- 4 Dimm :
- A*: Supports one module inserted in any slot as Single-channel memory configuration
 - B*: Supports one pair of modules inserted into either the blue slots or the black slots as one pair of Dual-channel memory configuration
 - C*: Supports 4 modules inserted into both the blue and black slots as two pairs of Dual-channel memory configuration

- When installing total memory of 4GB capacity or more, Windows 32-bit operation system may only recognize less than 3GB. Hence, a total installed memory of less than 3GB is recommended.
- It is recommended to install the memory modules from the Orange slots for better overclocking capability.
- The default DIMM frequency depends on its Serial Presence Detect (SPD), which is the standard way of accessing information from a memory module. Under the default state, some memory modules for overclocking may operate at a lower frequency than the vendor-marked value.
- Ensure to install the DDR3 1600MHz DIMMs ONLY on the Orange slots!
