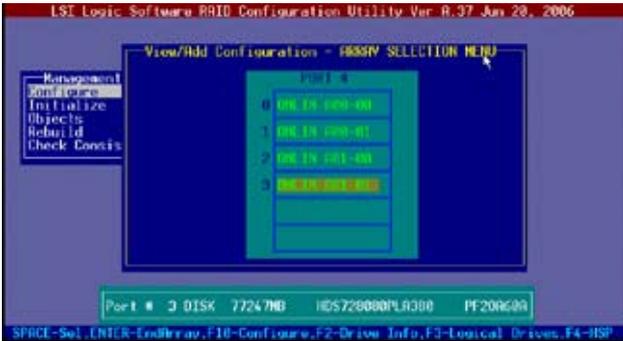

5.  Press <F10>, select the configurable array, then press <SpaceBar>.

6.  Press <F10> again, and select **RAID** from the **Logical Drive** menu, then press <Enter>.

7.  Select the RAID level from the menu, then press <Enter>.

8. Follow steps 8 to 12 of the **Creating a RAID set: Using Easy Configuration** section.

9. When prompted, save the configuration, then press <Esc> to return to the **Management Menu**.

10. Follow steps 8 to 13 of the **Creating a RAID set: Using Easy Configuration** section to add the new RAID configuration.

## 5.2.4    Initializing the logical drives

After creating the RAID set(s), you must initialize the logical drives. You may initialize the logical drives of a RAID set(s) using the **Initialize** or **Objects** command on the **Management Menu**.

### Using the Initialize command

To initialize the logical drive using the Initialize command:

1.    From the **Management Menu**, highlight **Initialize**, then press <Enter>.

2.    The screen displays the available RAID set(s) and prompts you to select the logical drive to initialize. Use the arrow keys to select the logical drive from the **Logical Drive** selection, then press <Enter>.

3.  When prompted, press the <SpaceBar> to select **Yes** from the **Initialize?**
    dialog box, then press <Enter>. You may also press <F10> to initialize the
    drive without confirmation.

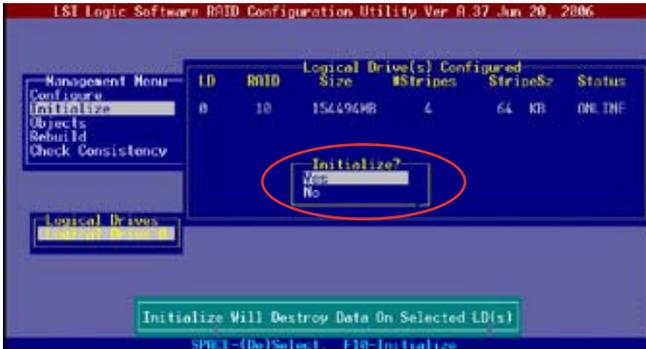

Initializing a logical drive(s) erases all data on the drive.

4.  A progress bar appears on screen. If desired, press <Esc> to abort
    initialization.

5. When initialization is completed, press <Esc>.

## Using the Objects command

To initialize the logical drives using the **Objects** command:

1. From the **Management Menu**, highlight **Objects**, then press <Enter>.

2. Select **Logical Drive** from the **Objects** sub-menu, then press <Enter>.

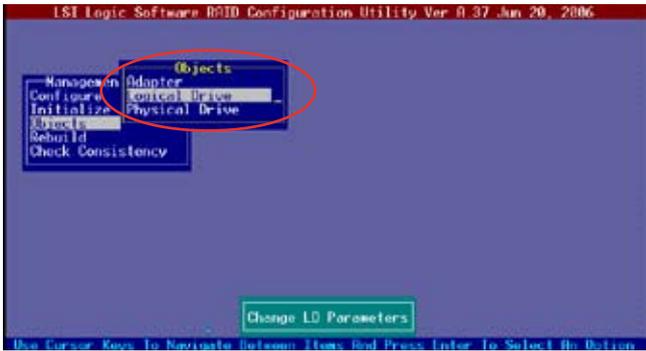

3. Select the logical drive to initialize from the **Logical Drives** sub-menu, then press <Enter>.

4. Select **Initialize** from the pop-up menu, then press <Enter> to start initialization.
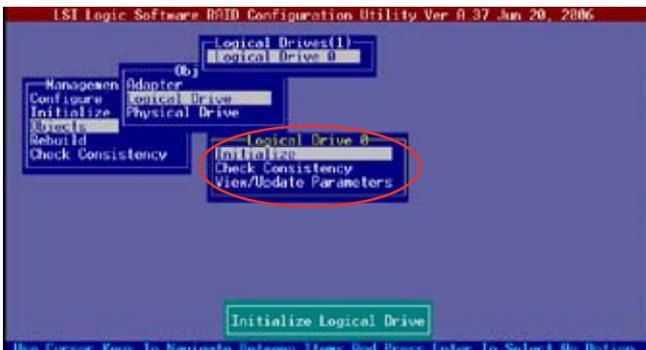

5.	When prompted, press the <SpaceBar> to select **Yes** from the **Initialize?** dialog box, then press <Enter>.

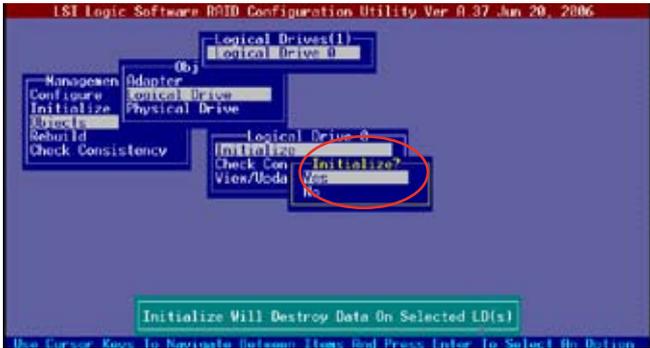

6.	A progress bar appears on screen. If desired, press <Esc> to abort initialization.

7.	When initialization is completed, press <Esc>.

## 5.2.5 Rebuilding failed drives

You can manually rebuild failed hard disk drives using the **Rebuild** command in the Management Menu.

To rebuild a failed hard disk drive:

1. From the **Management Menu**, highlight **Rebuild**, then press <Enter>.

2. The **PHYSICAL DRIVES SELECTION MENU** displays the available drives connected to the SATA ports. Select the drive you want to rebuild, then press <SpaceBar>.

3. After selecting the drive to rebuild, press <F10>. The indicator for the selected drive now shows **RBLD**.

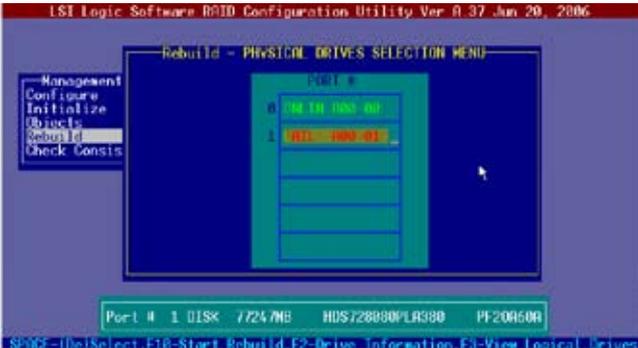

4. When prompted, press <Y> to to rebuild the drive.

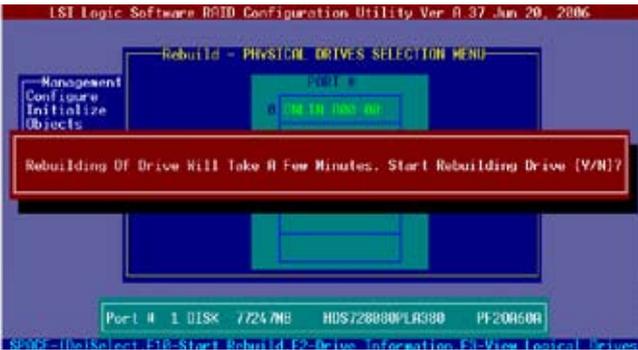

5. When rebuild is complete, press any key to continue.

## 5.2.6 Checking the drives for data consistency

You can check and verify the accuracy of data redundancy in the selected logical drive. The utility can automatically detect and/or detect and correct any differences in data redundancy depending on the selected option in the **Objects** > **Adapter** menu.

The **Check Consistency** command is available only for logical drives included in a RAID 1 set.

### Using the Check Consistency

To check data consistency using the **Check Consistency** command:

1.  From the **Management Menu**, select **Check Consistency**, then press <Enter>.

2.  The screen displays the available RAID set(s) and prompts you to select the logical drive to check. Press the <Spacebar> to select the logical drive from the **Logical Drive** selection, then press <F10>.

3. When prompted, use the arrow keys to select **Yes** from the **Consistency Check** dialog box, then press <Enter>. You may also press <F10> to check the drive consistency.

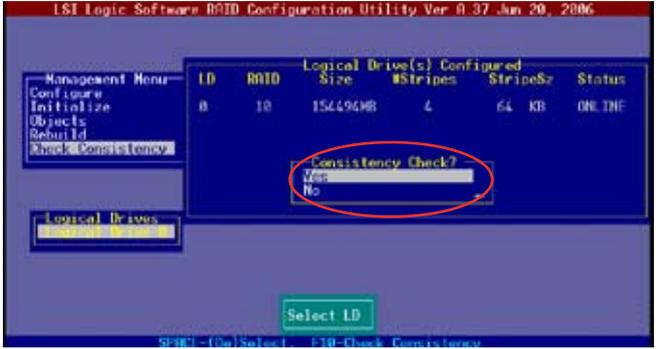

A progress bar appears on screen.

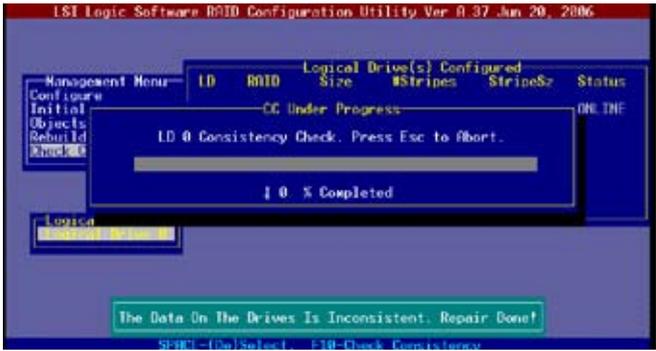

4. While checking the disk consistency, press <Esc> to display the following options.

   • **Stop** - Stops the consistency check. The utility stores the percentage of disk checked, When you restart checking, it continues from the last percentage completed rather than from zero percent.

   • **Continue** - Continues the consistency check.

   • **Abort** - Aborts the consistency check. When you restart checking, it continues from zero percent.

5. When checking is complete, press any key to continue.

**Using the Objects command**

To check data consistency using the **Objects** command:

1. From the **Management Menu**, select **Objects**, then select **Logical Drive** from the menu.
2. Use the arrow keys to select the logical drive you want to check, then press <Enter>.
3. Select **Check Consistency** from the pop-up menu, then press <Enter>.
4. When prompted, use the arrow keys to select **Yes** from the dialog box to check the drive.
5. When checking is complete, press any key to continue.

## 5.2.7 Deleting a RAID configuration

To delete a RAID configuration:

1.  From the **Management Menu**, select **Configure** > **Clear Configuration**, then press <Enter>.

2.  When prompted, use the arrow keys to select **Yes** from the **Clear Configuration?** dialog box, then press <Enter>.

    The utility clears the current array.
3.  Press any key to continue.

### 5.2.8    Selecting the boot drive from a RAID set

You must have created a new RAID configuration before you can select the boot drive from a RAID set. Refer to the **Creating a RAID set: Using New Configuration** section for details.

To select the boot drive from a RAID set:

1.    From the **Management Menu**, select **Configure** > **Select Boot Drive**, then press <Enter>.

2.    When prompted, use the arrow keys to select the bootable logical drive from the list, then press <Enter>.

3.    The logical drive is selected as boot drive. Press any key to continue.

### 5.2.9    Enabling the WriteCache

You may enable the RAID controller's WriteCache option to improve the data transmission performance.

> ⚠️ When you enable **WriteCache**, you may lose data when a power interruption occurs while transmitting or exchanging data among the drives.

To enable WriteCache:

1.    From the **Management Menu**, select **Objects** > **Adapter**, then press <Enter> to display the adapter properties.

2.    Select **WriteCache**, then press <Enter> to turn the option **On** (enabled).

3.    When finished, press any key to continue.

# 5.3 Intel® Matrix Storage Manager Option ROM Utility

The Intel® Matrix Storage Manager Option ROM utility allows you to create RAID 0, RAID 1, RAID 0+1, and RAID 5 set(s) from Serial ATA hard disk drives.

To enter the Intel® Matrix Storage Manager Option ROM Utility:

1.  Turn on the system after installing all Serial ATA hard disk drives.
2.  During POST, press <Ctrl+I> to display the utility main menu.

```
    Intel(R) Matrix Storage Manager Option ROM v5.6.2.1002 ESB2 wRAID5
       Copyright(C) 2003-05 Intel Corporation. All Rights Reserved.
   ═════════════════════════[ MAIN MENU ]═════════════════════════
                      1. Create RAID Volume
                      2. Delete RAID Volume
                      3. Reset Disks to Non-RAID
                      4. Exit

   ══════════════════[ DISK/VOLUME INFORMATION ]══════════════════
    RAID Volumes:
    None defined.

    Physical Disks:
    Port   Drive Model      Serial #     Size    Type/Status(Vol ID)
    0      XXXXXXXXXXX      XXXXXXXX     XX.XXGB   Non-RAID Disk
    1      XXXXXXXXXXX      XXXXXXXX     XX.XXGB   Non-RAID Disk
    2      XXXXXXXXXXX      XXXXXXXX     XX.XXGB   Non-RAID Disk
    3      XXXXXXXXXXX      XXXXXXXX     XX.XXGB   Non-RAID Disk

        [↑↓]-Select    [ESC]-Exit           [ENTER]-Select Menu
```

The navigation keys at the bottom of the screen allow you to move through the menus and select the menu options.

The RAID setup screens shown in this section are for reference only and may not exactly match the items on your screen due to the controller version difference.

The utility supports maxium four hard disk drives for RAID configurration.

## 5.3.1    Creating a RAID 0 set (Stripe)

To create a RAID 0 set:

1.    From the utility main menu, select **1. Create RAID Volume**, then press
      <Enter>. This screen appears.

```
    Intel(R) Matrix Storage Manager Option ROM v5.6.2.1002 ESB2 wRAID5
      Copyright(C) 2003-05 Intel Corporation. All Rights Reserved.
    ══════════════════════[ CREATE ARRAY MENU ]═══════════════════════

                         Name:  Volume0
                   RAID Level:  RAID0(Stripe)
                        Disks:  Select Disks
                   Strip Size:  128KB
                     Capacity:  0.0    GB

                              Create Volume

    ════════════════════[ DISK/VOLUME INFORMATION ]═══════════════════

        Enter a string between 1 and 16 characters in length that can be used
       to uniquely identify the RAID volume. This name is case sensitive
                        and cannot contain special characters.

         [↑↓]-Select     [ESC]-Exit              [ENTER]-Select Menu
```

2.    Enter a name for the RAID 0 set, then press <Enter>.

3.    Highlight **RAID Level**, press the up/down arrow key to select **RAID 0 (Stripe)**,
      then press <Enter>.

4.    Highlight the **Disks** item, then press <Enter> to select the hard disk drives
      you want to include in the RAID set. The **SELECT DISKS** screen appears.

```
              ═══════════════════[ SELECT DISKS ]════════════════════
              Port  Drive   Model    Serial #   Size     Status
              0     XXXXXX  XXXXXX              XX.XGB   Non-RAID Disk
              1     XXXXXX  XXXXXX              XX.XGB   Non-RAID Disk
              2     XXXXXX  XXXXXX              XX.XGB   Non-RAID Disk
              3     XXXXXX  XXXXXX              XX.XGB   Non-RAID Disk

              Select 2 to 4 disks to use in creating the volume.
              └[↑↓]-Previous/Next  [SPACE]-Selects  [ENTER]-Selection Complete ┘
```
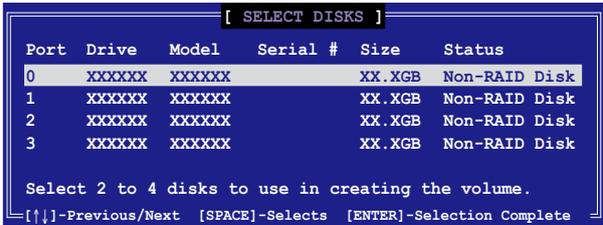

5.    Use the up/down arrow key to highlight a drive, then press <Spacebar>
      to select. A small triangle marks the selected drive. Press <Enter> after
      completing your selection.

6.  Use the up/down arrow key to select the stripe size for the RAID 0 array, then press <Enter>. The available stripe size values range from 4 KB to 128 KB. The default stripe size is 128 KB.

A lower stripe size is recommended for server systems. A higher stripe size is recommended for multimedia computer systems used mainly for audio and video editing.

7.  Highlight the **Capacity** item, enter the desired RAID volume capacity, then press <Enter>. The default value indicates the maximum allowed capacity.

8.  When the **Create Volume** item is highlighted, press <Enter>. A warning message appears.

```
WARNING: ALL DATA ON SELECTED DISKS WILL BE LOST.
Are you sure you want to create this volume? (Y/N):
```

9.  Press <Y> to create the RAID volume and return to the main menu, or <N> to go back to the **Create Array** menu.

## 5.3.2 Creating a RAID 1 set (Mirror)

To create a RAID 1 set:

1.  From the utility main menu, select **1. Create RAID Volume**, then press <Enter>. This screen appears.

```
       Intel(R) Matrix Storage Manager Option ROM v5.6.2.1002 ESB2 wRAID5
         Copyright(C) 2003-05 Intel Corporation. All Rights Reserved.
       ═══════════════════[ CREATE ARRAY MENU ]═══════════════════

                          Name:  Volume1
                    RAID Level:  RAID1(Mirror)
                         Disks:  Select Disks
                    Strip Size:  N/A
                      Capacity:  0.0   GB

                            Create Volume

       ═══════════════════[ DISK/VOLUME INFORMATION ]═══════════════════

          Enter a string between 1 and 16 characters in length that can be used
        to uniquely identify the RAID volume. This name is case sensitive
                     and cannot contain special characters.

          [↑↓]-Select    [ESC]-Exit            [ENTER]-Select Menu
```

2.  Enter a name for the RAID 1 set, then press <Enter>.
3.  Highlight **RAID Level**, press the up/down arrow key to select **RAID 1 (Mirror)**, then press <Enter>.
4.  Follow steps 4 to 5 and 7 to 9 of the previous section to create the RAID 1 set.

## 5.3.3    Creating a RAID 10 set (Stripe + Mirror)

To create a RAID 10 set:

1.  From the utility main menu, select **1. Create RAID Volume**, then press <Enter>. This screen appears.

```
    Intel(R) Matrix Storage Manager Option ROM v5.6.2.1002 ESB2 wRAID5
      Copyright(C) 2003-05 Intel Corporation. All Rights Reserved.
    ══════════════════════[ CREATE ARRAY MENU ]══════════════════════

                      Name:  Volume1
                RAID Level:  RAID10(RAID0+1)
                     Disks:  Select Disks
                Strip Size:  128KB
                  Capacity:  0.0   GB

                           Create Volume

    ═════════════════════[ DISK/VOLUME INFORMATION ]═════════════════

       Enter a string between 1 and 16 characters in length that can be used
      to uniquely identify the RAID volume. This name is case sensitive
                   and cannot contain special characters.

         [↑↓]-Select    [ESC]-Exit           [ENTER]-Select Menu
```
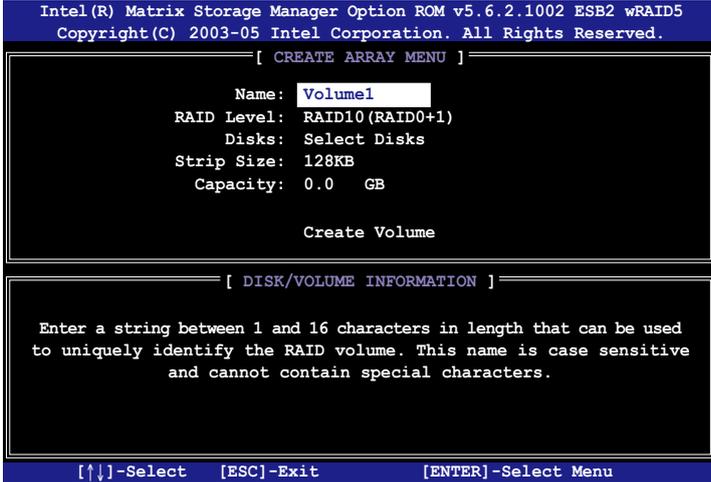

2.  Enter a name for the RAID 10  set, then press <Enter>.
3.  Highlight **RAID Level**, press the up/down arrow key to select **RAID 10 (RAID0+1)**, then press <Enter>.
4.  Follow steps 4 to 9 of section **5.3.1 Creating a RAID 0 set (striped)** to create the RAID 10 set.

## 5.3.4    Creating a RAID 5 set (Parity)

To create a RAID 5 set:

1.  From the utility main menu, select **1. Create RAID Volume**, then press
    <Enter>. This screen appears.
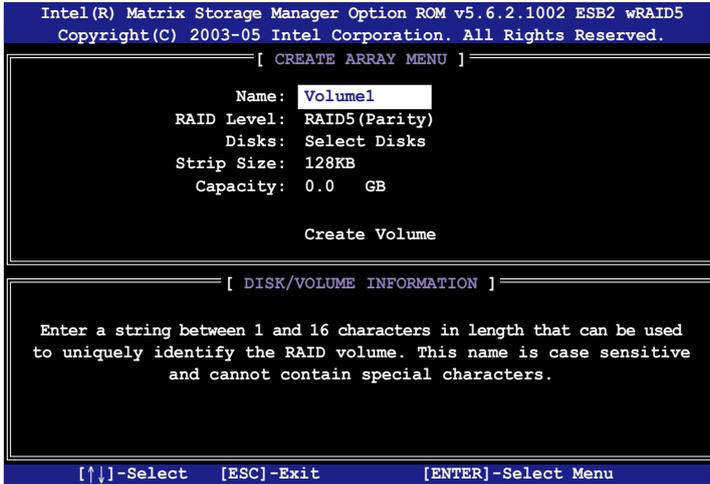

```
    Intel(R) Matrix Storage Manager Option ROM v5.6.2.1002 ESB2 wRAID5
       Copyright(C) 2003-05 Intel Corporation. All Rights Reserved.
    ═══════════════════════[ CREATE ARRAY MENU ]═══════════════════════

                         Name:  Volume1
                   RAID Level:  RAID5(Parity)
                        Disks:  Select Disks
                   Strip Size:  128KB
                     Capacity:  0.0   GB

                              Create Volume

    ═════════════════════[ DISK/VOLUME INFORMATION ]═════════════════════

       Enter a string between 1 and 16 characters in length that can be used
      to uniquely identify the RAID volume. This name is case sensitive
                      and cannot contain special characters.

        [↑↓]-Select    [ESC]-Exit           [ENTER]-Select Menu
```

2.  Enter a name for the RAID 10 set, then press <Enter>.
3.  Highlight **RAID Level**, press the up/down arrow key to select **RAID5**, then
    press <Enter>.
4.  Follow steps 4 to 9 of section **5.3.1 Creating a RAID 0 set (striped)** to create
    the RAID 5 set.

### 5.3.5 Deleting a RAID set

> ⚠ Take caution when deleting a RAID set. You will lose all data on the hard disk drives when you delete a RAID set.

To delete a RAID set:

1.  From the utility main menu, select **2. Delete RAID Volume**, then press <Enter> to display this screen.

```
    Intel(R) Matrix Storage Manager Option ROM v5.6.2.1002 ESB2 wRAID5
        Copyright(C) 2003-05 Intel Corporation. All Rights Reserved.
    ════════════════════════[ DELETE VOLUME MENU ]════════════════════════
    Name        Level        Drives    Capacity  Status    Bootable
    Volume0     RAIDX(xxxxx)   X        XXX.XGB   Normal    Yes

    ══════════════════════════════[ HELP ]══════════════════════════════

      Deleting a volume will destroy the volume data on the drive(s) and
        cause any member disks to become available as non-RAID disks.

      WARNING: EXISTING DATA WITHIN THIS VOLUME WILL BE LOST AND
                        NON-RECOVERABLE.

    [↑↓]-Select      [<ESC>]-Previous Menu       [<Del>]-Delete Volume
```

2.  Use the up/down arrow key to select the RAID set you want to delete, then press <Del>. This window appears.

```
                        [ DELETE VOLUME VERIFICATION ]

                    ALL DATA IN THE VOLUME WILL BE LOST!
        Are you sure you want to delete volume "VolumeX"? (Y/N):
```

3.  Press <Y> to delete the RAID set and return to the utility main menu; otherwise, press <N> to return to the **Delete Volume** menu.

## 5.3.6    Resetting disks to Non-RAID

⚠️    Take caution before you reset a RAID volume hard disk drive to non-RAID. Resetting a RAID volume hard disk drive deletes all internal RAID structure on the drive.

To reset a RAID set hard disk drive:

1.    From the utility main menu, select **3. Reset Disks to Non-RAID**, then press <Enter> to display this screen.

```
[ RESET RAID DATA ]

Resetting RAID data will remove internal RAID structures
from the selected RAID disks. By removing these structures,
the drive will revert back to a non-RAID disk.

WARNING: Resetting a disk causes all data on the disk to
be lost.

Port  Drive Model     Serial #        Size    Status
0     XXXXXXXXXXXX    XXXXXXXX        XX.XGB  Member Disk
1     XXXXXXXXXXXX    XXXXXXXX        XX.XGB  Member Disk
            Select the disks that should be reset.

   [↑↓]-Previous/Next  [SPACE]-Selects  [ENTER]-Selection Complete
```

2.    Use the up/down arrow key to highlight the RAID set drive you want to reset, then press <Spacebar> to select.

3.    Press <Enter> to reset the RAID set drive. A confirmation message appears.

4.    Press <Y> to reset the drive or press <N> to return to the utility main menu.

5.    Follow steps 2 to 4 to select and reset other RAID set drives.

## 5.3.7    Exiting the Intel® Matrix Storage Manager

To exit the utility:

1.    From the utility main menu, select **4. Exit**, then press <Enter>. This window appears.

```
[ CONFIRM EXIT ]

       Are you sure you want to exit? (Y/N):
```

2.    Press <Y> to exit or press <N> to return to the utility main menu.

# 5.4    Global Array Manager

You may also create a RAID set(s) in Windows® operating environment using the Global Array Manager (GAM) application. The GAM application is available from the motherboard support CD.

Refer to the GAM user guide in the motherboard support CD for details.

## 5.5 Marvell® 88SE6145 RAID BIOS configuration utility *(DSEB-DG model only)*

The Marvell® 88SE6145 RAID BIOS Configuration utility allows you to create RAID 0, RAID 1, RAID 10 ,and RAID 5 set(s) from Serial ATA hard disk drives that are connected to the Serial ATA connectors supported by the Southbridge.

To enter the Marvell® RAID BIOS Configuration utility:

1.  Install all the Serial ATA hard disk drives at Red SATA Connector.
2.  Turn on the system.
3.  During POST, press <Ctrl> + <M> to enter the utility main menu.

```
ENTER/SPACE:Select, ESC:Back/Exit

   NEXT

 Marvell BIOS Setup (c) 2006 Marvell Technology, Ltd.
```

3. Press <Y> again to confirm and delete the selected array.

```
Warning: Do you want to delete the array's MBR?[Y]
  [Adapter]    [Create]    [Delete]
  Delete array
   ID  Array Name  Size   Level   Status     Stripe Members
  *0               2TB    RAID0   ONLINE     64KB   0, 4
   NEXT

  Marvell BIOS Setup (c) 2006 Marvell Technology, Ltd.
```

You cannot recover lost data if you delete an array. Make sure you back up important data before deleting an array.

# 5.6    LSI Logic MPT Setup Utility
## *(DSEB-DG/SAS model only)*

The LSI Logic MPT Setup Utility is an integrated RAID solution that allows you to
allows you to create the following RAID set(s) from SAS hard disk drives supported
by the LSI1068 PCI-X SAS controller:

- • RAID 1 (Integrated Mirroring)
- • RAID 1E (Integrated Mirroring Enhanced)
- • RAID 0 (Integrated Striping)

## 5.6.1    Integrated Mirroring

### Overview

The Integrated Mirroring (IM) feature supports simultaneous mirrored volumes with
two disks (IM). Integrated Mirroring Enhanced (IME) supports three to eight disks,
or seven mirrored disks plus a hot spare disk.

The IM feature supports hot swap capability, so when a disk in an IM volume
failes, you can easily restore the volume, and the swapped disk is automatically re-
mirrored.

### Creating Integrated Mirroring volumes

- • You may use disks of different sized in IM and IME volumes; however, the
size of the smallest disk determines the "logical" size of each member disk.

- • DO NOT combine Serial ATA and SAS disk drives in one volume.

- • The RAID setup screens shown in this section are for reference only and
may not exactly match the items on your screen due to the controller
version difference.

To create an IM volume:

1.    Turn on the system after installing all SAS hard disk drives.

2.    During POST, press <Ctrl+C> to enter the SAS configuration utility.

```
LSI Logic Corp. MPT SAS BIOS
MPTBIOS-6.16.00.00 (2007.05.07)
Copyright 2000-2007 LSI Logic Corp.

Adapter(s) disabled by user
Press Ctrl-C to start LSI Logic Configuration Utility...
```

3. The following screen appears. Select a channel and press <Enter> to enter the setup.

```
LSI Logic Config Utility          v6.16.00.00 (2007.05.07)
Adapter List  Global Properties

Adapter    PCI   PCI   PCI   PCI   FW Revision        Status      Boot
           BUS   Dev   Fnc   Slot                                 Order
SAS1068    05    03    00    00    1.15.00.00-IR      Disabled    0

Esc = Exit Menu    F1/Shift+1 = Help
Alt+N = Global Properties   -/+ = Alter Boot Order   Ins/Del = Alter Boot List
```

The numbers of the channel depend on the controller.

4. The **Adapter Properties** screen appears.
   Use the arrow keys to select **RAID Properties**, then press <Enter>.

Select New Array Type -- SAS1068

       Create IM Volume          Create Integrated Mirror Array of 2
                                 disks plus an optional hot spare. Data
                                 on the primary disk may be migrated.

       Create IME Volume         Create Integrated Mirrored Enhanced
                                 Array of 3 to 8 disks including an
                                 optional hot spare.
                                 ALL DATA on array disks will be DELETED!

       Create IS Volume          Create Integrated Striping array of
                                 2 to 8 disks.
                                 ALL DATA on array disks will be DELETED!

Esc = Exit Menu       F1/Shift+1 = Help
Enter = Choose array type to create
```

6. The Create New Array screen shows the disks you can add to make up the IM volume. Use the arrow key to select a disk, then move the cursor to the RAID Disk column. To include this disk in the array, press <+>, <->, or <Space>.

You may also specify the Hot Spare disk here. Select the disk, then move the cursor to the Hot Spr column, then press <+>, <->, or <Space>.

```
LSI Logic Config Utility          v6.16.00.00 (2007.05.07)
Create New Array -- SAS1068

   Array Type:                    IM
   Array Size(MB):                ------

Slot   Device Identifier          RAID   Hot   Drive     Pred   Size
Num                               Disk   Spr   Status    Fail   (MB)
   0   SEAGATE ST373454SS  0003   [NO]   [NO]  -------   ----    70007
   1   SEAGATE ST373454SS  0003   [NO]   [NO]  -------   ----    70007
   2   SEAGATE ST373454SS  0003   [NO]   [NO]  -------   ----    35003
   3   SEAGATE ST373454SS  0003   [NO]   [NO]  -------   ----    35003

Esc = Exit Menu   F1/Shift+1 = Help
SPACE/+/- = Select disk for array or hot spare   C = Create array
```

By default, the RAID Disk field shows No before array creation. This field is grayed out under the following conditions:

- The disk does not meet the minimum requirements for use in a RAID array.

- The disk is not large enough to mirror existing data on the primary drive.

- The disk has been selected as the Hot Spare for the RAID array.

- The disk is already part of another array.

7.    A confirmation screen appears.

Press <M> to keep existing data on the first disk. If you choose this option, data on the first disk will be mirrored on the second disk that you will add to the volume later. Make sure the data you want to mirror is on the first disk.

Press <D> to overwrite any data and create the new IM array.
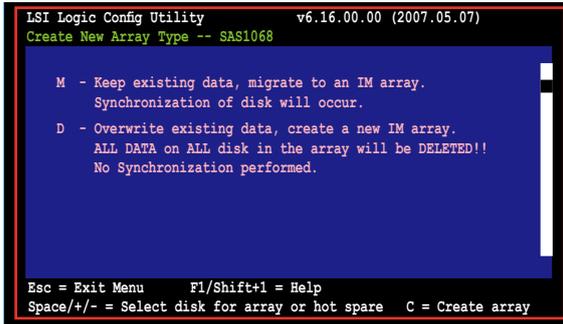

```
LSI Logic Config Utility              v6.16.00.00 (2007.05.07)
Create New Array Type -- SAS1068

    M  - Keep existing data, migrate to an IM array.
         Synchronization of disk will occur.

    D  - Overwrite existing data, create a new IM array.
         ALL DATA on ALL disk in the array will be DELETED!!
         No Synchronization performed.

Esc = Exit Menu       F1/Shift+1 = Help
Space/+/- = Select disk for array or hot spare   C = Create array
```
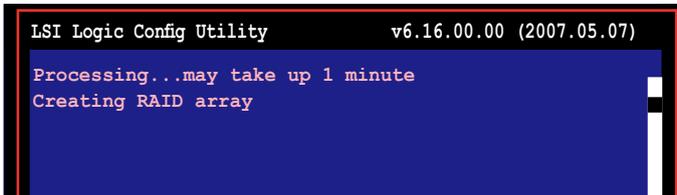

8.    Repeat steps 5 and 6 to add the second disk to the volume.

9.    When done, press <C> to create the array, then select Save changes then exit this menu.
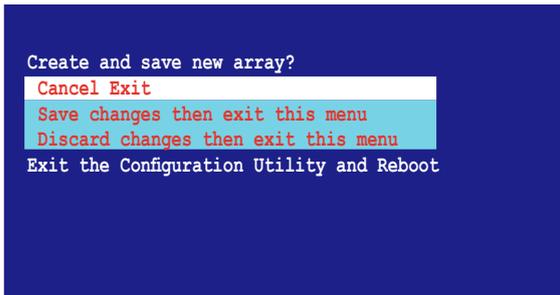

```
Create and save new array?
Cancel Exit
Save changes then exit this menu
Discard changes then exit this menu
Exit the Configuration Utility and Reboot
```

10.   The utility creates the array.

   1      SEAGATE ST373454SS   0003  [NO]   [NO]   -------  ----    70007
   2      SEAGATE ST373454SS   0003  [Yes]  [NO]   -------  ----    35003
   3      SEAGATE ST373454SS   0003  [Yes]  [NO]   -------  ----    35003

 Esc = Exit Menu    F1/Shift+1 = Help
 SPACE/+/- = Select disk for array or hot spare   C = Create array
```

By default, the RAID Disk field shows No before array creation. This field is grayed out under the following conditions:

·   The disk does not meet the  minimum requirements for use in a RAID array.

·   The disk is not large enough to mirror existing data on the primary drive.

·   The disk has been selected as the Hot Spare for the RAID array.

·   The disk is already part of another array.

4.  Repeat step 5 to add the other disks to the volume.

5.  When done, press <C> to create the array, then select Save changes then exit this menu.

```
  Create and save new array?
  Cancel Exit
  Save changes then exit this menu
  Discard changes then exit this menu
  Exit the Configuration Utility and Reboot
```

6.  The utility creates the array.

```

 Processing...may take up 1 minute
 Creating RAID array
```

### 5.6.3 Integrated Striping (IS) volume

**Overview**

The Integrated Striping (IS) feature provides RAID 0 functionality, supporting volumes with two to eight disks. You may combine an IS volume with an IM or IME volume.

**Creating Integrated Striping volumes**

DO NOT combine Serial ATA and SAS disk drives in one volume.

To create an IS volume:

1.    Turn on the system after installing all SAS hard disk drives.

2.    During POST, press <Ctrl+C> to enter the SAS configuration utility.

```
LSI Logic Corp. MPT SAS BIOS
MPTBIOS-6.16.00.00 (2007.05.07)
Copyright 2000-2007 LSI Logic Corp.

Adapter(s) disabled by user
Press Ctrl-C to start LSI Logic Configuration Utility...
```

3.    The **Adapter Properties** screen appears.
      Use the arrow keys to select **RAID Properties**, then press <Enter>.

```

## 5.6.4 Managing Arrays

The LSI Logic MPT Setup Utility allows you to perform other tasks related to configuring and maintaining IM and IME volumes.

Refer to this section to view volume properties, manage the hot spare disk, synchronize the array, activate the array, and delete the array.
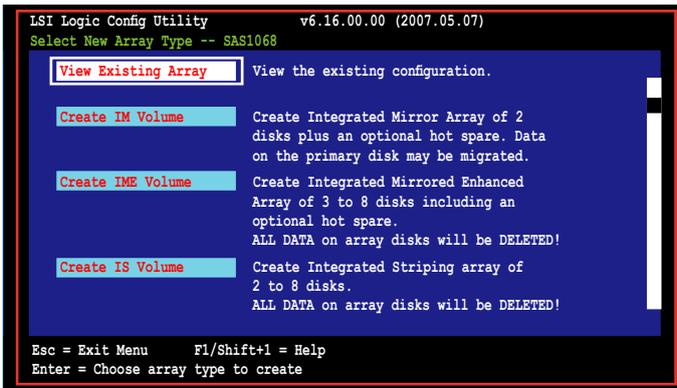

### Viewing volume properties

To view volume properties:

1.   On the main menu, select **RAID Properties**.

```
LSI Logic Config Utility        v6.16.00.00 (2007.05.07)
Adapter Properties -- SAS1068

        Adapter                     SAS1068
        PCI Slot                    00
        PCI Address(Bus/Dev/Func)   05.03.00
        MPT Firmware Revision       1.15.00.00-IR
        SAS Address                 500E0180:60831008
        NVIDIA Version              25.02
        Status                      Disabled
        Boot Order                  0
        Boot Support                (Enabled BIOS & OS)

        RAID Properties

        SAS Topology

        Advanced Adapter Properties

Esc = Exit Menu      F1/Shift+1 = Help
Enter = Select Item  -/+ = Change Item
```

2.   On the next screen that appears, select **View Existing Array**.

```
LSI Logic Config Utility        v6.16.00.00 (2007.05.07)
Select New Array Type -- SAS1068

        View Existing Array     View the existing configuration.

        Create IM Volume        Create Integrated Mirror Array of 2
                                disks plus an optional hot spare. Data
                                on the primary disk may be migrated.

        Create IME Volume       Create Integrated Mirrored Enhanced
                                Array of 3 to 8 disks including an
                                optional hot spare.
                                ALL DATA on array disks will be DELETED!

        Create IS Volume        Create Integrated Striping array of
                                2 to 8 disks.
                                ALL DATA on array disks will be DELETED!

Esc = Exit Menu      F1/Shift+1 = Help
Enter = Choose array type to create
```

3.   The **View Existing Array** screen appears. Here you can view properties of the RAID array(s) created. If you have configured a hot spare, it will also be listed. if you created more than one array, you may view the next array by pressing <Alt+N>.

```
LSI Logic Config Utility                  v6.16.00.00 (2007.05.07)
View Array -- SAS1068
       Array                        1 of 1

Enter=Select Item   Alt+N=Next Array   C = Create an array
```

## Managing hot spares

You may configure one disk as a global hot spare to protect critical data on the IM/IME volume(s). You may create the hot spare disk at the same time you create the IM/IME volume. Refer to this section when adding a hot spare disk on an existing volume.

> If a disk on an IM/IME volume fails, the utility automatically rebuilds the failed disk data on the hot spare. When the failed disk is replaced, the utility assigns the replacement as the new hot spare.

To create a hot spare:

1.   Follow steps 1 ~ 3 of the section **Viewing volume properties**.

2.   From the **View Array** screen, select **Manage Array**, then press <Enter>.

```
LSI Logic Config Utility            v6.16.00.00 (2007.05.07)
View Array -- SAS1068
        Array                    1 of 1
        Identifier               LSILOGICLogical Volume  3000
        Type                     IME

```

## Synchronizing the array

Synchronizing the array allows the utility to resynchronize data on the mirrored disk in the array. This procedure is seldom required because data synchronization is automatically done during normal operation.

To synchronize the array:

1.    Follow steps 1 ~ 3 of the section **Viewing volume properties** and step 2 of the section **Managing hot spares**.

2.    From the **Manage Array** screen select **Synchronize Array**, then press <Enter>.

```
LSI Logic Config Utility              v6.16.00.00 (2007.05.07)
Manage Array -- SAS1068
      Identifier                LSILOGICLogical Volume  3000
      Type                      IME
      Scan Order                0
      Size(MB)                  51498
      Status                    Optimal

      Manage Hot Spare

      Synnchronize Array

      Activate Array

      Delete Array

Esc = Exit Menu          F1/Shift+1 = Help
Enter = Select Item
```

3.    Press <Y> to begin the synchronization, or <N> to cancel.

## Activating an array

If an array is removed from one controller/computer or moved to another, the array is considered inactive. When you add the array back to the system, you may reactivate the array.

To activate the array:

1.  From the **Manage Array** screen, select **Activate Array**, then press <Enter>.

```
LSI Logic Config Utility              v6.16.00.00 (2007.05.07)
Manage Array -- SAS1068
        Identifier                    LSILOGICLogical Volume  3000
        Type                          IME
        Scan Order                    0
        Size(MB)                      51498
        Status                        Optimal

    Manage Hot Spare

    Synnchronize Array

    Activate Array

    Delete Array

Esc = Exit Menu          F1/Shift+1 = Help
Enter = Select Item
```
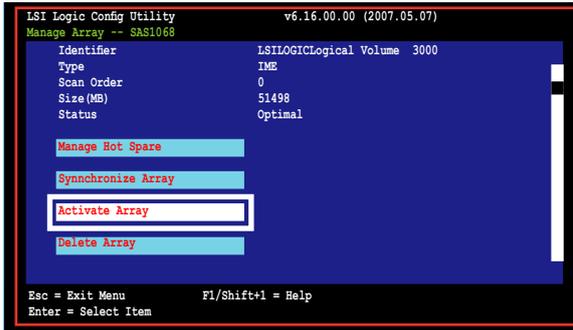

2.  Press <Y> to activate, or <N> to cancel.

## Deleting an array

⚠️
- You cannot recover lost data if you delete an array. Make sure you back up important data before deleting an array.

- If you delete an IM (RAID 1) volume, the data is preserved on the primary disk.

To delete an array:

1.  From the **Manage Array** screen, select **Delete Array**, then press <Enter>.

```
LSI Logic Config Utility              v6.16.00.00 (2007.05.07)
Manage Array -- SAS1068
        Identifier                    LSILOGICLogical Volume  3000
        Type                          IM
        Scan Order                    0
        Size(MB)                      34332
        Status                        Optimal

    Manage Hot Spare

    Synnchronize Array

    Activate Array

    Delete Array

Esc = Exit Menu          F1/Shift+1 = Help
Enter = Select Item
```

2.  Press <Y> to delete, or <N> to cancel.

## 5.6.5    Viewing SAS topology

1.    From the **Adapter Properties** screen, select **SAS Topology**.

```
LSI Logic Config Utility         v6.16.00.00 (2007.05.07)
Adapter Properties -- SAS1068

        Adapter                    SAS1068
        PCI Slot                   00
        PCI Address(Bus/Dev/Func)  05.03.00
        MPT Firmware Revision      1.15.00.00-IR
        SAS Address                500E0180:60831008
        NVIDIA Version             25.02
        Status                     Disabled
        Boot Order                 0
        Boot Support               (Enabled BIOS & OS)

        RAID Properties
        SAS Topology
        Advanced Adapter Properties

Esc = Exit Menu      F1/Shift+1 = Help
Enter = Select Item  -/+ = Change Item
```

Press <Alt+D> to display device properties, or <Alt+M> to display more keys.

```
More keys for the SAS Topology display:

C = Clear Device Mappings for Non-Present Devices
R = Refresh SAS Topology
Enter = On a SAS Enclosure or Expander - Expand or Collapse Item
Enter = On a Disk Drive - Turn on the Locate LED (next key press turns off)
```

2.    Information about the volume and its member-disks are then displayed.

```
LSI Logic Config Utility         v6.16.00.00 (2007.05.07)
SAS Topology -- SAS1068

                    Device Identifier         Device

      ─ Bay 1        SEAGATE ST373454SS   0003  SAS
      ─ Bay 2       RAID Physical Disk        SAS
     └─ Bay 3       RAID Physical Disk        SAS
   └─ IS VOL         LSILOGICLogical Volume 3000

Esc=Exit    F1=Help
Alt+D=Device Properties    Alt+N=More Keys
```

## Selecting a boot disk

You can select a boot disk in the **SAS Topology** screen. This disk is then moved to scan ID 0 on the next boot, and remains at this position. This makes it easier to set BIOS boot device options and to keep the boot device constant during device additions and removals. There can be only one boot disk.

Follow these steps to select a boot disk:

1. In the **SAS BIOS CU**, select an adapter from the **Adapter List**.

2. Select the **SAS Topology** option.

    The current topology is displayed. If the selection of a boot device is supported, the bottom of the screen lists the **Alt+B** option. This is the key for toggling the boot device. If a device is currently configured as the boot device, the **Device Info** column on the **SAS Topology** screen will show the word **Boot**.

3. To select a boot disk, move the cursor to the disk and press **Alt+B**.

4. To remove the boot designator, move the cursor to the disk and press **Alt+B**. This controller will no longer have a disk designated as boot.

5. To change the boot disk, move the cursor to the new boot disk and press **Alt+B**. The boot designator will move to this disk.

---

The firmware must be configured correctly in order for the **Alt+B** feature to work.

This chapter provides instructions for installing the necessary drivers for different system components.

# Driver installation

6

# Chapter summary

6

# 6.1 RAID driver installation

After creating the RAID sets for your server system, you are now ready to install an operating system to the independent hard disk drive or bootable array. This part provides instructions on how to install the RAID controller drivers during OS installation.

## 6.1.1 Creating a RAID driver disk

You may have to use another system to create the RAID driver disk from the system/motherboard support CD or from the Internet.

A floppy disk with the RAID driver is required when installing Windows® 2000/2003 or Red Hat® Enterprise operating system on a hard disk drive that is included in a RAID set. You can create a RAID driver disk in DOS (using the Makedisk application in the support CD).

To create a RAID driver disk in DOS environment:

1.  Place the motherboard support CD in the optical drive.
2.  Restart the computer, then enter the BIOS Setup.
3.  Select the optical drive as the first boot priority to boot from the support CD. Save your changes, then exit the BIOS Setup.
4.  Restart the computer.
5.  Press any key when prompted to boot from CD.

```
Loading FreeDOS FAT KERNEL GO!
Press any key to boot from CDROM...
```

The Makedisk menu appears.

```
Create Driver Diskette Menu
INTEL 6321 MATRIX STORAGE MANAGER Driver
INTEL 6321 LSI MegaRAID Driver
LSI 1068 B1 SAS Driver
Marvell 88SE6145 SATA RAID Driver
Marvell 88SE6145 SATA Non-RAID Driver
ESB2 ASF Firmware update
FreeDOS command prompt
```

6.  Use the arrow keys to select the type of RAID driver disk you want to ceate and press <Enter> to enter the sub-menu.

**INTEL 6321 MATRIX STORAGE MANAGER Driver**

```
INTEL 6321 MATRIX STORAGE MANAGER Driver
Windows 32 bit(Also support AHCI)
Windows 64 bit(Also support AHCI)
Back
Exit
```

**INTEL 6321 LSI MegaRAID Driver**

```
INTEL 6321 LSI MegaRAID Driver
Windows 2000 Server
Windows Server 2003 32 bit
Windows Server 2003 64 bit
RHEL3 UP8 32/64 bit
RHEL4 UP5 32/64 bit
RHEL 5 32/64 bit
SLES 9.0 SP3 32 bit
SLES 9.0 SP3 64 bit
SLES 10 SP1 32 bit
SLES 10 SP1 64 bit
Back
Exit
```

**LSI 1068 B1 SAS Driver**

```

Windows 32/64 bit
Back
Exit
```
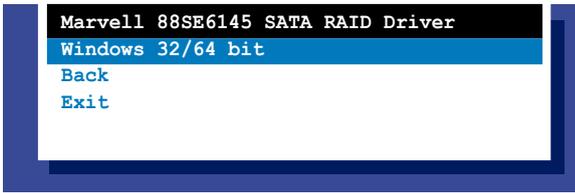

7.  Locate the RAID driver and place a blank, high-density floppy disk to the floppy disk drive.

8.  Press <Enter>.

9.  Follow screen instructions to create the driver disk.

To create a RAID driver disk in Windows® 2000/2003 Server environment:

1.   Restart the system from the hard disk drive, then place the system/ motherboard support CD in the optical drive.

2.   Browse the contents of the support CD to locate the driver disk utility. The Windows 32-bit OS RAID driver disk for the Intel® Matrix Storage Manager is located in:

    **\Drivers\6321 Matrix Storage Manager\F6 Install Floppy Create for 32 and 64 bit Windows\F6flpy32.exe**

The Windows 2003 64-bit OS RAID driver disk for the Intel® Matrix Storage Manager is located in:

    **\Drivers\6321 Matrix Storage Manager\F6 Install Floppy Create for 32 and 64 bit Windows\F6flpy64.exe**

The Windows 2000 32-bit RAID driver disk for the LSI Logic Embedded SATA RAID is located in:

    **\Drivers\6321 LSI MegaRAID\Driver\makedisk\win2k.exe** or **win2k.zip**

The Windows Server 2003 32-bit RAID driver disk for the LSI Logic Embedded SATA RAID is located in:

    **\Drivers\6321 LSI MegaRAID\Driver\makedisk\win2k3_x86.exe** or **win2k3_x86.zip**

The Windows Server 2003 64-bit RAID driver disk for the LSI Logic Embedded SATA RAID is located in:

    **\Drivers\6321 LSI MegaRAID\Driver\makedisk\win2k3_x64.exe** or **win2k3_x64.zip**

The Windows 2000 32-bit RAID driver disk for the LSI1068 SAS is located in:

    **\Drivers\LSI 1068 B1\Driver\makedisk\2k.exe**

The Windows Server 2003 32-bit RAID driver disk for the LSI1068 SAS is located in:

    **\Drivers\LSI 1068 B1\Driver\makedisk\2k3_32.exe**

The Windows Server 2003 64-bit OS RAID driver disk for the LSI1068 SAS controller is located in:

    **\Drivers\LSI 1068 B1\Driver\makedisk\2k3_64.exe**

The Windows Server 2003 32-bit/64-bit OS and Windows 2000 SP4 RAID driver disk for Marvell SATA controller is located in:

    **\Drivers\MARVELL 6145 SATA RAID\Driver\makedisk\mv6145.exe** or **mv6145.zip**

3.    Insert a formatted high-density floppy disk to the floppy disk drive.

4.    Follow screen instructions to complete the process.

5.    After creating a RAID driver disk, eject the floppy disk, then write-protect it to prevent computer virus infection.

To create a RAID driver disk in Red Hat® Enterprise Linux server environment:

1.    Insert a blank formatted high-density floppy disk to the floppy disk drive.

2.    Decompress the file into the floppy disk from the following path in the support CD:

For LSI Logic Embedded SATA RAID Driver:

    **\Drivers\6321 LSI MegaRAID\Driver\makedisk**

For LSI1068 SAS RAID Driver:

    **\Drivers\LSI 1068 B1\Driver\Makedisk**

For Marvell SATA RAID Driver:

    **\Drivers\MARVELL 6145 SATA RAID\Driver\Linux**

3.    Eject the floppy disk.

For systems with other Lunix versions that are not listed in the Makedisk menu, explore the support CD and copy the driver file from the following path: For LSI Logic Embedded SATA RAID Driver:\Drivers\6321 LSI MegaRAID\ Driver\Linux\; For LSI1068 SAS RAID Driver:\Drivers\LSI 1068 B1\Drivers\Linux\; For Marvell SATA RAID Driver:\Drivers\MARVELL 6145 SATA RAID\Driver\Linux.

## 6.1.2    Installing the RAID controller driver

**Windows® 2000/2003 Server OS**

When installing the LSI 1068 driver to your OS, make sure the driver you are installing supports your current installed OS. We STRONGLY RECOMMEND that you use the LSI 1068 SAS utility bundled in the support CD to create a driver disk. Refer to page 6-1 for more information.

During Windows® 2000/2003 Server OS installation

To install the RAID controller driver when installing Windows® 2000/2003 Server OS:

1.    Boot the computer using the Windows® 2000/2003 Server installation CD. The Windows® 2000/2003 Setup starts.

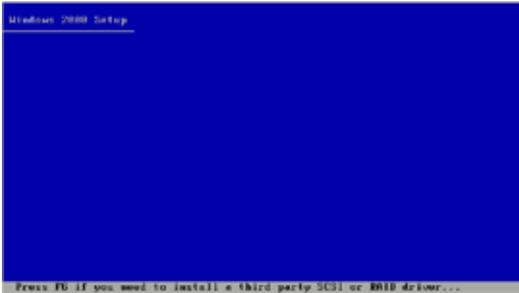

2.    Press <F6> when the message "Press F6 if you need to install a third party SCSI or RAID driver..." appears at the bottom of the screen.

3.    When prompted, press <S> to specify an additional device.
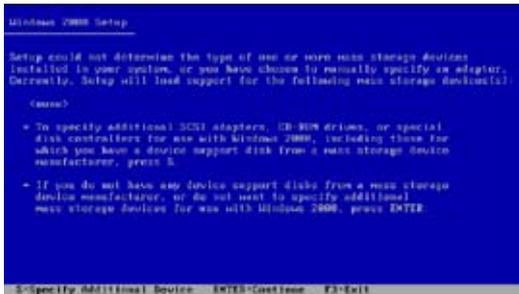

4. Insert the RAID driver disk you created earlier to the floppy disk drive, then press <Enter>.

5. Select the RAID controller driver from the list, then press <Enter>.

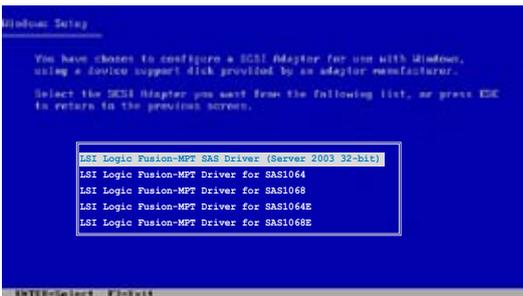

• **Intel® 6321ESB Intel® MATRIX STORAGE** driver:

  - If SATA RAID mode is to enabled, select **Intel ESB2 SATA RAID Controller (Server ESB2)**.

  - If SATA AHCI mode is enabled, select **Intel ESB2 SATA AHCI Controller (Server ESB2)**.

- **Intel® 6321ESB LSI Logic Embedded SATA RAID** driver (DSEB-DG model only):

    - For Windows 2000 OS, select **LSI MegaRAID Software RAID (Windows 2000 SP4)**.

    - For Windows 2003 OS, select **LSI MegaRAID Software RAID (Windows 2003)**.

- **LSI1068 PCI-X SAS controller** driver (DSEB-DG/ SAS model only):

    - For Windows 2000, select **LSI Logic Fusion-MPT Drivers for SAS1068** .

    - For 32bit Windows Server 2003, select **LSI Logic Fusion-MPT SAS Driver (Server 2003 32-bit)**.

- **Marvell SATA controller** driver (DSEB-DG model only):

    - For 32bit Windows Server 2003 and Windows 2000 SP4, select **Marvell 61XX SATA Controller 32bit Driver**.

    - For 64 bit Windows Server 2003, select **Marvell 61XX SATA Controller 64bit Driver**.

6.   The Windows® 2000/2003 Setup loads the RAID controller drivers from the RAID driver disk. When prompted, press <Enter> to continue installation.

7.   Setup then proceeds with the OS installation. Follow screen instructions to continue.

## To an existing Windows® 2000/2003 Server OS

To install the RAID controller driver on an existing Windows® 2000/2003 Server OS:

1.   Restart the computer, then log in with **Administrator** privileges.

2.   Windows® automatically detects the RAID controller and displays a **New Hardware Found** window. Click **Cancel**.

3.   Right-click the **My Computer** icon on the Windows® desktop , then select **Properties** from the menu.

4.   Click the **Hardware** tab, then click the **Device Manager** button to display the list of devices installed in the system.

5. Right-click the **RAID controller** item, then select **Properties**.

6. Click the **Driver** tab, then click the **Update Driver** button.

7. The **Upgrade Device Driver Wizard** window appears. Click **Next**.

8. Insert the RAID driver disk you created earlier to the floppy disk drive.

9. Select the option **Search for a suitable driver for my device (recommended)**, then click **Next**.

10. The wizard searches the RAID controller drivers. When found, click **Next** to install the drivers.

11. Click **Finish** after the driver installation is done.

To verify the RAID controller driver installation:

1. Right-click the **My Computer** icon on the Windows® desktop , then select **Properties** from the menu.

2. Click the **Hardware** tab, then click the **Device Manager** button.

3. Click the "+" sign before the item **SCSI and RAID controllers**, then the LSI Adapter, SAS 3000 series, 8-port with 1068-StorPort item should appear.

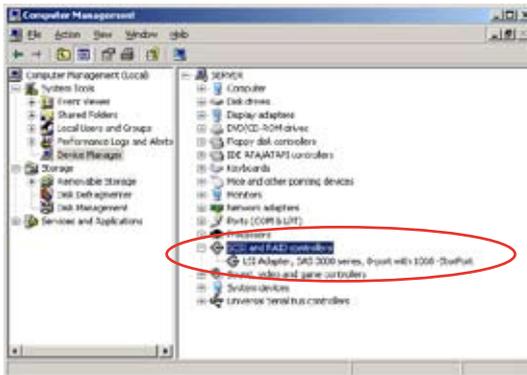

The screen differs based on the controller.

4. Right-click the **RAID controller** driver item, then select **Properties** from the menu.

5. Click the **Driver** tab, then click the **Driver Details** button to display the RAID controller drivers.

6. Click **OK** when finished.

## Red Hat® Enterprise

To install the Intel® 6321ESB LSI Logic Embedded SATA RAID controller driver when installing Red Hat® Enterprise OS:

1. Boot the system from the Red Hat® Installation CD.

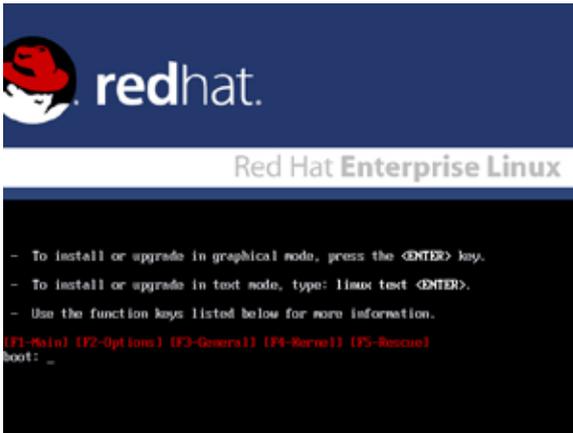

2. At the **boot:**, type **linux dd** , then press <Enter>.

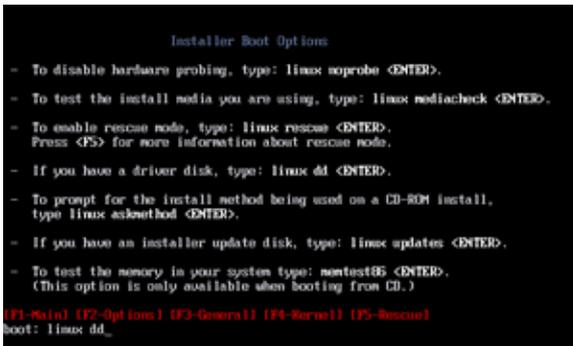

When installing a Red Hat 2.4 kernel with a Driver Update Disk (DUD) to a disk drive attached to a LSI HBA, use the command below at the install prompt:
**linux dd updates.**

3. Select **Yes** using the <Tab> key when asked if you have the driver disk. Press <Enter>

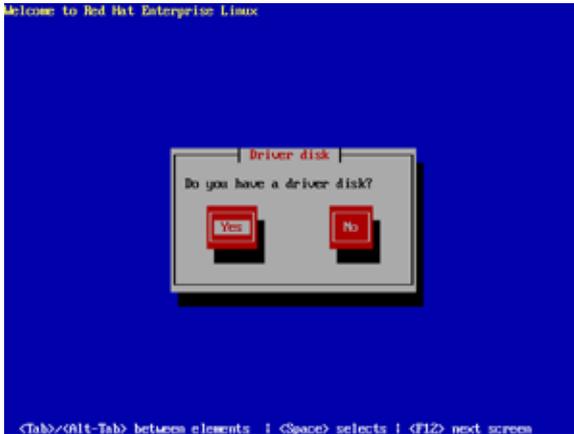

4. Select **fd0** using the <Tab> key when asked to select the driver disk source. Press <Tab> to move the cursor to **OK**, then press <Enter>.
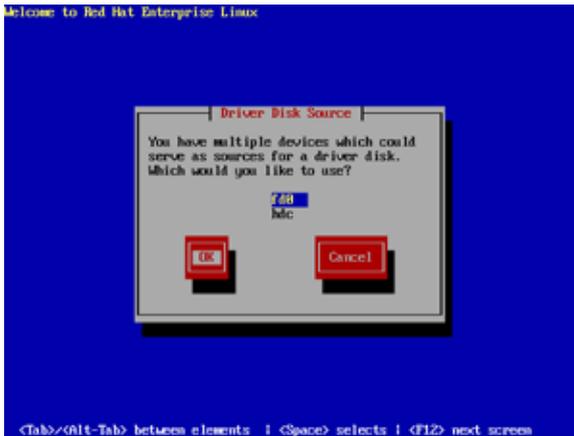

5.    When prompted, insert the Red Hat® Enterprise RAID driver disk to the floppy
      disk drive, select **OK**, then press <Enter>.

      The drivers for the RAID controller are installed to the system.

6.    Follow screen instructions to continue the OS installation.

# 6.2    Intel chipset software installation

This section provides instructions on how to install the Plug and Play components for the Intel® chipset on the system.

You need to manually install the Intel® chipset software on a Windows 2000 / Server 2003 operating system. To install the Intel® chipset software:

1.    Restart the computer, then log on with **Administrator** privileges.
2.    Insert the motherboard/system support CD to the optical drive. The support CD automatically displays the **Drivers** menu if Autorun is enabled in your computer.
3.    Click the item **Intel(R) Chipset Software Installation Utility** from the menu.
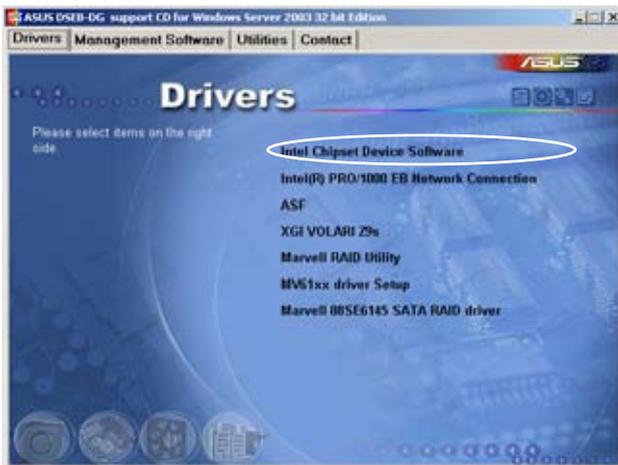

4.  The **Intel(R) Chipset Software Installation Utility** window appears. Follow the screen instructions to complete installation.

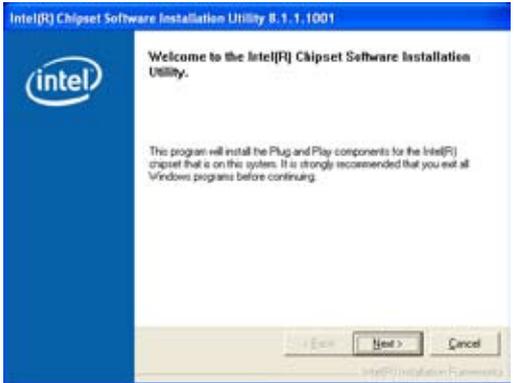

5.  Select **Yes** to accept the terms of the **License Agreement** and continue the process.
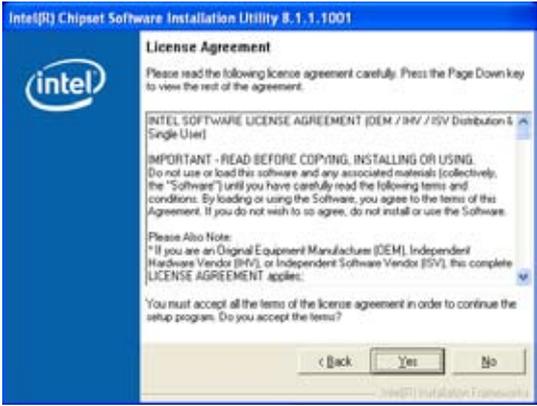

6. Read the **Readme File Information** and press **Next** to activate the installation.

7. After completing the installation, click **Finish** to restart the computer.

# 6.3    LAN driver installation

This section provides the instructions on how to install Intel® Gigabit LAN controller drivers.

## 6.3.1    Windows 2000/Server 2003

To install the Intel® Gigabit LAN controller driver on a Windows® 2000/ Server 2003 OS:

1.    Restart the computer, and then log on with **Administrator** privileges.

2.    Insert the motherboard/system support CD to the optical drive. The CD automatically displays the **Drivers** menu if Autorun is enabled in your computer.

- •    Windows® automatically detects the LAN controllers and displays window. Click **Cancel** to close this window.

- •    If **Autorun** is NOT enabled in your computer, browse the contents of the support CD to locate the file **AUTORUN.EXE** from the **\Drivers\Intel 82563EB** folder. Double-click the **AUTORUN.EXE** and follow step 4 to run the installation.

3.    Click the **Intel® PRO/1000 EB Network Connection** option.
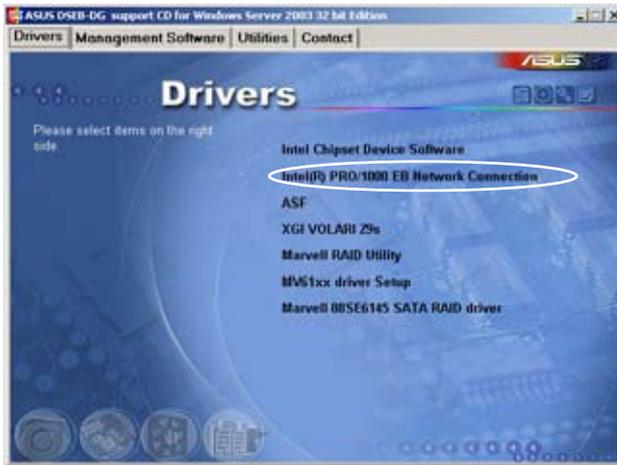

4.	Click the **Install Drivers** option to begin installation.

5.	Click **Next** button when the **Intel® PRO Network Connections – InstallShield Wizard** window appears.

6. Select **I accept the terms in the license agreement** and then click the **Next** button.

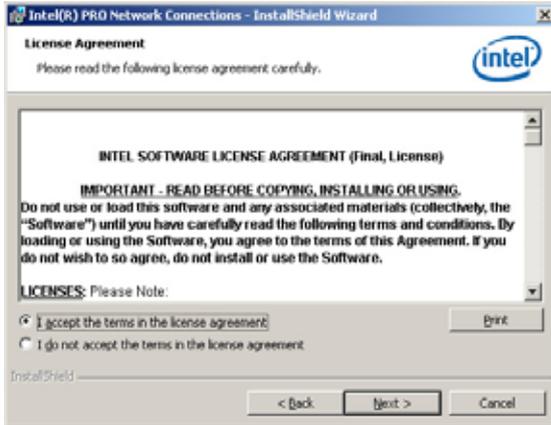

7. Press the **Complete** and click **Next** button to fully install the driver, Intel® PROSet for Windows Device Manager and Advanced Networking Services.

8. Follow the screen instructions to complete installation.

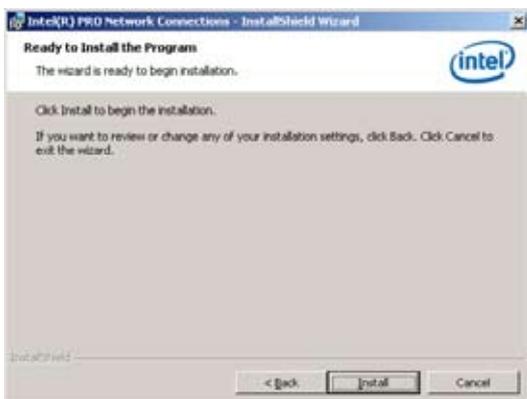

9. When finished, press **Finish** to continue.

To verify the LAN controller driver installation:

1.    Right-click the My Computer icon on the Windows® desktop , then select
      Properties from the menu.
2.    Click the Hardware tab, then click the Device Manager button.
3.    Click the "+" sign before the item Network adapters, then Intel(R) PRO/1000
      EB Network Connection with I/O Acceleration item should appear.
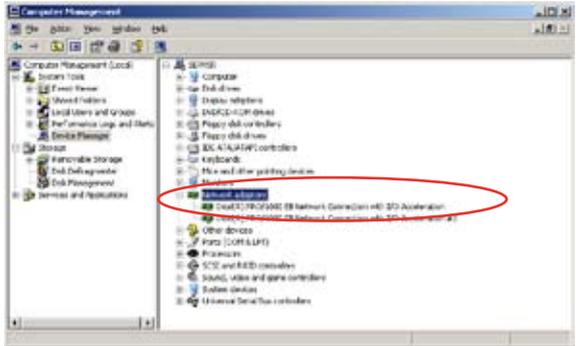

## 6.3.2    Red Hat

Follow these instructions when installing the Intel® LAN controller base driver for the in Red Hat® operating system.

### Before installing the LAN driver:

Before installing the LAN driver, you must install the kernel development application. To install the kernel development:

1.  Insert the Linux OS installation CD Disk 1 to the optical drive.
2.  Double click **Application >  System setting >  Add / Remove application**.
3.  Select **Kernel Development** from the **Development Tools**.
4.  Follow the later steps and add different CDs according to the instructions displayed.

### Building the driver from the TAR file:

1.  Insert the motherboard/system support CD to the optical drive and mount the optional drive in the Linux platform.
2.  Copy the base driver tar file from the motherboard/system support CD to the directory of your local hard disk. The name format of driver file is **e1000-<Version>.tar.gz**.

    For example: the file name of driver version 7.0.38 is **e1000-7.0.38.tar.gz**.

    •    The Intel® LAN driver for Linux OS is located in:

         **\Drivers\INTEL 82563EB\PRO1000\LINUX**

3.  Untar or unzip the archive.
    **tar zxf e1000-x.x.x.tar.gz**
4.  Change to the driver src directory.

    **cd e1000-x.x.x/src/**
5.  Use the command "makeinstall" to compile the driver module.

    **makeinstall**
6.  After reboot the system, please refer to Linux distribution documentation to configure the network protocol and IP address.

# 6.4    VGA driver installation

This section provides instructions on how to install the XGI Volari Z9s Video Graphics Adapter (VGA) driver.

## 6.4.1    Windows® 2000/Server 2003

You need to manually install the XGI Volari Z9s VGA driver on a Windows® 2000 / Server 2003 operating system. To install the XGI Volari Z9s VGA driver:

1.    Restart the computer, then log on with Administrator privileges.

2.    Insert the motherboard/system support CD to the optical drive. The support CD automatically displays the Drivers menu if Autorun is enabled in your computer.

      The **Drivers** menu if Autorun is enabled in your computer.

3.    The **XGI VGA Package** window appears, preparing the setup.
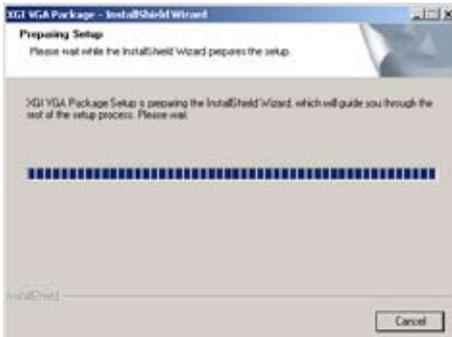

4. Click **Next** to start the installation.

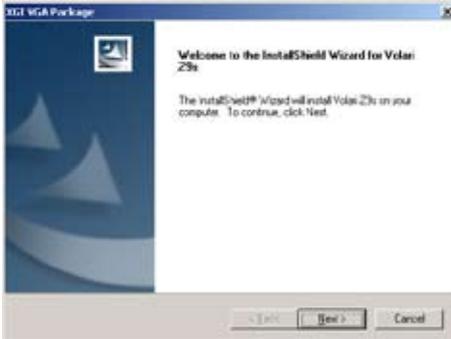

5. The system will update the VGA driver.
6. When the installation completes, click **Finish** to restart your computer before using the program.

# 6.5 Management applications and utilities installation

The support CD that came with the motherboard package contains the drivers, management applications, and utilities that you can install to avail all motherboard features.

> The contents of the support CD are subject to change at any time without notice. Visit the ASUS website (www.asus.com) for updates.

## 6.5.1 Running the support CD

Place the support CD to the optical drive. The CD automatically displays the Drivers menu if Autorun is enabled in your computer.

> If Autorun is NOT enabled in your computer, browse the contents of the support CD to locate the file ASSETUP.EXE from the BIN folder. Double-click the ASSETUP.EXE to run the CD.

## 6.5.2 Drivers menu

The Drivers menu shows the available device drivers if the system detects installed devices. Install the necessary drivers to activate the devices.

> The screen display and driver options vary under different operating system versions.

### 6.5.3    Management Software menu

The Management Software
menu displays the available
network and server monitoring
applications. Click an item to
install.

### 6.5.4    Utilities menu

The Utilities menu displays
the software applications and
utilities that the motherboard
supports. Click an item to
install.

### 6.5.5    Contact information

Click the Contact tab to
display the ASUS contact
information. You can also find
this information on the inside
front cover of this user guide.

This appendix includes additional information that you may refer to when configuring the motherboard.
