

Qualified Vendors List (QVL) for M4N68T PRO

Memory modules listed below are for reference only. Due to massive memory models on the market, we can only verify some of them.

下列表格中的記憶體模組僅供參考，因市面上的記憶體模組眾多，我們無法一一驗證。

4 Dimm :

- **A***: Supports **one module** inserted in any slot as Single-channel memory configuration
- **B***: Supports **one pair of modules** inserted into either the blue slots or the black slots as one pair of **Dual-channel** memory configuration
- **C***: Supports **4 modules** inserted into both the blue and black slots as two pairs of Dual-channel memory configuration

- When installing total memory of 4GB capacity or more, Windows 32-bit operation system may only recognize less than 3GB. Hence, a total installed memory of less than 3GB is recommended.
- It is recommended to install the memory modules on the blue slots for better overclocking capability.
- The default DIMM frequency depends on its Serial Presence Detect (SPD), which is the standard way of accessing information from a memory module. Under the default state, some memory modules for
